Risk and Reward Profile

The risk and reward indicator

The risk category was calculated using simulated performance data and may not be a reliable indicator of the fund's future risk profile.

The fund's risk category is not guaranteed to remain fixed and may change over time.

A fund in the lowest category does not mean a risk-free investment.

The fund is in this category because it can take higher risks in search of higher rewards and its price may rise and fall accordingly.

Risk factors

The following risks may affect fund performance.

Capital risk / distribution policy: the expenses of this share class are paid out of capital rather than out of investment income. Capital growth will be reduced and in periods of low growth capital erosion may occur.

Counterparty risk: The counterparty to a derivative or other contractual agreement or synthetic financial product could become unable to honour its commitments to the fund, potentially creating a partial or total loss for the fund.

Counterparty risk / money market & deposit: A failure of a deposit institution or an issuer of a money market instrument could create losses.

Currency risk: The fund can be exposed to different currencies. Changes in foreign exchange rates could create losses.

Currency risk / hedged share class: Changes in exchange rates will affect the returns on your investment. The aim of this British pound hedged share class is to provide you with the performance returns of the fund's investments by reducing the effects of exchange rate fluctuations between British pound and the fund's base currency US dollar.

Derivatives risk: A derivative may not perform as expected, and may create losses greater than the cost of the derivative.

Emerging markets & frontier risk: Emerging markets, and especially frontier markets, generally carry greater political, legal, counterparty and operational risk.

Equity risk: Equity prices fluctuate daily, based on many factors including general, economic, industry or company news.

Interest rate risk: A rise in interest rates generally causes bond prices to fall.

Liquidity risk: In difficult market conditions, the fund may not be able to sell a security for full value or at all. This could affect performance and could cause the fund to defer or suspend redemptions of its shares.

Operational risk: Failures at service providers could lead to disruptions of fund operations or losses.
