PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
CONTEMPORARY AMPEREX TECHN-A XSHE CNY	Manufacture of electrical equipment	3.54%	CN
KWEICHOW MOUTAI CO LTD-A XSHG CNY	Manufacture of beverages	3.37%	CN
CHINA MERCHANTS BANK-A XSHG CNY	Financial service activities, except insurance and pension funding	2.22%	CN
MIDEA GROUP CO LTD-A XSHE CNY	Manufacture of electrical equipment	2.21%	CN
PING AN INSURANCE GROUP CO-A XSHG CNY	Insurance, reinsurance and pension funding, except compulsory social security	2.11%	CN
ZIJIN MINING GROUP CO LTD-A XSHG CNY	Mining of metal ores	1.7%	CN
INDUSTRIAL BANK CO LTD -A XSHG CNY	Financial service activities, except insurance and pension funding	1.55%	CN
BYD CO LTD -A XSHE CNY	Manufacture of motor vehicles, trailers and semi-trailers	1.45%	CN

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Manufacture of computer, electronic and optical products	16.76%
Financial service activities, except insurance and pension funding	13.25%
Manufacture of electrical equipment	11.89%
Manufacture of beverages	7.61%
Activities auxiliary to financial services and insurance activities	5.56%

Manufacture of motor vehicles, trailers and semi-trailers	4.81%
Mining of metal ores	4.57%
Insurance, reinsurance and pension funding, except compulsory social security	4.24%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.45%
Manufacture of machinery and equipment n.e.c.	3.35%
Manufacture of chemicals and chemical products	3.32%
Electricity, gas, steam and air conditioning supply	2.55%
Publishing activities	2.18%
Manufacture of food products	2%
Human health activities	1.49%
Water transport	1.45%
Wholesale trade, except of motor vehicles and motorcycles	1%
Civil engineering	0.98%
Mining support service activities	0.98%
Real estate activities	0.88%
Other manufacturing	0.78%
Manufacture of other transport equipment	0.7%
Construction of buildings	0.61%
Manufacture of rubber and plastic products	0.56%
Crop and animal production, hunting and related service activities	0.56%
Other	0.55%
Manufacture of other non-metallic mineral products	0.52%
Scientific research and development	0.47%
Air transport	0.43%
Extraction of crude petroleum and natural gas	0.42%
Manufacture of basic metals	0.42%
Postal and courier activities	0.39%
Computer programming, consultancy and related activities	0.34%
Information service activities	0.27%
Warehousing and support activities for transportation	0.24%
Retail trade, except of motor vehicles and motorcycles	0.21%
Waste collection, treatment and disposal activities, materials recovery	0.19%
Manufacture of furniture	0.03%
Manufacture of leather and related products	0.01%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments		
	2025	2024
Revenue-based	0.00%	0.00%
CapEx-based	0.00%	0.00%
OpEx-based	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 6.17% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

- **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 7.94% of sustainable investments with a social objective.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.55% of the Financial Product’s Net Asset Value.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

- **How did this financial product perform compared to the reference benchmark?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Clean Energy (the “Financial Product”)

Legal Entity Identifier: 213800YSFEN3TI97J121

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective : 61.19%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective : 36.96%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Renewable Energy Production
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Renewable Energy Production	28,30 of megawatt hours of renewable energy produced per million euros invested using the EVIC	8,92 of megawatt hours of renewable energy produced per million euros invested using the EVIC	100 %
Women on Board	34,73 % of women on board (for corporates only)	34,20 % of women on board (for corporates only)	99,99 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Renewable Energy Production	2024	83.26 of megawatt hours of renewable energy produced per million euros invested using the EVIC	29.63 of megawatt hours of renewable energy produced per million euros invested using the EVIC	92.74 %
Women on Board	2024	33.53 % of women on board (for corporates only)	33.99 % of women on board (for corporates only)	99.14 %
Renewable Energy Production	2023	94.14 of megawatt hours of renewable energy produced per million euros invested using the EVIC		
% of companies in the GSS Watchlist & Non-compliant	2023	7.18 % of invested companies in the GSS Watchlist & Non-compliant	10.67 % of invested companies in the GSS Watchlist & Non-compliant	97.03 %
Carbon Delta Technology Opportunity (1.5C)	2022	24.65 % of the invested companys market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable General Equilibrium (AIM/CGE) model	4.27 % of the invested companys market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable General Equilibrium (AIM/CGE) model	97.96 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score

is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM's exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 3: GHG intensity of investee companies
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of our exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark. The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund invest in companies that are deemed impactful through the implementation of an Impact analysis.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	4.45%	US
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	3.74%	FR
AUTODESK INC XNGS USD	Publishing activities	3.59%	US
MICROSOFT CORP XNGS USD	Publishing activities	3.55%	US
TAIWAN SEMICONDUCTOR-SP ADR XNYS USD	Manufacture of machinery and equipment n.e.c.	3.47%	TW
QUANTA SERVICES INC XNYS USD	Civil engineering	3.41%	US
S&P GLOBAL INC XNYS USD	Information service activities	3.34%	US
MUENCHENER RUECKVER AG-REG XETR EUR	Insurance, reinsurance and pension funding, except compulsory social security	3.33%	DE
WASTE MANAGEMENT INC XNYS USD	Waste collection, treatment and disposal activities, materials recovery	3.25%	US
INFINEON TECHNOLOGIES AG XETR EUR	Manufacture of computer, electronic and optical products	3.2%	DE
LINDE PLC XNGS USD	Manufacture of chemicals and chemical products	3.17%	US
IBERDROLA SA XMAD EUR	Electricity, gas, steam and air conditioning supply	3.13%	ES
TRANE TECHNOLOGIES PLC XNYS USD	Manufacture of machinery and equipment n.e.c.	3.08%	IE
NATIONAL GRID PLC XLON GBP	Electricity, gas, steam and air conditioning supply	2.97%	GB
REPUBLIC SERVICES INC XNYS USD	Waste collection, treatment and disposal activities, materials recovery	2.84%	US

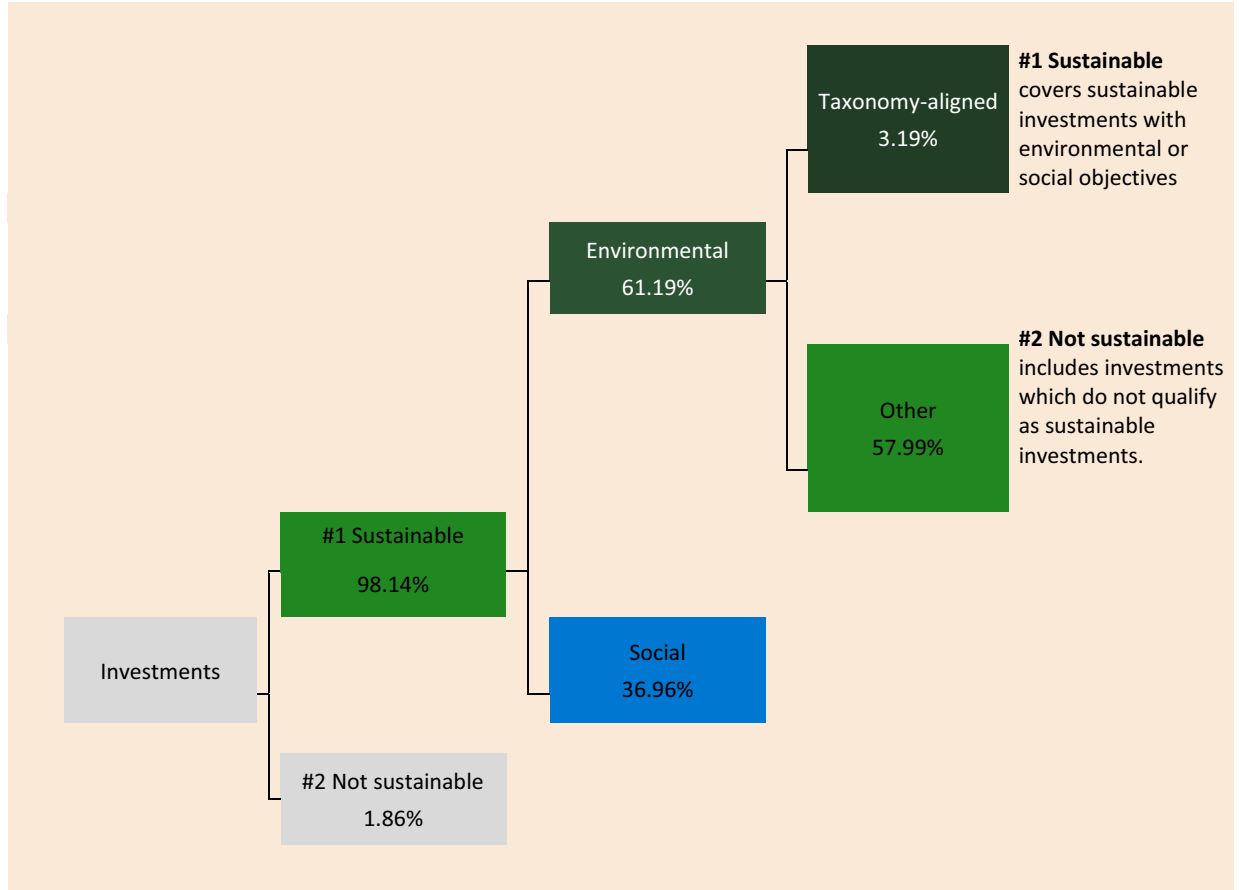

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Publishing activities	15.66%
Manufacture of computer, electronic and optical products	13.65%
Manufacture of machinery and equipment n.e.c.	12.12%
Electricity, gas, steam and air conditioning supply	8.67%
Manufacture of electrical equipment	7.78%
Waste collection, treatment and disposal activities, materials recovery	6.09%
Manufacture of chemicals and chemical products	5.77%
Civil engineering	4.2%
Computer programming, consultancy and related activities	3.97%
Information service activities	3.34%
Insurance, reinsurance and pension funding, except compulsory social security	3.33%

Real estate activities	2.78%
Other	2.73%
Architectural and engineering activities, technical testing and analysis	2.58%
Manufacture of fabricated metal products, except machinery and equipment	2.54%
Repair and installation of machinery and equipment	2.49%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	1.14%
Land transport and transport via pipelines	0.65%
Construction of buildings	0.5%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	3.19%	4.35%	0.00%	0.00%
CapEx-based	8.31%	7.02%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 57.99% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 36.96 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 1.86% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product’s investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Defensive European Equity (the “Financial Product”)

Legal Entity Identifier: 2138007M8IXUD7LJXM53

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="checkbox"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 72.5 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product also used the ESG Benchmark MSCI Europe Climate Paris Aligned PAB Index as a reference benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Investment Universe	Coverage
ESG Score	8.38 / 10	7.94 / 10	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Not applicable.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG

(on a scale from + 10 corresponding to 'significant contributing impact' to - 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	90	100
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	16.84 %	90	100
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	9.69%	90	100
SDG no significantly negative score	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	38.97	90	100
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	29	31

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 3 Relative number: 3	Absolute number: 75 Relative number: 75

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society,

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 120.382 Scope 2: 79.891 Scope 3: 5219.285 Scope 1+2: 200.273 Scope 1+2+3: 5387.031	Scope 1: 90 Scope 2: 90 Scope 3: 77 Scope 1+2: 90 Scope 1+2+3: 77	Scope 1: 100 Scope 2: 100 Scope 3: 86 Scope 1+2: 100 Scope 1+2+3: 86
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 8.737 Scope 1+2+3: 254.182	Scope 1+2: 47 Scope 1+2+3: 77	Scope 1+2: 50 Scope 1+2+3: 86
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1123.689	Scope 1+2+3: 77	Scope 1+2+3: 86
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	0.0	90	100
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	29.33	83	92
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	90	100
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	29	31

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international	Absolute number: 0 Relative number: 0	Absolute number: 3 Relative number: 3	Absolute number: 75 Relative number: 75

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

international and EU sanctions		treaties and conventions, United Nations principles and, where applicable, national law

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
HENKEL AG & CO KGAA VOR-PREF XETR EUR	Manufacture of chemicals and chemical products	6.73%	DE
MUENCHENER RUECKVER AG-REG XETR EUR	Insurance, reinsurance and pension funding, except compulsory social security	6.26%	DE
RHEINMETALL AG XETR EUR	Manufacture of other transport equipment	5.05%	DE
SAP SE XETR EUR	Publishing activities	4.45%	DE
SIEMENS AG-REG XETR EUR	Manufacture of electrical equipment	4.06%	DE
ALLIANZ SE-REG XETR EUR	Insurance, reinsurance and pension funding, except compulsory social security	3.76%	DE
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	3.61%	NL
INFINEON TECHNOLOGIES AG XETR EUR	Manufacture of computer, electronic and optical products	3.42%	DE
SAMPO OYJ-A SHS XHEL EUR	Insurance, reinsurance and pension funding, except compulsory social security	3.39%	FI
ING GROEP NV XAMS EUR	Financial service activities, except insurance and pension funding	3.36%	NL
ZALANDO SE XETR EUR	Retail trade, except of motor vehicles and motorcycles	3.25%	DE
DEUTSCHE BANK AG-REGISTERED XETR EUR	Financial service activities, except insurance and pension funding	3.12%	DE
MERCK KGAA XETR EUR	Scientific research and development	3.06%	DE
KBC GROUP NV XBRU EUR	Financial service activities, except insurance and pension funding	2.93%	BE
ARGENX SE XBRU EUR	Scientific research and development	2.84%	NL

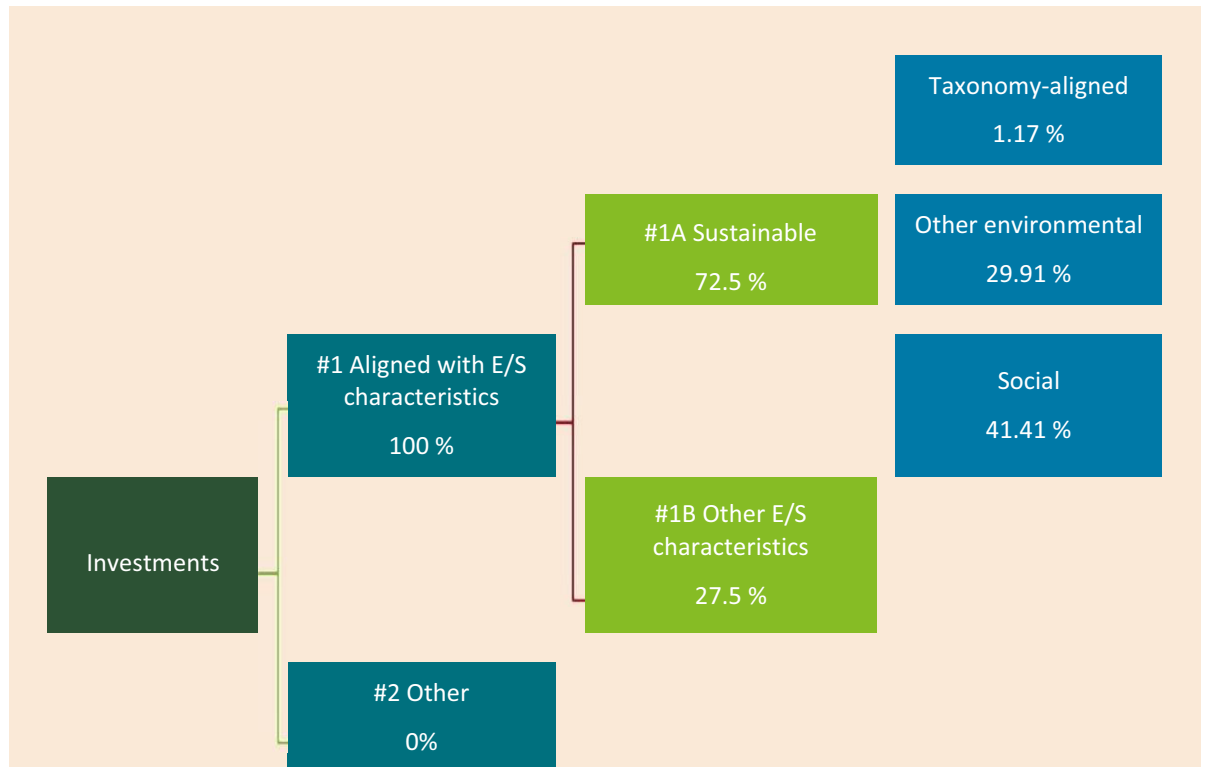

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Insurance, reinsurance and pension funding, except compulsory social security	17.43%
Financial service activities, except insurance and pension funding	11.31%
Manufacture of chemicals and chemical products	6.73%
Manufacture of other transport equipment	6.03%
Scientific research and development	5.9%

Publishing activities	5.43%
Manufacture of computer, electronic and optical products	5.26%
Retail trade, except of motor vehicles and motorcycles	4.29%
Manufacture of machinery and equipment n.e.c.	4.24%
Manufacture of electrical equipment	4.06%
Manufacture of motor vehicles, trailers and semi-trailers	3.85%
Manufacture of beverages	3.49%
Other	3.49%
Information service activities	3.23%
Public administration and defence, compulsory social security	2.81%
Manufacture of wearing apparel	2.79%
Activities auxiliary to financial services and insurance activities	2.72%
Postal and courier activities	2.36%
Other manufacturing	2.19%
Manufacture of paper and paper products	0.98%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.8%
Legal and accounting activities	0.6%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

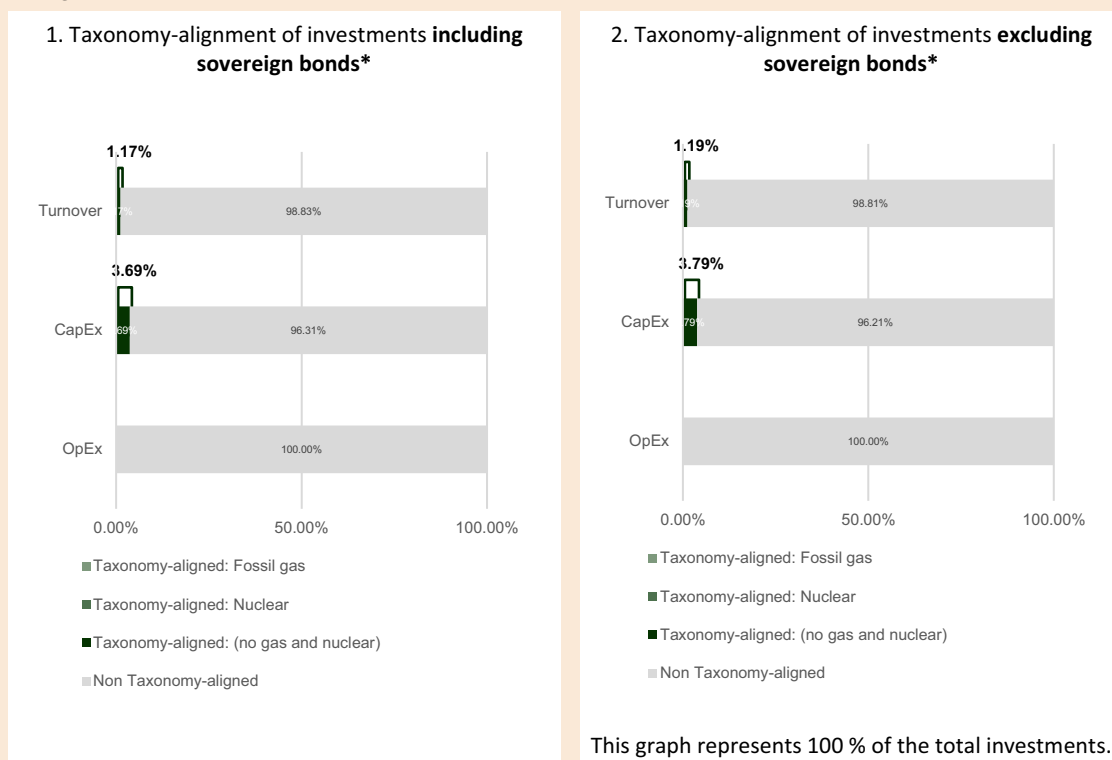

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 29.91% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 41.41% of sustainable investments with a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The "other" assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social

characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

The Financial Product has designated the MSCI Europe Climate Paris Aligned PAB Index as its reference benchmark to meet its environmental and social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did the reference benchmark differ from a broad market index?

The Index is the MSCI Europe Climate Paris Aligned PAB Index. The Index is a net return index, meaning that the Index reflects the performance of its constituents including reinvestment of any dividends, interest and other income after the deduction of any tax from such dividends, interest and other income.

The eligible universe of the Index is constructed from the constituents of the Parent Index by excluding securities based on the exclusion criteria listed below:

1. Controversial weapons;
2. ESG controversies;
3. Tobacco;
4. Environmental harm;
5. Thermal Coal mining;
6. Oil & gas;
7. Power generation
8. Civilian firearms; and
9. Nuclear weapons.

Then, at each rebalancing, the Index is constructed using an optimization process defined in the Index methodology that aims to:

- Exceed the minimum technical requirements laid out in the EU Delegated Regulation 2020/1818 of 17 July 2020 supplementing Regulation (EU) 2016/1011 of the European Parliament and of the Council as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks;
- Align with the recommendations of the TCFD;
- Align with a 1.5°C climate scenario using the MSCI climate value-at-risk and a “self-decarbonization” rate of 10% year on year;
- Reduce the Index’s exposure to physical risk arising from extreme weather events by at least 50%;
- Shift index weight from companies facing climate transition risks to companies having climate transition opportunities, using the MSCI low carbon transition score, and by excluding categories of fossil fuel-linked companies;
- Increase the weight of companies which are exposed to climate transition opportunities and reduce the weight of companies which are exposed to climate transition risks;
- Reduce the weight of companies assessed as high carbon emitters using scope 1, 2 and 3 emissions;
- Increase the weight of companies with credible carbon reduction targets through the weighting scheme; and
- Achieve a modest tracking error compared to the parent index and low turnover.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The Sub-Fund promotes environmental and/or social characteristics by investing in and getting exposure to securities that have implemented good practices in terms of managing their environmental impacts, governance and social (“ESG”) practices.

By applying a 2-step approach:

1. Defining the eligible universe after application of an exclusion filter, as described in AXA IM’s Sectorial Exclusion and ESG Standards Policies, followed by a second filter, building its investment universe based on the components of the Benchmark, excluding the worst securities based on their ESG scores;
2. Swap of the performance of the selected securities against the performance of the Benchmark overlayed by the derivative instrument overlay strategy

the fund aims to have a better ESG score than the broad benchmark index (MSCI World). At the end of 31.12.2025, the ESG score of the portfolio is 8.8 (versus 7.8 for index) , carbon intensity is lower (14% versus 83%), implied temperature rise is below index (1.6 versus 2.2) as well as water intensity.

● **How did this financial product perform compared with the reference benchmark?**

Sustainability KPI Name	Value	Investment Universe	Coverage
ESG Score	8.38 / 10	7.94 / 10	100 %

● **How did this financial product perform compared with the broad market index?**

Not applicable or available.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Defensive Optimal Income (the “Financial Product”)

Legal Entity Identifier: 2138007QLQUSNAEZDQ61

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 54.67 % of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.92 / 10	6.29 / 10	98.9 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	7.17 / 10	6.28 / 10	99 %
ESG Score	2023	7.43 / 10	6.28 / 10	98.89 %
ESG Score	2022	7.33 / 10	6.15 / 10	98.7 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 4720.602 Scope 2: 1121.691 Scope 3: 135388.797 Scope 1+2: 5842.292 Scope 1+2+3: 140683.031	Scope 1: 80 Scope 2: 80 Scope 3: 69 Scope 1+2: 80 Scope 1+2+3: 69	Scope 1: 92 Scope 2: 92 Scope 3: 78 Scope 1+2: 92 Scope 1+2+3: 78

	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 2295.309	Scope 1+2+3: 57	Scope 1+2+3: 65
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	7.12	80	92
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 52.97 Energy Production: 74.13	Energy Consumption: 68 Energy Production: 4	Energy Consumption: 79 Energy Production: 4
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector (GWh/€M)	Sector NACE B: 0.15 Sector NACE C: 0.246 Sector NACE D: 1.546 Sector NACE E: 1.036 Sector NACE F: 0.045 Sector NACE G: 0.049 Sector NACE H: 0.319 Sector NACE L: 0.393	Sector NACE A: 0 Sector NACE B: 0 Sector NACE C: 16 Sector NACE D: 4 Sector NACE E: 1 Sector NACE F: 0 Sector NACE G: 5 Sector NACE H: 3 Sector NACE L: 10	Sector NACE B: 0 Sector NACE C: 19 Sector NACE D: 4 Sector NACE E: 1 Sector NACE F: 0 Sector NACE G: 6 Sector NACE H: 4 Sector NACE L: 11
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	28.5	76	87
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested,	0.014	19	22

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

		expressed as a weighted average (t/€M)			
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	0.725	38	43

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	84	97
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	21.54 %	76	88
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	15.35%	77	88
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	36.54	69	80
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	23	29

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 3 Relative number: 3	Absolute number: 99 Relative number: 99

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 4720.602	Scope 1: 80	Scope 1: 92
Ecosystem protection & Deforestation policy			Scope 2: 1121.691	Scope 2: 80	Scope 2: 92
			Scope 3: 135388.797	Scope 3: 69	Scope 3: 78
			Scope 1+2: 5842.292	Scope 1+2: 80	Scope 1+2: 92
			Scope 1+2+3: 140683.031	Scope 1+2+3: 69	Scope 1+2+3: 78
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 58.46	Scope 1+2: 40	Scope 1+2: 47
Ecosystem protection & Deforestation policy			Scope 1+2+3: 952.062	Scope 1+2+3: 69	Scope 1+2+3: 78
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 2295.309	Scope 1+2+3: 57	Scope 1+2+3: 65
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	7.12	80	92
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 52.97 Energy Production: 74.13	Energy Consumption: 68 Energy Production: 4	Energy Consumption: 79 Energy Production: 4
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	28.5	76	87

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	84	97
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	36.54	69	80
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	23	29

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
ISHARES PHYSICAL GOLD ETC	Financial service activities, except insurance and pension funding	7.02%	IE
AXA WF US High Yield Bonds M Capitalisation USD	Financial service activities, except insurance and pension funding	5.72%	LU
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	2.03%	US
SIEMENS ENERGY AG XETR EUR	Manufacture of electrical equipment	1.76%	DE
ALPHABET INC-CL C XNGS USD	Information service activities	1.75%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	1.67%	US
ALIBABA GROUP HOLDING-SP ADR XNYS USD	Retail trade, except of motor vehicles and motorcycles	1.5%	HK

Portfolio 256 USD IMN GSI	Other	0.87%	N/A

The portfolio proportions of investments presented above are an average over the reference period.

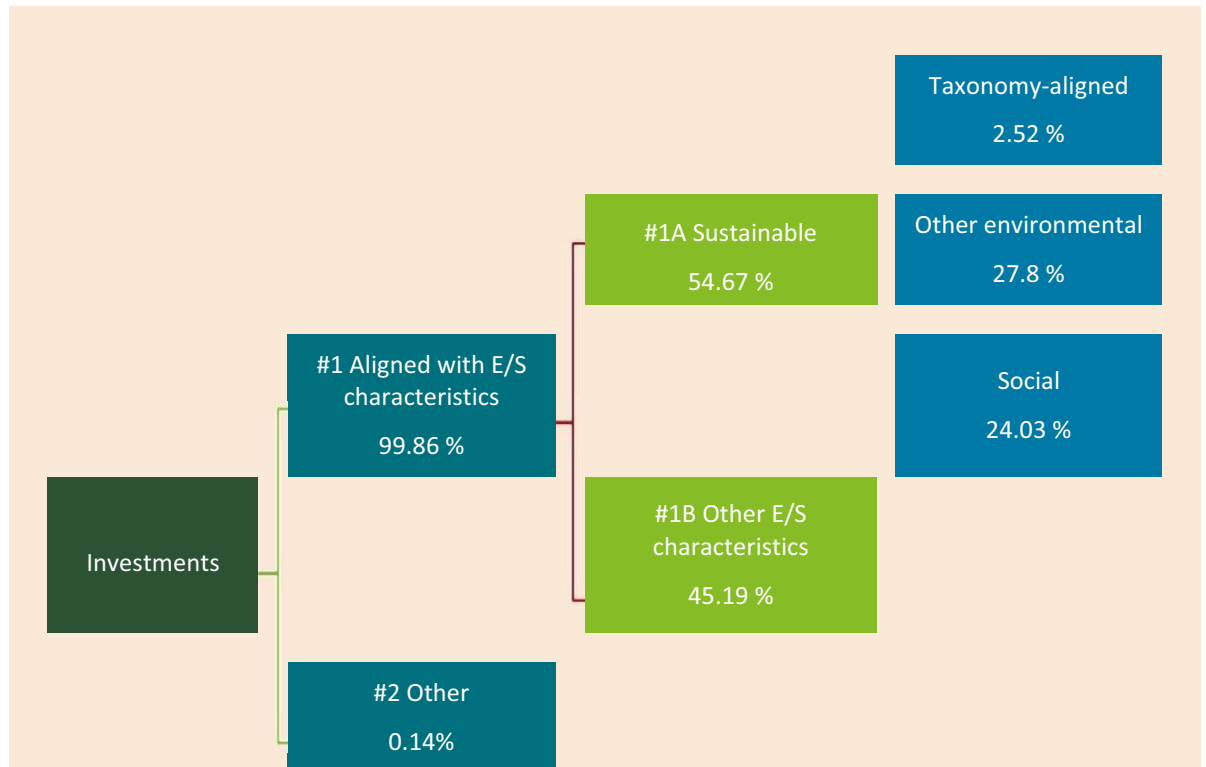

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	31.43%
Manufacture of computer, electronic and optical products	5.52%
Electricity, gas, steam and air conditioning supply	5.35%
Real estate activities	4.9%
Retail trade, except of motor vehicles and motorcycles	4.77%

Information service activities	4.21%
Insurance, reinsurance and pension funding, except compulsory social security	4.18%
Manufacture of electrical equipment	3.98%
Telecommunications	3.78%
Other	3.44%
Manufacture of machinery and equipment n.e.c.	3.37%
Manufacture of chemicals and chemical products	2.53%
Activities auxiliary to financial services and insurance activities	2.4%
Publishing activities	2.34%
Manufacture of motor vehicles, trailers and semi-trailers	2.09%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.82%
Warehousing and support activities for transportation	1.7%
Manufacture of coke and refined petroleum products	1.38%
Land transport and transport via pipelines	1.32%
Public administration and defence, compulsory social security	1.18%
Water collection, treatment and supply	0.77%
Other manufacturing	0.65%
Civil engineering	0.65%
Air transport	0.45%
Manufacture of paper and paper products	0.44%
Manufacture of fabricated metal products, except machinery and equipment	0.36%
Scientific research and development	0.34%
Advertising and market research	0.3%
Manufacture of basic metals	0.28%
Human health activities	0.28%
Wholesale trade, except of motor vehicles and motorcycles	0.27%
Manufacture of other transport equipment	0.27%
Services to buildings and landscape activities	0.26%
Extraction of crude petroleum and natural gas	0.25%
Food and beverage service activities	0.23%
Manufacture of food products	0.22%
Repair and installation of machinery and equipment	0.22%
Manufacture of wearing apparel	0.21%
Computer programming, consultancy and related activities	0.21%
Water transport	0.17%
Rental and leasing activities	0.16%
Manufacture of beverages	0.14%
Security and investigation activities	0.14%
Gambling and betting activities	0.12%
Other personal service activities	0.11%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.09%
Manufacture of leather and related products	0.09%
Waste collection, treatment and disposal activities, materials recovery	0.09%
Office administrative, office support and other business support activities	0.07%
Accommodation	0.07%
Manufacture of other non-metallic mineral products	0.07%
Legal and accounting activities	0.06%

Programming and broadcasting activities	0.06%
Motion picture, video and television programme production, sound recording and music publishing activity	0.03%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	0.03%
Mining of metal ores	0.03%
Printing and reproduction of recorded media	0.03%
Manufacture of rubber and plastic products	0.03%
Sports activities and amusement and recreation activities	0.02%
Construction of buildings	0.02%
Mining support service activities	0.02%
Travel agency, tour operator reservation service and related activities	0.01%
Creative, arts and entertainment activities	0.01%
Architectural and engineering activities, technical testing and analysis	0.01%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	2.52%	4.19%	0.00%	0.00%
CapEx-based	5.43%	4.58%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 27.8% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 24.03% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0.14% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Digital Economy (the “Financial Product”)

Legal Entity Identifier: 213800YT909E4S3MZV07

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective:** ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective:** ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 55.08 % of sustainable investments
- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human rights violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	28.96 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	128.72 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	83.15 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	33.73 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	160.96 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	99.91 %
Carbon intensity	2023	32.67 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	173.19 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.55 %
Water Intensity	2023	130.65 Thousands of cubic meters for corporates	5549.86 Thousands of cubic meters for corporates	99.55 %
Carbon intensity	2022	33.95 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	238.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.41 %
Water intensity	2022	189.61 Thousands of cubic meters for corporates	11618.89 Thousands of cubic meters for corporates	99.41 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 463.779	Scope 1: 97	Scope 1: 100
Ecosystem protection & Deforestation policy			Scope 2: 799.649	Scope 2: 97	Scope 2: 100
			Scope 3: 9431.9	Scope 3: 84	Scope 3: 86
			Scope 1+2: 1263.429	Scope 1+2: 97	Scope 1+2: 100
			Scope 1+2+3: 10340.698	Scope 1+2+3: 84	Scope 1+2+3: 86
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 3.381	Scope 1+2: 48	Scope 1+2: 50
Ecosystem protection & Deforestation policy			Scope 1+2+3: 22.387	Scope 1+2+3: 84	Scope 1+2+3: 86
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 191.043	Scope 1+2+3: 84	Scope 1+2+3: 86
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	0.0	97	100
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 35.98	Energy Consumption: 89 Energy Production: 0	Energy Consumption: 92
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	10.23	96	99

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	97	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	31.93	97	100
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	26	27

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
ALPHABET INC-CL C XNGS USD	Information service activities	5.56%	US
MICROSOFT CORP XNGS USD	Publishing activities	5.19%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	4.9%	US
NETFLIX INC XNGS USD	Motion picture, video and television programme production, sound recording and music publishing activity	4.81%	US
SPOTIFY TECHNOLOGY SA XNYS USD	Information service activities	4.81%	SE
SERVICENOW INC XNYS USD	Publishing activities	3.98%	US
META PLATFORMS INC-CLASS A XNGS USD	Information service activities	3.97%	US
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	3.89%	US
BOOKING HOLDINGS INC XNGS USD	Information service activities	2.94%	US
SHOPIFY INC - CLASS A XNGS USD	Publishing activities	2.89%	CA
Portfolio USD SET SSX	Other	2.62%	N/A
TRIP.COM GROUP LTD XHKG HKD	Information service activities	2.48%	SG
UBER TECHNOLOGIES INC XNYS USD	Information service activities	2.43%	US
APPLOVIN CORP-CLASS A XNGS USD	Publishing activities	2.14%	US
CADENCE DESIGN SYS INC XNGS USD	Publishing activities	2.11%	US

The portfolio proportions of investments presented above are an average over the reference period.

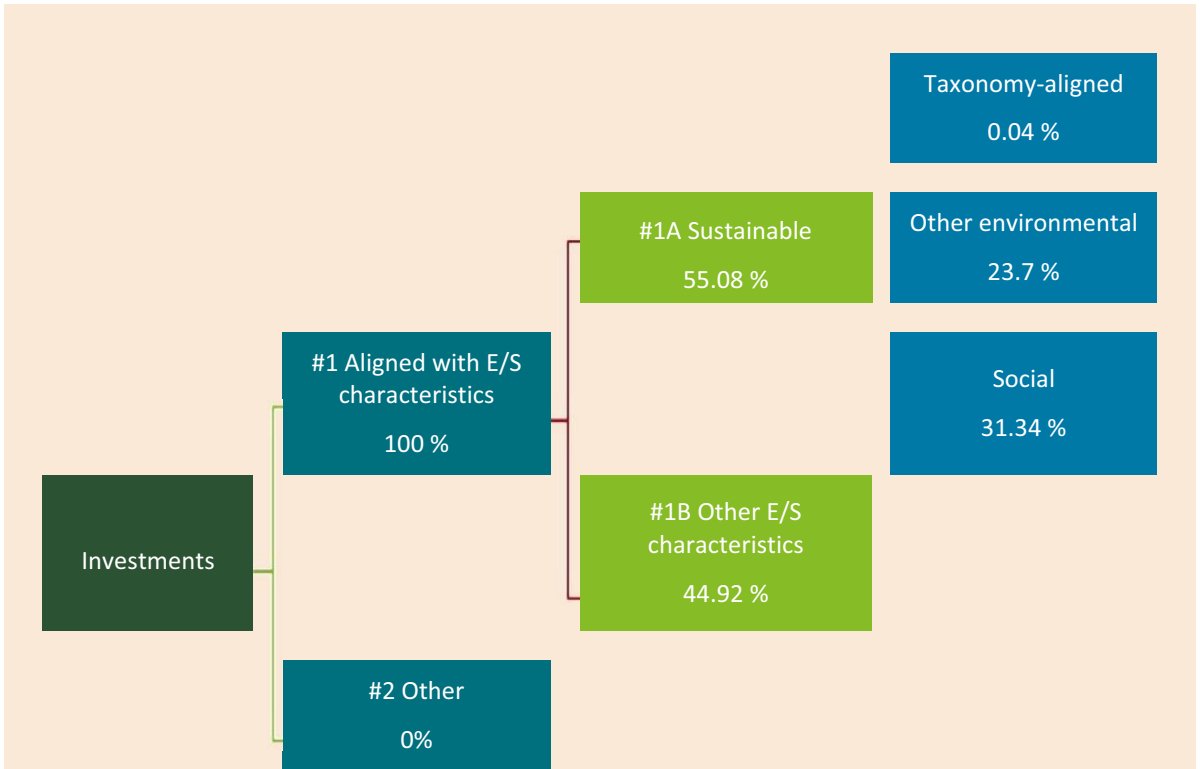

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Publishing activities	43.01%
Information service activities	24.62%
Retail trade, except of motor vehicles and motorcycles	9.24%
Manufacture of computer, electronic and optical products	6.28%
Activities auxiliary to financial services and insurance activities	5.34%

Motion picture, video and television programme production, sound recording and music publishing activity	4.81%
Other	2.53%
Real estate activities	1.97%
Computer programming, consultancy and related activities	1.55%
Security and investigation activities	0.33%
Postal and courier activities	0.31%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

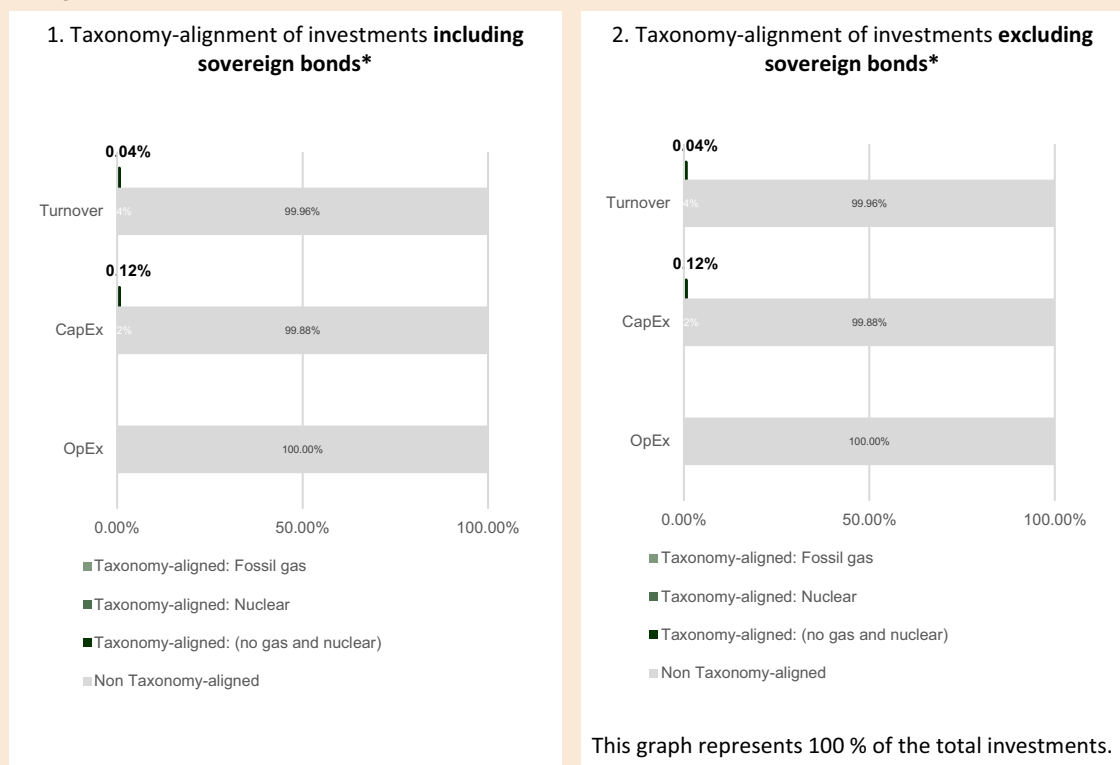

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.04%	0.13%	0.00%	0.00%
CapEx-based	0.12%	0.32%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 23.7% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 31.34% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

Through the year, the Financial Product has removed its adherence to the French Label ISR as well as its SRI strategy and as described in the relative SFDR Annex of the prospectus of the Financial Product.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product Name: AXA World Funds Emerging Markets Responsible Equity QI (the “Financial Product”)

Legal Entity Identifier: 213800UAPEX4GSMEI340

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="radio"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 47.77 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product uses an 'extra-financial indicator improvement' approach, and outperformed Carbon Intensity by at least 20% compared to its Benchmark MSCI Emerging Markets Net Total Return USD Index during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	124.4 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	280.27 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	83.15 %
Water Intensity	20839.13 Thousands of cubic meters per million \$ of revenue (for corporates only)	18734.95 Thousands of cubic meters per million \$ of revenue (for corporates only)	99.74 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● ... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	169.08 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	422.18 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	99.99 %
Water Intensity	2024	8751.76 Thousands of cubic meters per million \$ of revenue (for corporates only)	11723.22 Thousands of cubic meters per million \$ of revenue (for corporates only)	99.99 %
Carbon intensity (Scope 1+2)	2023	185.96 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign		
Water Intensity	2023	4279.82 Thousands of cubic meters for corporates	10005.91 Thousands of cubic meters for corporates	99.72 %
ESG Score	2022	6.35 / 10	5.36 / 10	97.02 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the "do not significantly harm" principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Delegated Regulation of the Benchmark Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	98	100
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	39.45 %	73	74
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	24.52%	86	87
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	21.73	98	99
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	25	26

For Sovereign and supnationals:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance blacklist based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 1556.427	Scope 1: 98 Scope 2: 98 Scope 3: 93 Scope 1+2: 98 Scope 1+2+3: 93	Scope 1: 99 Scope 2: 99 Scope 3: 94 Scope 1+2: 99 Scope 1+2+3: 94
Ecosystem protection & Deforestation policy			Scope 2: 1385.402		
Climate Risk policy			Scope 3: 34110.734		
Ecosystem protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 32.221	Scope 1+2: 49 Scope 1+2+3: 93	Scope 1+2: 50 Scope 1+2+3: 94
Climate Risk policy			Scope 1+2+3: 446.681		
Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1648.456	Scope 1+2+3: 93	Scope 1+2+3: 94
Climate Risk policy			Scope 1+2+3: 1648.456		
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	2.29	98	99
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable	Energy Consumption: 68.21 Energy Production: 14.89	Energy Consumption: 93 Energy Production: 0	Energy Consumption: 94 Energy Production: 0

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)			
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	23.58	78	79
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	98	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	21.73	98	99
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	25	26

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible

assets without available data” refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies’ revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFAC XTAI TWD	Manufacture of machinery and equipment n.e.c.	9.22%	TW
ALIBABA GROUP HOLDING LTD XHKG HKD	Retail trade, except of motor vehicles and motorcycles	3.33%	HK
SAMSUNG ELECTRONICS CO LTD XKRX KRW	Manufacture of computer, electronic and optical products	2.99%	KR
SK HYNIX INC XKRX KRW	Manufacture of computer, electronic and optical products	1.04%	KR
AGRICULTURAL BANK OF CHINA-H XHKG HKD	Financial service activities, except insurance and pension funding	1.03%	CN

The portfolio proportions of investments presented above are an average over the reference period.

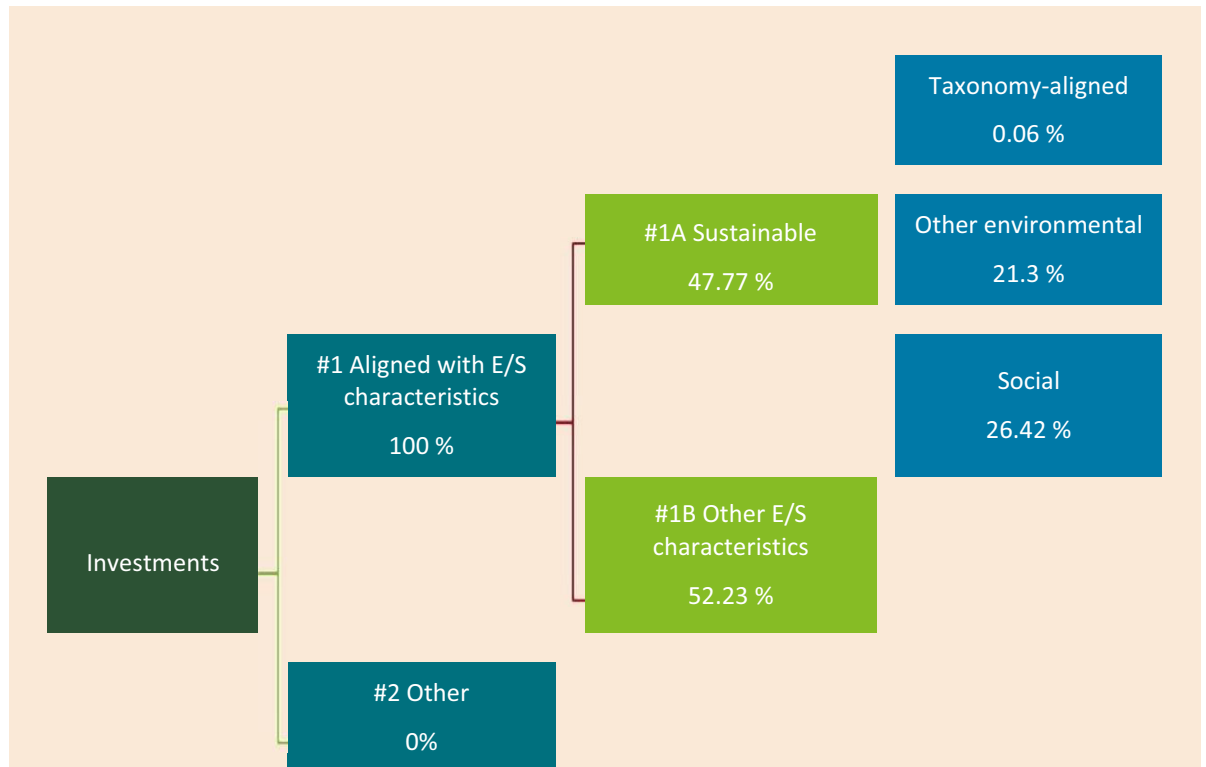

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	23.08%
Manufacture of machinery and equipment n.e.c.	9.75%
Manufacture of computer, electronic and optical products	9.7%
Retail trade, except of motor vehicles and motorcycles	8.72%
Insurance, reinsurance and pension funding, except compulsory social security	5.84%

Telecommunications	3.89%
Manufacture of beverages	3.51%
Computer programming, consultancy and related activities	3.41%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.26%
Manufacture of motor vehicles, trailers and semi-trailers	2.39%
Electricity, gas, steam and air conditioning supply	2.34%
Manufacture of electrical equipment	2.25%
Manufacture of food products	2.12%
Activities auxiliary to financial services and insurance activities	1.96%
Manufacture of other transport equipment	1.93%
Other	1.28%
Mining of metal ores	1.28%
Real estate activities	1.27%
Information service activities	1.24%
Human health activities	1.21%
Publishing activities	1.21%
Wholesale trade, except of motor vehicles and motorcycles	1.06%
Manufacture of chemicals and chemical products	0.69%
Accommodation	0.67%
Manufacture of wearing apparel	0.64%
Construction of buildings	0.6%
Manufacture of paper and paper products	0.56%
Warehousing and support activities for transportation	0.54%
Scientific research and development	0.5%
Food and beverage service activities	0.45%
Postal and courier activities	0.45%
Other personal service activities	0.36%
Office administrative, office support and other business support activities	0.3%
Gambling and betting activities	0.29%
Manufacture of other non-metallic mineral products	0.26%
Mining support service activities	0.19%
Manufacture of fabricated metal products, except machinery and equipment	0.12%
Other manufacturing	0.11%
Land transport and transport via pipelines	0.1%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.09%
Water transport	0.08%
Manufacture of coke and refined petroleum products	0.08%
Manufacture of basic metals	0.07%
Travel agency, tour operator reservation service and related activities	0.07%
Civil engineering	0.04%
Air transport	0.02%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

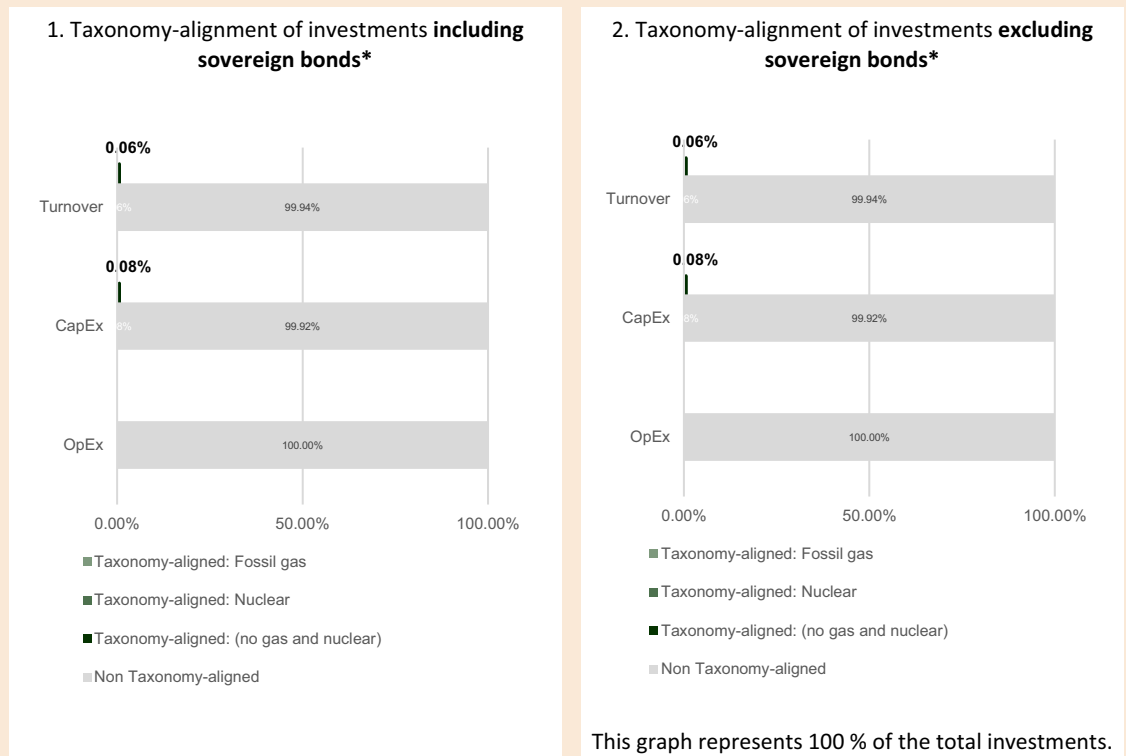

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.06%	0.10%	0.00%	0.00%
CapEx-based	0.08%	0.23%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 21.3% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 26.42% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product Name: AXA World Funds Emerging Markets Short Duration Bonds (the “Financial Product”)

Legal Entity Identifier: 2138006QV9ITIYYGQQ04

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="radio"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 35.38 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	319.14 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	488.51 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	79.77 %
Water Intensity	3326.67 Thousands of cubic meters per million \$ of revenue (for corporates only)	24477.52 Thousands of cubic meters per million \$ of revenue (for corporates only)	88.2 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● ... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	144.45 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	519.91 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	91.55 %
Water Intensity	2024	3270.81 Thousands of cubic meters per million \$ of revenue (for corporates only)	22008.9 Thousands of cubic meters per million \$ of revenue (for corporates only)	86.64 %
Carbon intensity	2023	190.52 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	578.82 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	90.68 %
Water Intensity	2023	5950.64 Thousands of cubic meters for corporates	24012.8 Thousands of cubic meters for corporates	82.3 %
Carbon intensity	2022	193.92 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	688.91 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	80.45 %
Water intensity	2022	6485.75 Thousands of cubic meters for corporates	37094.33 Thousands of cubic meters for corporates	71.61 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 33 Relative number: 33	Absolute number: 94 Relative number: 94

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 8927.232	Scope 1: 53 Scope 2: 53 Scope 3: 48 Scope 1+2: 53 Scope 1+2+3: 48	Scope 1: 86 Scope 2: 86 Scope 3: 77 Scope 1+2: 86 Scope 1+2+3: 77
Ecosystem protection & Deforestation policy			Scope 2: 1875.399 Scope 3: 122450.016 Scope 1+2: 10802.63 Scope 1+2+3: 132357.766		
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 81.347	Scope 1+2: 32 Scope 1+2+3: 48	Scope 1+2: 51 Scope 1+2+3: 77

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA WF Asian Short Duration Bonds M Capitalisation	Financial service activities, except insurance and pension funding	3.83%	FR
Portfolio 44940 USD SET SXX	Other	2.44%	N/A
IVYCST 5.25% - 22/03/2030 Sink	Public administration and defence, compulsory social security	2%	CI
SOAF 4.85% - 30/09/2029	Public administration and defence, compulsory social security	1.66%	ZA

The portfolio proportions of investments presented above are an average over the reference period.

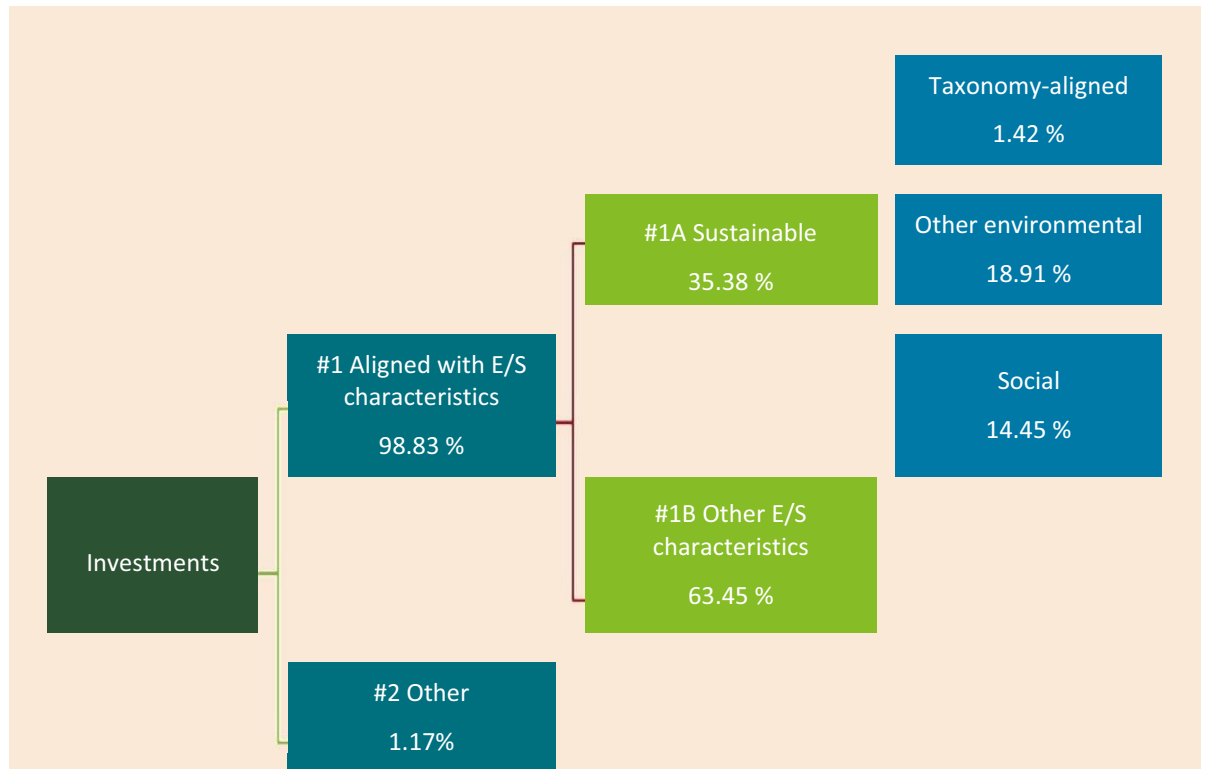

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	32.22%
Financial service activities, except insurance and pension funding	21.79%
Electricity, gas, steam and air conditioning supply	8.18%
Real estate activities	4.99%
Other	4.3%

Mining of metal ores	3.92%
Gambling and betting activities	3.63%
Telecommunications	3.41%
Manufacture of paper and paper products	2.29%
Retail trade, except of motor vehicles and motorcycles	2.24%
Activities of extraterritorial organisations and bodies	1.82%
Extraction of crude petroleum and natural gas	1.46%
Manufacture of coke and refined petroleum products	1.37%
Manufacture of chemicals and chemical products	1.09%
Manufacture of motor vehicles, trailers and semi-trailers	1.08%
Manufacture of food products	1.04%
Land transport and transport via pipelines	1%
Accommodation	0.73%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.56%
Construction of buildings	0.45%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.39%
Wholesale trade, except of motor vehicles and motorcycles	0.32%
Other mining and quarrying	0.32%
Office administrative, office support and other business support activities	0.29%
Manufacture of electrical equipment	0.22%
Manufacture of other non-metallic mineral products	0.15%
Manufacture of computer, electronic and optical products	0.15%
Insurance, reinsurance and pension funding, except compulsory social security	0.11%
Warehousing and support activities for transportation	0.11%
Air transport	0.11%
Mining support service activities	0.1%
Activities auxiliary to financial services and insurance activities	0.09%
Information service activities	0.05%
Repair and installation of machinery and equipment	0.02%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

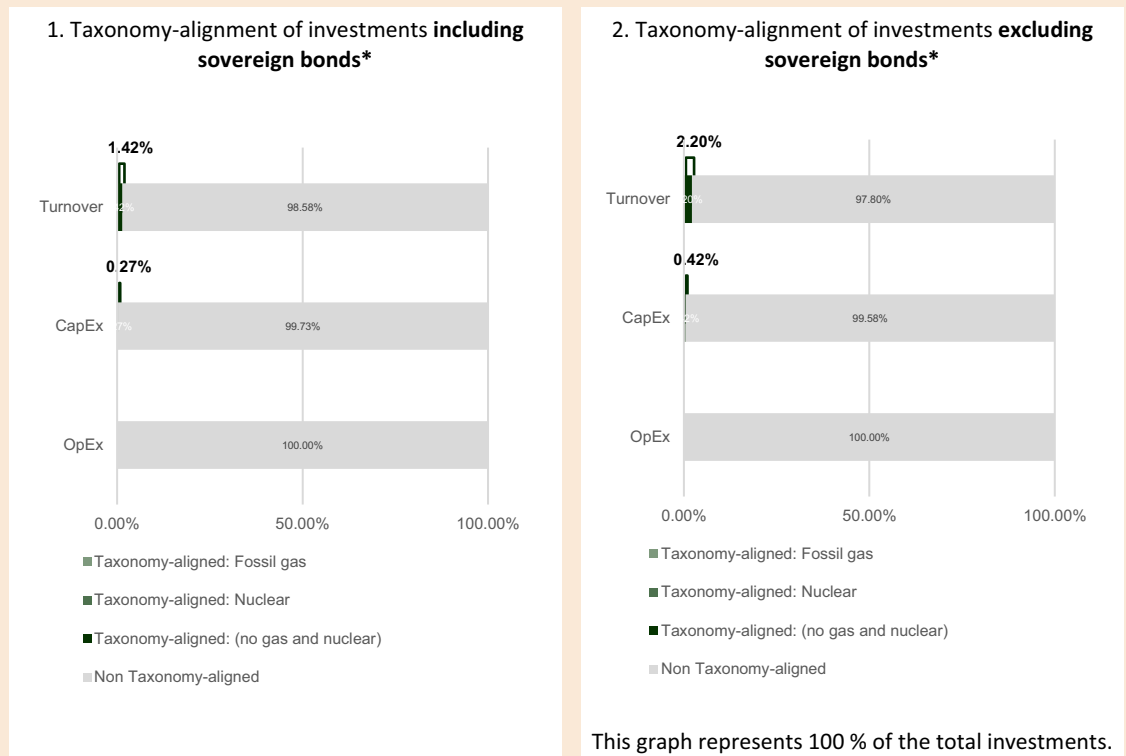

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	1.42%	2.27%	0.00%	0.00%
CapEx-based	0.27%	0.04%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 18.91% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 14.45% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 1.17% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro 7-10 (the “Financial Product”) **Legal Entity Identifier:** 213800BPPRBYRDW39K69

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 46.78 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.03 / 10	6.86 / 10	98.72 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	7.08 / 10	6.82 / 10	97.49 %
ESG Score	2023	7.08 / 10	6.7 / 10	98.38 %
ESG Score	2022	7.06 / 10	6.57 / 10	98.59 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	14	29

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 43 Relative number: 43	Absolute number: 91 Relative number: 91

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 5615.035	Scope 1: 41 Scope 2: 41 Scope 3: 34 Scope 1+2: 41 Scope 1+2+3: 34	Scope 1: 91 Scope 2: 91 Scope 3: 76 Scope 1+2: 91 Scope 1+2+3: 76
Ecosystem protection & Deforestation policy			Scope 2: 655.598 Scope 3: 35249.828 Scope 1+2: 6270.633 Scope 1+2+3: 40865.039		
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 74.037	Scope 1+2: 21 Scope 1+2+3: 34	Scope 1+2: 46 Scope 1+2+3: 76
Ecosystem protection & Deforestation policy			Scope 1+2+3: 196.245		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1565.051	Scope 1+2+3: 27	Scope 1+2+3: 61
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	5.56	41	91
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 51.15 Energy Production: 65.69	Energy Consumption: 35 Energy Production: 5	Energy Consumption: 78 Energy Production: 10
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	10.37	39	86

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	45	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	41.79	35	77
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	14	29

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 43 Relative number: 43	Absolute number: 91 Relative number: 91

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
SPGB 3.25% - 30/04/2034	Public administration and defence, compulsory social security	4.14%	ES
SPGB 3.15% - 30/04/2035	Public administration and defence, compulsory social security	3.86%	ES
BGB 2.85% - 22/10/2034	Public administration and defence, compulsory social security	3.68%	BE
BTPS 4.2% - 01/03/2034	Public administration and defence, compulsory social security	3.01%	IT
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	2.81%	FR
BTPS 5.75% - 01/02/2033	Public administration and defence, compulsory social security	2.6%	IT
RAGB 2.9% - 20/02/2033	Public administration and defence, compulsory social security	2.19%	AT
BTPS 3.85% - 01/02/2035	Public administration and defence, compulsory social security	2.19%	IT
FRTR 3.5% - 25/11/2033	Public administration and defence, compulsory social security	2.15%	FR
FRTR 3.2% - 25/05/2035	Public administration and defence, compulsory social security	2.02%	FR
SPGB 3.55% - 31/10/2033	Public administration and defence, compulsory social security	1.91%	ES
BTPS 3.65% - 01/08/2035	Public administration and defence, compulsory social security	1.4%	IT
SPGB 0.7% - 30/04/2032	Public administration and defence, compulsory social security	1.19%	ES
PGB 2.25% - 18/04/2034	Public administration and defence, compulsory social security	1.11%	PT
AGFRNC 3.5% - 25/02/2033	Financial service activities, except insurance and pension funding	1.08%	FR

The portfolio proportions of investments presented above are an average over the reference period.

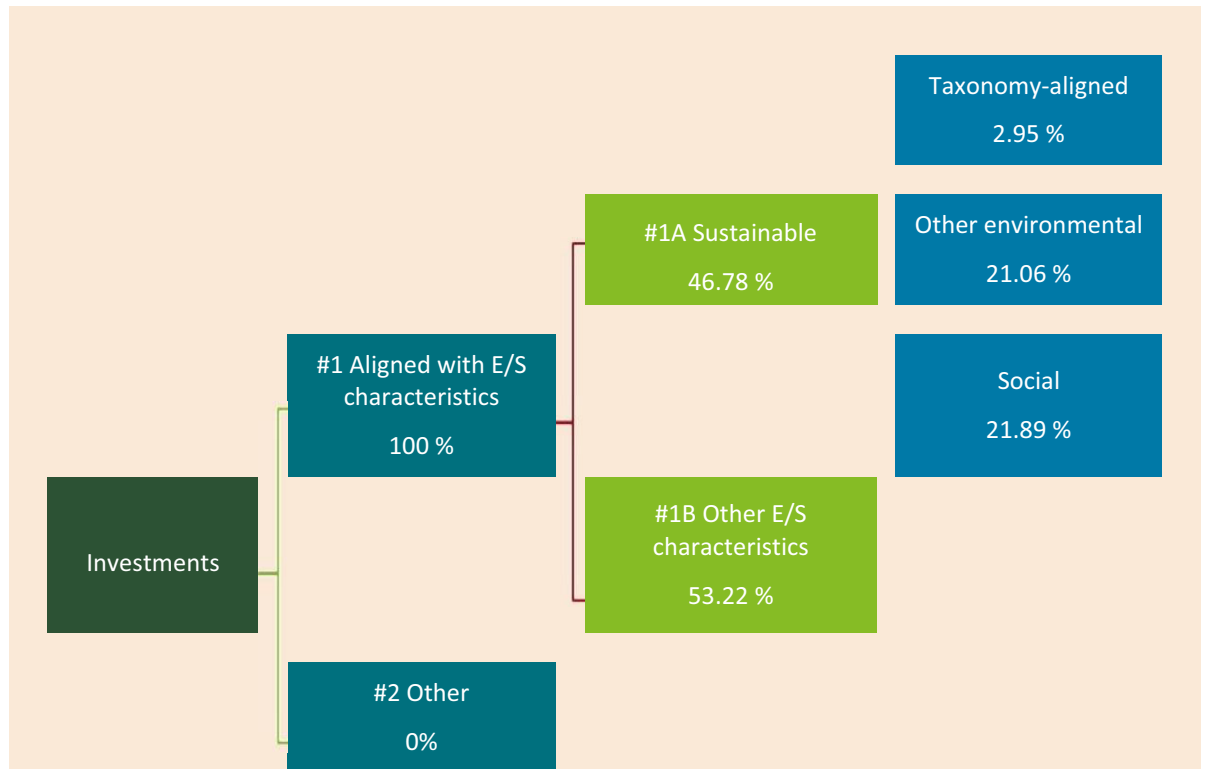

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	43.5%
Financial service activities, except insurance and pension funding	26.22%
Electricity, gas, steam and air conditioning supply	6.81%
Real estate activities	3.98%
Activities of extraterritorial organisations and bodies	3.3%

Insurance, reinsurance and pension funding, except compulsory social security	2.79%
Warehousing and support activities for transportation	2.02%
Telecommunications	1.66%
Land transport and transport via pipelines	1.04%
Manufacture of beverages	1.02%
Manufacture of motor vehicles, trailers and semi-trailers	0.99%
Manufacture of chemicals and chemical products	0.93%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.66%
Water collection, treatment and supply	0.64%
Civil engineering	0.6%
Manufacture of other non-metallic mineral products	0.51%
Manufacture of machinery and equipment n.e.c.	0.49%
Other	0.49%
Advertising and market research	0.37%
Air transport	0.35%
Manufacture of electrical equipment	0.31%
Manufacture of paper and paper products	0.27%
Manufacture of computer, electronic and optical products	0.25%
Rental and leasing activities	0.22%
Manufacture of leather and related products	0.15%
Mining of metal ores	0.12%
Retail trade, except of motor vehicles and motorcycles	0.11%
Human health activities	0.09%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.05%
Manufacture of food products	0.04%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	2.95%	4.35%	0.00%	0.00%
CapEx-based	4.47%	5.68%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 21.06% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 21.89% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro Bonds
(the “Financial Product”)

Legal Entity Identifier: 213800N97SPA2JJBT880

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●○ <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 55.42 % of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Women on Board
- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Class on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Women on Board and Carbon Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Women on Board indicator and iii) 70% for the Carbon Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Women on Board	40.5 % of women on board (for corporates only)	40.03 % of women on board (for corporates only)	95.83 %
Carbon Intensity	86.23 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	107.38 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	86.93 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Women on Board	2024	40.16 % of women on board (for corporates only)	38.93 % of women on board (for corporates only)	92.16 %
Carbon Intensity	2024	94.47 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	102.63 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	89.12 %
Water Intensity	2023	8188.34 Thousands of cubic meters for corporates	2856.41 Thousands of cubic meters for corporates	91.62 %
ESG Score	2022	7.08 / 10	6.6 / 10	98.62 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the "do not significantly harm" principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts ("PAIs") indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under - 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact' to - 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 11314.959 Scope 2: 3298.398 Scope 3: 176502.625 Scope 1+2: 14613.358 Scope 1+2+3: 190043.656	Scope 1: 47 Scope 2: 47 Scope 3: 39 Scope 1+2: 47 Scope 1+2+3: 39	Scope 1: 95 Scope 2: 95 Scope 3: 79 Scope 1+2: 95 Scope 1+2+3: 79

SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	14.84%	44	88

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	40.76	41	83
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	15	28

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 42 Relative number: 42	Absolute number: 95 Relative number: 95

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 3: GHG intensity of investee companies
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for

human rights, anti-corruption and anti-bribery matters.

Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity
Controversial weapons policy	PAI 14: Exposure to controversial weapons

For Sovereign and supnationals:

Relevant AXA IM policies	PAI indicator
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of AXA IM's exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark. The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund tends to invest in companies with a strong ESG profile through the implementation of an SRI strategy.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with

available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	2.69%	FR
BTPS 3.85% - 01/07/2034	Public administration and defence, compulsory social security	2.16%	IT
FRTR 1.75% - 25/06/2039	Public administration and defence, compulsory social security	1.41%	FR
SPGB 3.15% - 30/04/2035	Public administration and defence, compulsory social security	1.34%	ES

BTPS 5% - 01/09/2040	Public administration and defence, compulsory social security	0.86%	IT

The portfolio proportions of investments presented above are an average over the reference period.

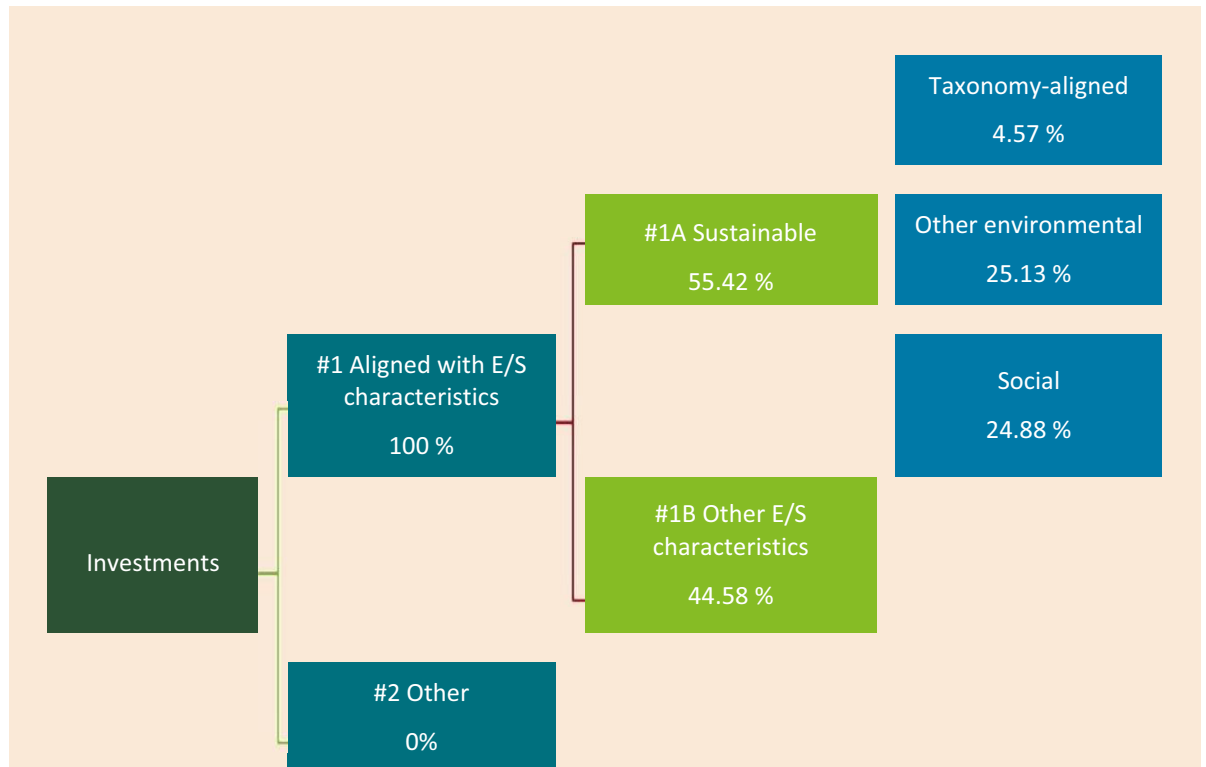

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	43.49%
Financial service activities, except insurance and pension funding	31.91%
Electricity, gas, steam and air conditioning supply	6.27%
Real estate activities	4%
Insurance, reinsurance and pension funding, except compulsory social security	2.3%

Activities of extraterritorial organisations and bodies	2%
Telecommunications	1.81%
Warehousing and support activities for transportation	1.12%
Manufacture of motor vehicles, trailers and semi-trailers	0.84%
Manufacture of beverages	0.7%
Manufacture of chemicals and chemical products	0.65%
Water collection, treatment and supply	0.62%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.62%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.53%
Manufacture of machinery and equipment n.e.c.	0.46%
Activities auxiliary to financial services and insurance activities	0.39%
Manufacture of other non-metallic mineral products	0.36%
Land transport and transport via pipelines	0.32%
Activities of head offices, management consultancy activities	0.31%
Scientific research and development	0.28%
Air transport	0.2%
Advertising and market research	0.19%
Computer programming, consultancy and related activities	0.19%
Manufacture of paper and paper products	0.16%
Postal and courier activities	0.14%
Manufacture of wearing apparel	0.13%
Retail trade, except of motor vehicles and motorcycles	0.08%
Manufacture of food products	0.05%
Manufacture of electrical equipment	0.05%
Mining of metal ores	0.04%
Other	-0.2%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	4.57%	5.90%	0.00%	0.00%
CapEx-based	4.45%	5.18%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 25.13% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 24.88% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Financial Product has been awarded with the French Label ISR in 2024 and therefore applied continuously the label’s requirements since its labelling into its daily management during the reference period. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro Buy and Maintain Sustainable Credit (the “Financial Product”) **Legal Entity Identifier:** 213800YNBXQUVXK3YX10

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="radio"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 80.93 % of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Women on Board

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon Intensity and Women on Board during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon Intensity indicator and iii) 70% for the Women on Board indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	106.26 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	137.15 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	84.41 %
Women on Board	40.51 % of women on board (for corporates only)	40.19 % of women on board (for corporates only)	94.84 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● ... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	101.72 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	135.5 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	95.31 %
Women on Board	2024	39.05 % of women on board (for corporates only)	39.78 % of women on board (for corporates only)	96.32 %
Carbon intensity	2023	110.43 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	138.97 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.82 %
Water Intensity	2023	2703.97 Thousands of cubic meters for corporates	4776.06 Thousands of cubic meters for corporates	95.78 %
Carbon intensity	2022	148.83 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	192.56 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.41 %
Water intensity	2022	13050.17 Thousands of cubic meters for corporates	18076.7 Thousands of cubic meters for corporates	95.41 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Delegated Regulation of the Benchmark Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 3: GHG intensity of investee companies
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity
Controversial weapons policy	PAI 14: Exposure to controversial weapons

For Sovereign and supranationals:

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of AXA IM's exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark.

The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund tends to invest in companies with a strong ESG profile through the implementation of an SRI strategy.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the “current value of all investments” as defined by the Regulation, or on “eligible assets with available data only” where relevant. For the purpose of this document, “eligible assets with available data only” refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. “Eligible assets without available data” refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies’ revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA Tresor Court Terme Capitalisation EUR	Financial service activities, except insurance and pension funding	1.15%	FR

BAMIIM 4.625% - 29/11/2027	Financial service activities, except insurance and pension funding	0.77%	IT

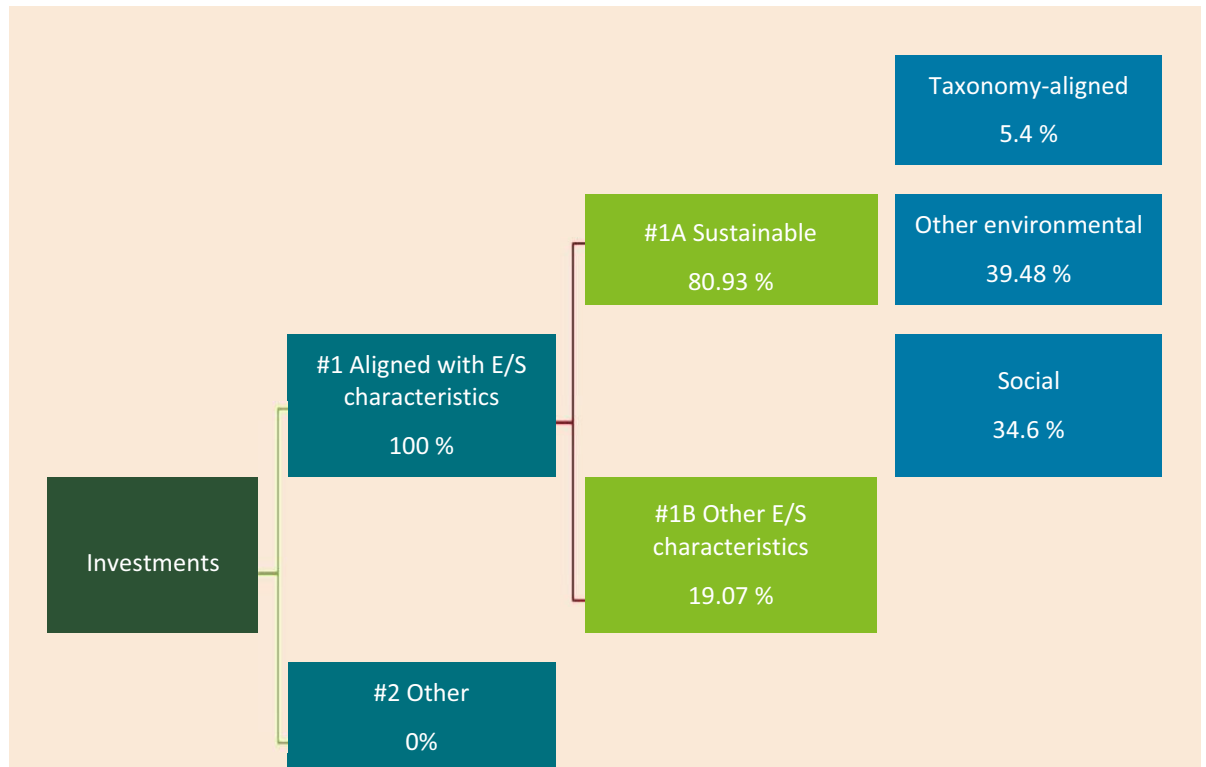

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	28.53%
Electricity, gas, steam and air conditioning supply	9.06%
Real estate activities	7.01%
Insurance, reinsurance and pension funding, except compulsory social security	5.59%
Telecommunications	5.54%

Manufacture of motor vehicles, trailers and semi-trailers	3.86%
Activities auxiliary to financial services and insurance activities	3.55%
Manufacture of beverages	3.48%
Manufacture of chemicals and chemical products	3.45%
Warehousing and support activities for transportation	3.24%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.71%
Manufacture of computer, electronic and optical products	2.56%
Manufacture of electrical equipment	2.15%
Manufacture of food products	1.53%
Civil engineering	1.49%
Manufacture of paper and paper products	1.47%
Rental and leasing activities	1.46%
Advertising and market research	1.45%
Other manufacturing	1.41%
Manufacture of other non-metallic mineral products	1.21%
Retail trade, except of motor vehicles and motorcycles	0.79%
Publishing activities	0.78%
Air transport	0.77%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.76%
Programming and broadcasting activities	0.76%
Manufacture of machinery and equipment n.e.c.	0.72%
Scientific research and development	0.71%
Computer programming, consultancy and related activities	0.68%
Water collection, treatment and supply	0.68%
Legal and accounting activities	0.64%
Information service activities	0.63%
Land transport and transport via pipelines	0.53%
Postal and courier activities	0.47%
Wholesale trade, except of motor vehicles and motorcycles	0.24%
Other	0.1%
Activities of extraterritorial organisations and bodies	0%
Public administration and defence, compulsory social security	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	5.40%	8.99%	0.00%	0.00%
CapEx-based	4.82%	6.96%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 39.48% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 34.6% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product's investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro Credit Plus (the “Financial Product”)

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="checkbox"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 70.75 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.42 / 10	7.35 / 10	97.8 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	7.43 / 10	7.35 / 10	96.45 %
ESG Score	2023	7.51 / 10	7.4 / 10	96.08 %
ESG Score	2022	7.41 / 10	7.33 / 10	96.97 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 43493.84 Scope 2: 7404.155 Scope 3: 598999.625 Scope 1+2: 50897.996 Scope 1+2+3: 644493.625	Scope 1: 91 Scope 2: 91 Scope 3: 77 Scope 1+2: 91 Scope 1+2+3: 77	Scope 1: 92 Scope 2: 92 Scope 3: 78 Scope 1+2: 92 Scope 1+2+3: 78

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 1 Relative number: 1	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 43493.84	Scope 1: 91	Scope 1: 92
Ecosystem protection & Deforestation policy			Scope 2: 7404.155		
			Scope 3: 598999.625	Scope 3: 77	Scope 3: 78
			Scope 1+2: 50897.996	Scope 1+2: 91	Scope 1+2: 92
			Scope 1+2+3: 644493.625	Scope 1+2+3: 77	Scope 1+2+3: 78
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 56.619	Scope 1+2: 47	Scope 1+2: 47
Ecosystem protection & Deforestation policy			Scope 1+2+3: 587.441		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1563.956	Scope 1+2+3: 59	Scope 1+2+3: 59
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	11.89	91	92
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 52.37 Energy Production: 65.67	Energy Consumption: 76 Energy Production: 8	Energy Consumption: 76 Energy Production: 8
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	23.06	88	88

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	98	98
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	39.64	75	76
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	29	29

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA WF Euro Credit Total Return M Capitalisation E	Financial service activities, except insurance and pension funding	2.31%	LU
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	2.2%	FR

The portfolio proportions of investments presented above are an average over the reference period.

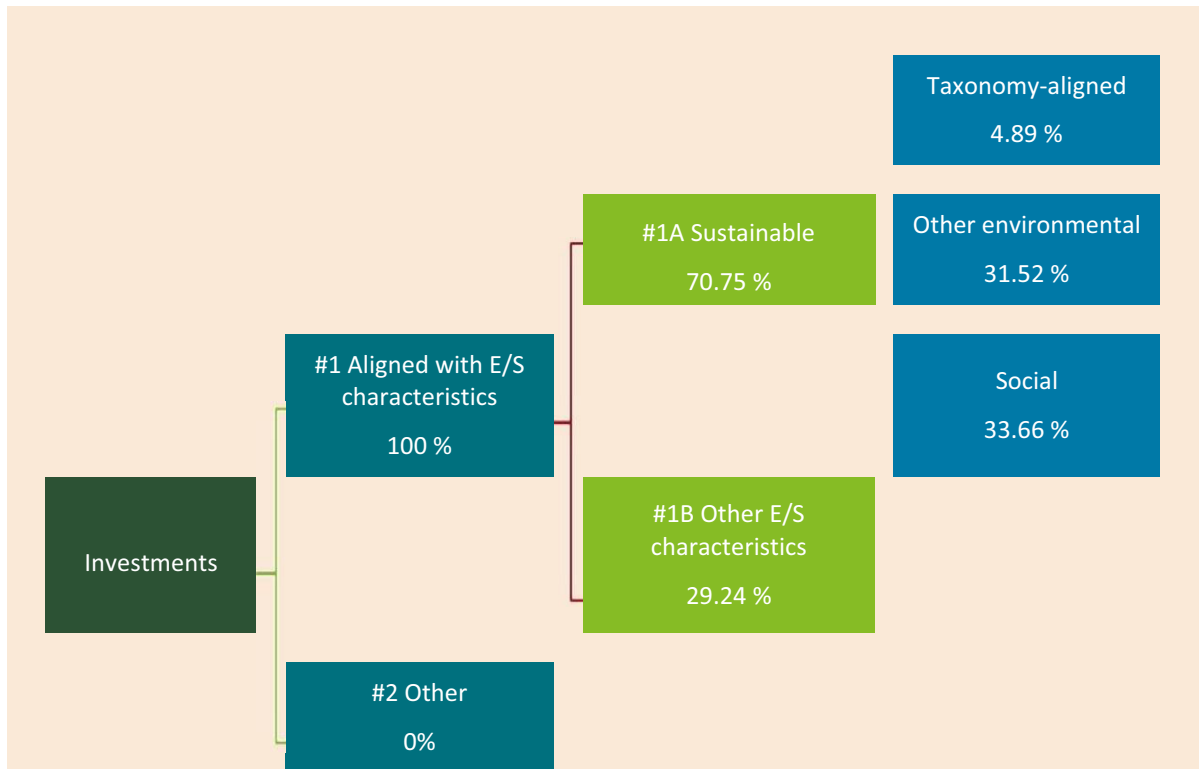

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	37.36%
Electricity, gas, steam and air conditioning supply	11.15%
Real estate activities	10.16%
Insurance, reinsurance and pension funding, except compulsory social security	7.73%
Telecommunications	6.52%

Manufacture of motor vehicles, trailers and semi-trailers	4.31%
Warehousing and support activities for transportation	2.73%
Manufacture of coke and refined petroleum products	2.1%
Manufacture of beverages	2.08%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.61%
Activities auxiliary to financial services and insurance activities	1.43%
Manufacture of food products	1.16%
Retail trade, except of motor vehicles and motorcycles	1.09%
Air transport	0.95%
Other manufacturing	0.8%
Rental and leasing activities	0.77%
Public administration and defence, compulsory social security	0.75%
Manufacture of computer, electronic and optical products	0.71%
Water collection, treatment and supply	0.71%
Manufacture of leather and related products	0.67%
Manufacture of chemicals and chemical products	0.66%
Information service activities	0.62%
Civil engineering	0.61%
Postal and courier activities	0.48%
Manufacture of paper and paper products	0.47%
Advertising and market research	0.43%
Waste collection, treatment and disposal activities, materials recovery	0.35%
Services to buildings and landscape activities	0.35%
Manufacture of electrical equipment	0.28%
Land transport and transport via pipelines	0.28%
Office administrative, office support and other business support activities	0.23%
Legal and accounting activities	0.19%
Extraction of crude petroleum and natural gas	0.19%
Manufacture of basic metals	0.18%
Manufacture of other transport equipment	0.16%
Manufacture of wearing apparel	0.13%
Manufacture of machinery and equipment n.e.c.	0.12%
Activities of head offices, management consultancy activities	0.07%
Gambling and betting activities	0%
Activities of extraterritorial organisations and bodies	0%
Other	-0.61%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	4.89%	5.56%	0.00%	0.00%
CapEx-based	8.00%	8.29%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 31.52% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 33.66% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro Credit Short Duration (the “Financial Product”)

Legal Entity Identifier: 213800R84TOP7WXDMI25

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 72.77 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.43 / 10	7.3 / 10	98.69 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	7.5 / 10	7.28 / 10	97.1 %
ESG Score	2023	7.51 / 10	7.33 / 10	96.65 %
ESG Score	2022	7.39 / 10	7.33 / 10	96.81 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 123398.055 Scope 2: 15693.045 Scope 3: 2241089.5 Scope 1+2: 139091.094 Scope 1+2+3: 2364969.5	Scope 1: 90 Scope 2: 90 Scope 3: 77 Scope 1+2: 90 Scope 1+2+3: 77	Scope 1: 94 Scope 2: 94 Scope 3: 80 Scope 1+2: 94 Scope 1+2+3: 80

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	39.66	77	80
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	28	29

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 2 Relative number: 2	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 123398.055	Scope 1: 90	Scope 1: 94
Ecosystem protection & Deforestation policy			Scope 2: 15693.045		
			Scope 3: 2241089.5	Scope 3: 77	Scope 3: 80
			Scope 1+2: 139091.094	Scope 1+2: 90	Scope 1+2: 94
			Scope 1+2+3: 2364969.5	Scope 1+2+3: 77	Scope 1+2+3: 80
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 43.573	Scope 1+2: 47	Scope 1+2: 49
Ecosystem protection & Deforestation policy			Scope 1+2+3: 729.571		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1892.427	Scope 1+2+3: 61	Scope 1+2+3: 64
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	10.46	90	94
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 48.19	Energy Consumption: 80	Energy Consumption: 83
			Energy Production: 64.19		
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	18.48	88	91

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	96	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	39.66	77	80
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	28	29

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 2 Relative number: 2	Absolute number: 100 Relative number: 100

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	4.96%	FR
SANTAN 4.625% Var - 18/10/2027 Call	Financial service activities, except insurance and pension funding	1.28%	ES

The portfolio proportions of investments presented above are an average over the reference period.

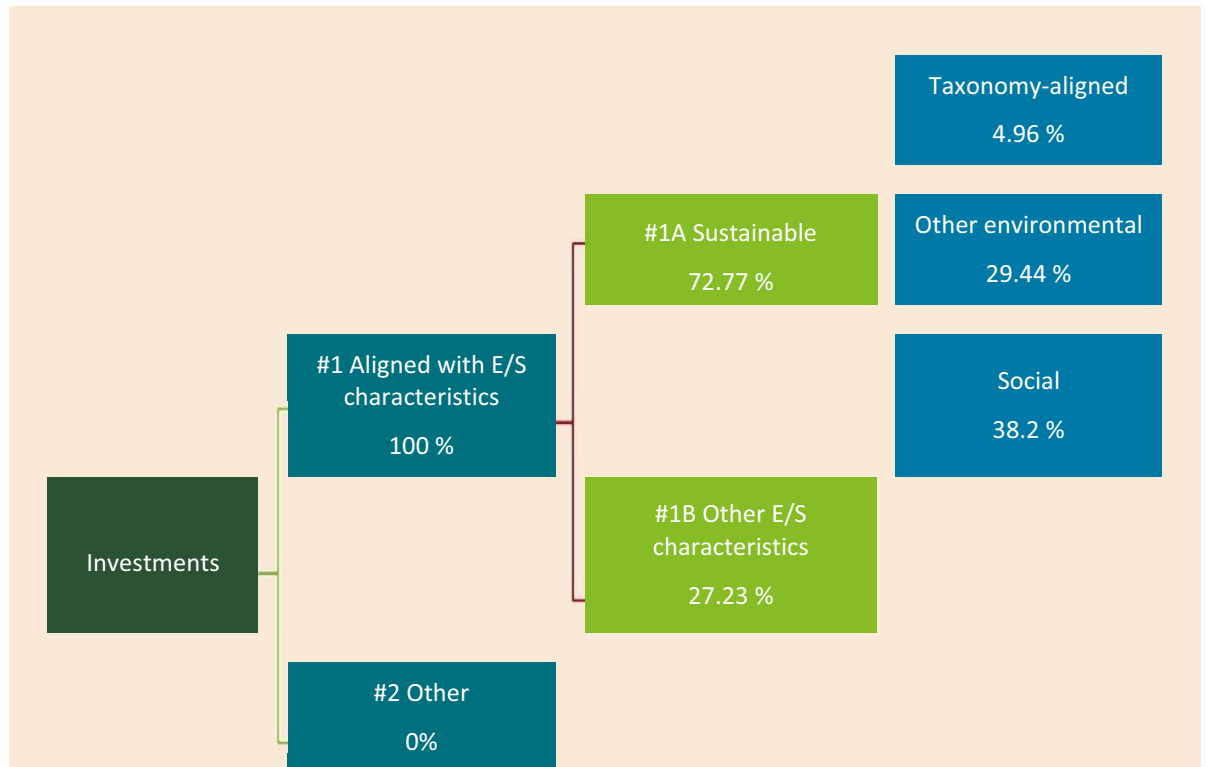

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	51.81%
Electricity, gas, steam and air conditioning supply	10.71%
Manufacture of motor vehicles, trailers and semi-trailers	6.75%
Real estate activities	5.45%
Telecommunications	4.6%

Warehousing and support activities for transportation	2.13%
Activities auxiliary to financial services and insurance activities	2.09%
Insurance, reinsurance and pension funding, except compulsory social security	1.91%
Public administration and defence, compulsory social security	1.68%
Manufacture of coke and refined petroleum products	1.5%
Other	1.24%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.17%
Manufacture of beverages	1.06%
Air transport	0.95%

Gambling and betting activities	0.12%
Manufacture of other non-metallic mineral products	0.07%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	4.96%	5.52%	0.00%	0.00%
CapEx-based	8.35%	6.72%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 29.44% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 38.2% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro Credit Total Return (the “Financial Product”)

Legal Entity Identifier: 213800FPDKN4GVHVJI39

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

YES

- It made **sustainable investments with an environmental objective**: ___%
- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- It made **sustainable investments with a social objective**: ___%

NO

- It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 66.12 % of sustainable investments
- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective
- It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	7.38 / 10	6.97 / 10	96.96 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	7.37 / 10	6.91 / 10	94.67 %
ESG Score	2023	7.39 / 10	6.94 / 10	95.09 %
ESG Score	2022	7.25 / 10	6.64 / 10	96.09 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 3 Relative number: 3	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	2.44%	FR

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	31.79%
Real estate activities	11.89%
Electricity, gas, steam and air conditioning supply	10.92%
Insurance, reinsurance and pension funding, except compulsory social security	8.07%
Telecommunications	5.09%

Manufacture of chemicals and chemical products	3.92%
Warehousing and support activities for transportation	3.29%
Manufacture of motor vehicles, trailers and semi-trailers	3.24%
Public administration and defence, compulsory social security	2.67%
Manufacture of coke and refined petroleum products	2.33%
Activities auxiliary to financial services and insurance activities	1.65%
Retail trade, except of motor vehicles and motorcycles	1.33%
Manufacture of other non-metallic mineral products	1.16%
Rental and leasing activities	1.11%
Water collection, treatment and supply	0.9%
Manufacture of beverages	0.89%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.8%
Air transport	0.64%
Civil engineering	0.63%
Gambling and betting activities	0.56%
Scientific research and development	0.52%
Manufacture of electrical equipment	0.46%
Mining of metal ores	0.43%
Advertising and market research	0.39%
Publishing activities	0.39%
Manufacture of food products	0.36%
Motion picture, video and television programme production, sound recording and music publishing activity	0.34%
Manufacture of wearing apparel	0.34%
Repair and installation of machinery and equipment	0.31%
Water transport	0.31%
Computer programming, consultancy and related activities	0.3%
Mining support service activities	0.3%
Human health activities	0.29%
Services to buildings and landscape activities	0.29%
Manufacture of rubber and plastic products	0.28%
Wholesale trade, except of motor vehicles and motorcycles	0.25%
Office administrative, office support and other business support activities	0.25%
Manufacture of fabricated metal products, except machinery and equipment	0.23%
Postal and courier activities	0.23%
Manufacture of computer, electronic and optical products	0.2%
Sports activities and amusement and recreation activities	0.16%
Security and investigation activities	0.14%
Waste collection, treatment and disposal activities, materials recovery	0.14%
Other manufacturing	0.11%
Land transport and transport via pipelines	0.11%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.1%
Manufacture of leather and related products	0.04%
Manufacture of paper and paper products	0.03%
Activities of extraterritorial organisations and bodies	0%
Other	-0.16%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	4.60%	4.67%	0.00%	0.00%
CapEx-based	8.02%	6.43%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 30.42% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 29.49% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.06% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro Government Bonds (the “Financial Product”)

Legal Entity Identifier: 213800YPBGVOHJV6NK89

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 16.61 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6.51 / 10	6.37 / 10	99.88 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	6.42 / 10	6.31 / 10	99.82 %
ESG Score	2023	6.18 / 10	6.16 / 10	99.89 %
ESG Score	2022	6.09 / 10	6.05 / 10	99.82 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 1279.489 Scope 2: 304.629 Scope 3: 16061.978 Scope 1+2: 1584.118 Scope 1+2+3: 17595.488	Scope 1: 6 Scope 2: 6 Scope 3: 4 Scope 1+2: 6 Scope 1+2+3: 4	Scope 1: 82 Scope 2: 82 Scope 3: 56 Scope 1+2: 82 Scope 1+2+3: 56

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 89 Relative number: 89	Absolute number: 99 Relative number: 99

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets																																				
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 1279.489	Scope 1: 6 Scope 2: 6 Scope 3: 4 Scope 1+2: 6 Scope 1+2+3: 4	Scope 1: 82 Scope 2: 82 Scope 3: 56 Scope 1+2: 82 Scope 1+2+3: 56

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	4.6%	FR
SPGB 0.8% - 30/07/2029	Public administration and defence, compulsory social security	2.26%	ES
FRTR 2.5% - 25/05/2030	Public administration and defence, compulsory social security	2.01%	FR
FRTR 1.75% - 25/06/2039	Public administration and defence, compulsory social security	1.97%	FR
DBR 4.25% - 04/07/2039	Public administration and defence, compulsory social security	1.85%	DE
DBR 0 - 15/08/2030	Public administration and defence, compulsory social security	1.78%	DE
BTPS 3% - 01/10/2029	Public administration and defence, compulsory social security	1.64%	IT
FRTR 0 - 25/02/2027	Public administration and defence, compulsory social security	1.63%	FR
BTPS 1.1% - 01/04/2027	Public administration and defence, compulsory social security	1.58%	IT

BTPS 2.8% - 15/06/2029	Public administration and defence, compulsory social security	1.44%	IT

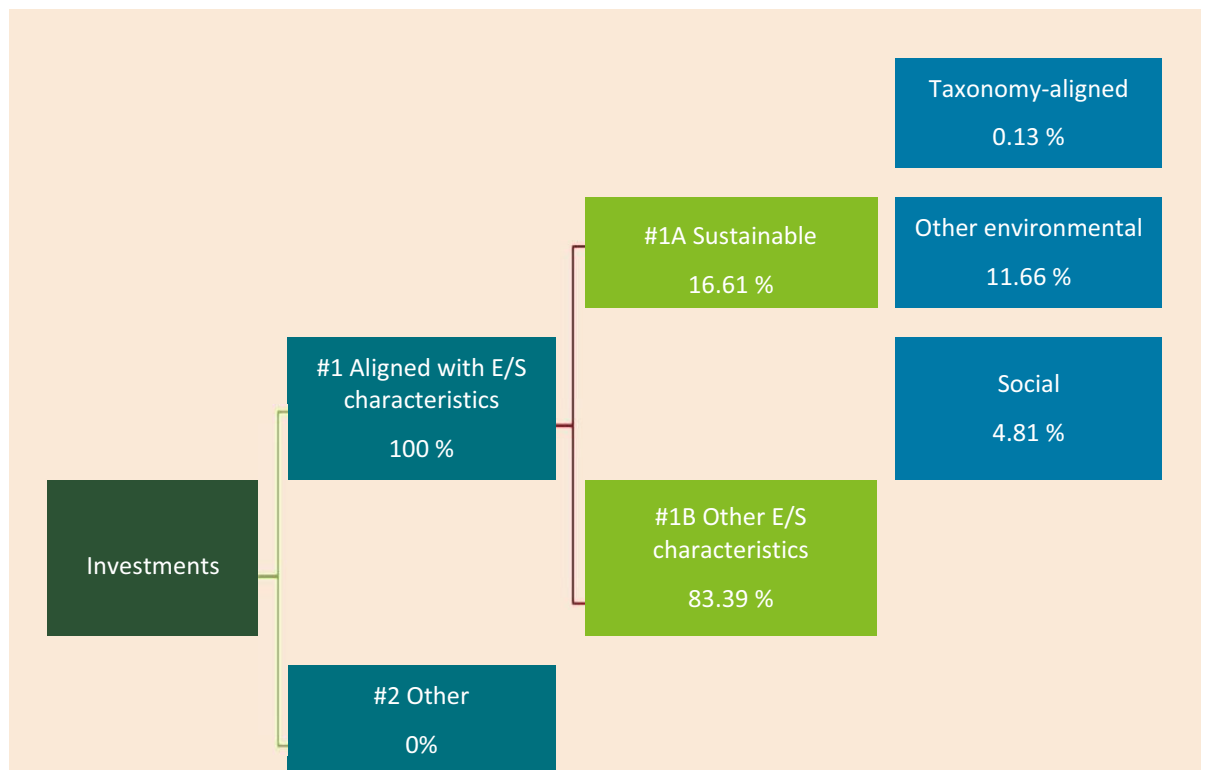

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	89%
Financial service activities, except insurance and pension funding	10.19%
Activities of extraterritorial organisations and bodies	0.66%
Other	0.15%
Food and beverage service activities	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
 - In fossil gas
 - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.13%	0.12%	0.00%	0.00%
CapEx-based	0.54%	0.21%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 11.66% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 4.81% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro Inflation Bonds (the “Financial Product”) **Legal Entity Identifier:** 2138002DL7V11O568C73

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 1.8 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6.05 / 10	6.1 / 10	99.98 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	6.06 / 10	6.12 / 10	100 %
ESG Score	2023	5.91 / 10	6 / 10	99.99 %
ESG Score	2022	5.85 / 10	5.82 / 10	99.87 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 38.438 Scope 2: 9.093 Scope 3: 296.074 Scope 1+2: 47.531 Scope 1+2+3: 341.623	Scope 1: 0 Scope 2: 0 Scope 3: 0 Scope 1+2: 0 Scope 1+2+3: 0	Scope 1: 72 Scope 2: 72 Scope 3: 54 Scope 1+2: 72 Scope 1+2+3: 54

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 99 Relative number: 99	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 38.438	Scope 1: 0	Scope 1: 72
Ecosystem protection & Deforestation policy			Scope 2: 9.093	Scope 2: 0	Scope 2: 72
			Scope 3: 296.074	Scope 3: 0	Scope 3: 54
			Scope 1+2: 47.531	Scope 1+2: 0	Scope 1+2: 72
			Scope 1+2+3: 341.623	Scope 1+2+3: 0	Scope 1+2+3: 54
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/€M)	Scope 1+2: 26.575	Scope 1+2: 0	Scope 1+2: 45
Ecosystem protection & Deforestation policy			Scope 1+2+3: 1.142	Scope 1+2+3: 0	Scope 1+2+3: 54
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO ₂ e/€M)	Scope 1+2+3: 2460.678	Scope 1+2+3: 0	Scope 1+2+3: 38
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	0.03	0	72
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	0.06	0	71
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	0	75
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	0	29

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
• AXA IM ESG Standards policy,	PAI 16: Sovereign Investee countries	Number of investee countries subject to	Absolute number: 0 Relative number: 0	Absolute number: 99 Relative number: 99	Absolute number: 100

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

through the exclusion of investee countries with severe social violations • Compliance black-list based on international and EU sanctions	subject to social violations	social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law			Relative number: 100

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
FRTR 1.85% - 25/07/2027 CPI	Public administration and defence, compulsory social security	5.93%	FR
FRTR 0.1% - 01/03/2029 CPI	Public administration and defence, compulsory social security	4.41%	FR
SPGBEI 0.7% - 30/11/2033 CPI	Public administration and defence, compulsory social security	4.25%	ES
SPGBEI 1% - 30/11/2030 CPI	Public administration and defence, compulsory social security	4.18%	ES
FRTR 3.15% - 25/07/2032 CPI	Public administration and defence, compulsory social security	3.95%	FR
SPGBEI 0.65% - 30/11/2027 CPI	Public administration and defence, compulsory social security	3.89%	ES
BTPS 2.55% - 15/09/2041 CPI	Public administration and defence, compulsory social security	3.88%	IT
FRTR 0.7% - 25/07/2030 CPI	Public administration and defence, compulsory social security	3.82%	FR

BTPS 1.25% - 15/09/2032 CPI	Public administration and defence, compulsory social security	3.06%	IT

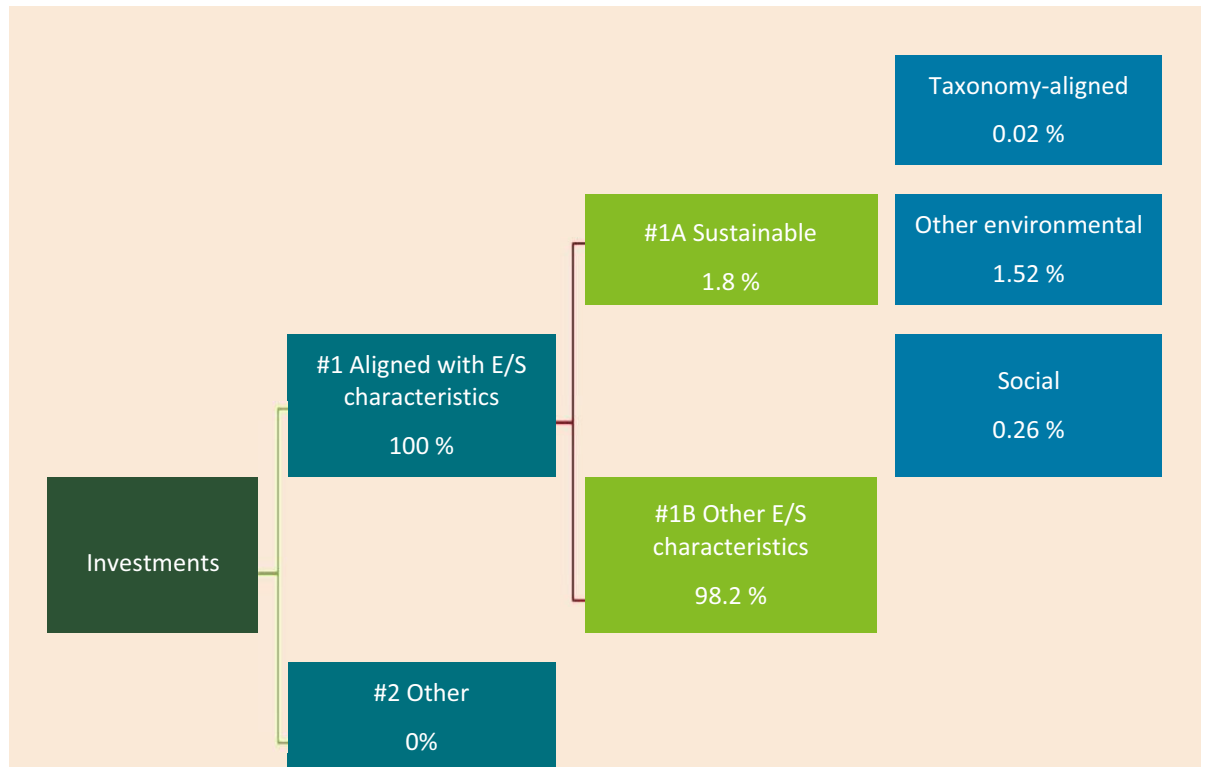

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	98.98%
Financial service activities, except insurance and pension funding	0.59%
Other	0.43%
Manufacture of machinery and equipment n.e.c.	0%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.02%	0.01%	0.00%	0.00%
CapEx-based	0.04%	0.02%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 1.52% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 0.26% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro Long Duration Bonds (the “Financial Product”)

Legal Entity Identifier: 213800BZN8BM2BYMBD28

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 30.97 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6.67 / 10	6.59 / 10	99.9 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	6.67 / 10	6.57 / 10	99.32 %
ESG Score	2023	6.73 / 10	6.44 / 10	99.23 %
ESG Score	2022	6.79 / 10	6.36 / 10	99.07 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 761.48 Scope 2: 111.266 Scope 3: 6671.556 Scope 1+2: 872.746 Scope 1+2+3: 7434.605	Scope 1: 21 Scope 2: 21 Scope 3: 18 Scope 1+2: 21 Scope 1+2+3: 18	Scope 1: 95 Scope 2: 95 Scope 3: 80 Scope 1+2: 95 Scope 1+2+3: 80

Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	3.25	21	95
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 49.72 Energy Production: 62.15	Energy Consumption: 18 Energy Production: 3	Energy Consumption: 81 Energy Production: 13
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector (GWh/€M)	Sector NACE C: 0.272 Sector NACE D: 1.654 Sector NACE E: 1.064 Sector NACE G: 0.738 Sector NACE H: 0.085 Sector NACE L: 0.219	Sector NACE A: 0 Sector NACE B: 0 Sector NACE C: 2 Sector NACE D: 3 Sector NACE E: 0 Sector NACE F: 0 Sector NACE G: 0 Sector NACE H: 1 Sector NACE L: 4	Sector NACE C: 9 Sector NACE D: 13 Sector NACE E: 1 Sector NACE G: 1 Sector NACE H: 4 Sector NACE L: 20
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	6.72	20	88
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested,	0.005	6	26

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

		expressed as a weighted average (t/€M)			
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	0.244	11	48

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	23	100
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	3.1 %	20	89
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	13.05%	20	87
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	41.15	18	81
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	7	30

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 62 Relative number: 62	Absolute number: 86 Relative number: 86

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 761.48	Scope 1: 21	Scope 1: 95
Ecosystem protection & Deforestation policy			Scope 2: 111.266	Scope 2: 21	Scope 2: 95
			Scope 3: 6671.556	Scope 3: 18	Scope 3: 80
			Scope 1+2: 872.746	Scope 1+2: 21	Scope 1+2: 95
			Scope 1+2+3: 7434.605	Scope 1+2+3: 18	Scope 1+2+3: 80
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 65.547	Scope 1+2: 11	Scope 1+2: 50
Ecosystem protection & Deforestation policy			Scope 1+2+3: 126.219	Scope 1+2+3: 18	Scope 1+2+3: 80
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1329.662	Scope 1+2+3: 13	Scope 1+2+3: 60
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	3.25	21	95
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 49.72 Energy Production: 62.15	Energy Consumption: 18 Energy Production: 3	Energy Consumption: 81 Energy Production: 13
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	6.72	20	88

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	23	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	41.15	18	81
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	7	30

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 62 Relative number: 62	Absolute number: 86 Relative number: 86

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
BTPS 4.45% - 01/09/2043	Public administration and defence, compulsory social security	7.5%	IT
FRTR 4% - 25/04/2055	Public administration and defence, compulsory social security	6.84%	FR
FRTR 2.5% - 25/05/2043	Public administration and defence, compulsory social security	6.47%	FR
SPGB 4.9% - 30/07/2040	Public administration and defence, compulsory social security	6.03%	ES
BTPS 4.5% - 01/10/2053	Public administration and defence, compulsory social security	5.13%	IT
SPGB 3.45% - 30/07/2066	Public administration and defence, compulsory social security	2.89%	ES
NETHER 3.25% - 15/01/2044	Public administration and defence, compulsory social security	2.57%	NL
SPGB 3.45% - 30/07/2043	Public administration and defence, compulsory social security	2.46%	ES
DBR 3.25% - 04/07/2042	Public administration and defence, compulsory social security	2.4%	DE
BGB 1.4% - 22/06/2053	Public administration and defence, compulsory social security	2.07%	BE
BTPS 4.75% - 01/09/2044	Public administration and defence, compulsory social security	1.64%	IT
BGB 3.45% - 22/06/2043	Public administration and defence, compulsory social security	1.48%	BE
RAGB 3.15% - 20/10/2053	Public administration and defence, compulsory social security	1.35%	AT
FRTR 0.5% - 25/05/2040	Public administration and defence, compulsory social security	1.32%	FR
RAGB 3.15% - 20/06/2044	Public administration and defence, compulsory social security	1.3%	AT

The portfolio proportions of investments presented above are an average over the reference period.

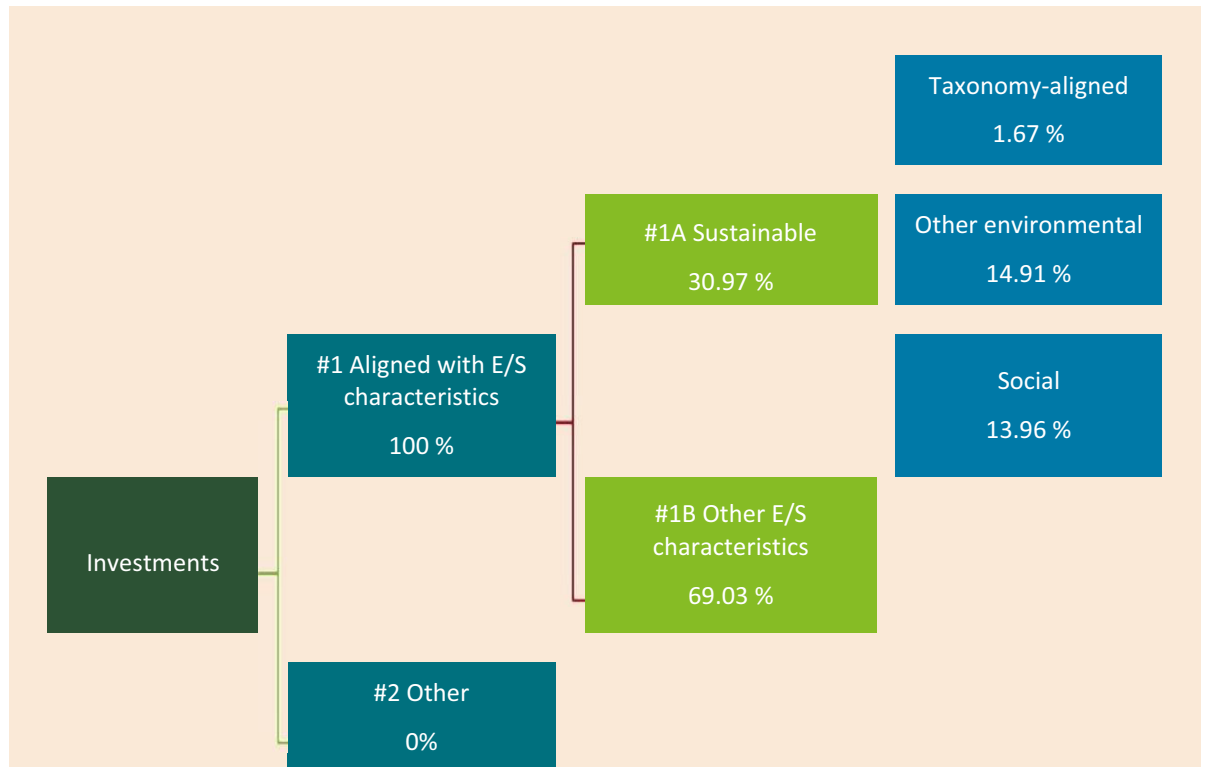

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	63.48%
Financial service activities, except insurance and pension funding	10.16%
Activities of extraterritorial organisations and bodies	9.5%
Electricity, gas, steam and air conditioning supply	3.68%
Real estate activities	2.48%

Insurance, reinsurance and pension funding, except compulsory social security	1.69%
Telecommunications	1.54%
Warehousing and support activities for transportation	1.53%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.89%
Manufacture of beverages	0.85%
Other	0.53%
Civil engineering	0.52%
Manufacture of motor vehicles, trailers and semi-trailers	0.52%
Land transport and transport via pipelines	0.37%
Other manufacturing	0.34%
Manufacture of other non-metallic mineral products	0.3%
Advertising and market research	0.25%
Manufacture of chemicals and chemical products	0.25%
Water collection, treatment and supply	0.24%
Rental and leasing activities	0.23%
Manufacture of computer, electronic and optical products	0.18%
Scientific research and development	0.17%
Manufacture of paper and paper products	0.13%
Human health activities	0.1%
Mining of metal ores	0.08%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	1.67%	2.20%	0.00%	0.00%
CapEx-based	2.94%	3.66%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 14.91% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 13.96% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro Selection **Legal Entity Identifier:** 2138006UOXOICOH1HT33
(the “Financial Product”)

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●○ <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 93.9 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their E Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon Intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon Intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	117.9 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	114.67 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	82.98 %
Water Intensity	379.26 Thousands of cubic meters per million \$ of revenue (for corporates only)	1560.1 Thousands of cubic meters per million \$ of revenue (for corporates only)	99.64 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	86.4 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	136.64 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	100 %
Water Intensity	2024	401.89 Thousands of cubic meters per million \$ of revenue (for corporates only)	1414.16 Thousands of cubic meters per million \$ of revenue (for corporates only)	100 %
Carbon intensity	2023	83.71 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	150.66 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Water Intensity	2023	452.5 Thousands of cubic meters for corporates	1721.95 Thousands of cubic meters for corporates	100 %
Carbon intensity	2022	95.56 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	240.09 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Water intensity	2022	3277.79 Thousands of cubic meters for corporates	14236.19 Thousands of cubic meters for corporates	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. **UN Sustainable Development Goals alignment (SDG)** of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee

company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 3: GHG intensity of investee companies
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity
Controversial weapons policy	PAI 14: Exposure to controversial weapons

For Sovereign and supranationals:

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of AXA IM's exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark. The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund tends to invest in companies with a strong ESG profile through the implementation of an SRI strategy.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with

available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	6.49%	NL
ALLIANZ SE-REG XETR EUR	Insurance, reinsurance and pension funding, except compulsory social security	5.23%	DE
SAP SE XETR EUR	Publishing activities	4.9%	DE
IBERDROLA SA XMAD EUR	Electricity, gas, steam and air conditioning supply	4.13%	ES
BANCO BILBAO VIZCAYA ARGENTA XMAD EUR	Financial service activities, except insurance and pension funding	3.88%	ES

VINCI SA XPAR EUR	Civil engineering	2.94%	FR
COMPAGNIE DE SAINT GOBAIN XPAR EUR	Manufacture of other non-metallic mineral products	2.92%	FR
DEUTSCHE TELEKOM AG-REG XETR EUR	Telecommunications	2.72%	DE
DEUTSCHE BOERSE AG XETR EUR	Activities auxiliary to financial services and insurance activities	2.66%	DE
HERMES INTERNATIONAL XPAR EUR	Manufacture of wearing apparel	2.62%	FR

The portfolio proportions of investments presented above are an average over the reference period.

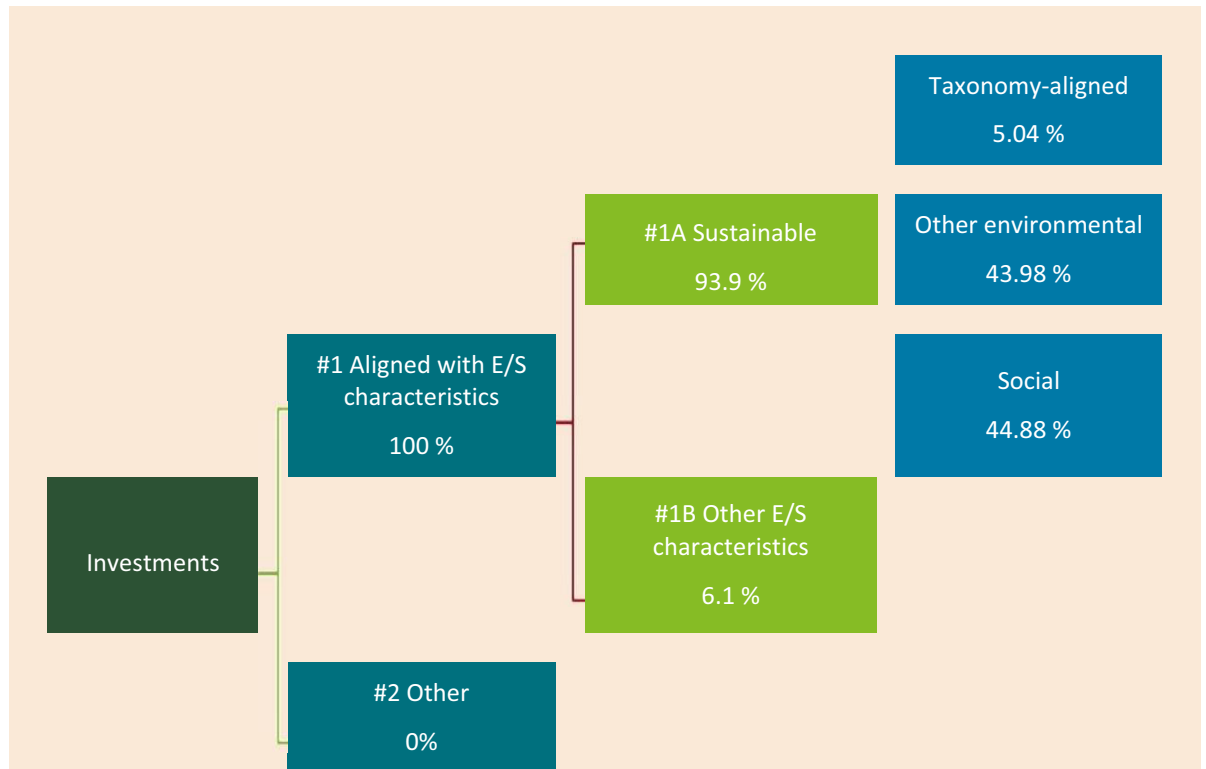

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	15.93%
Manufacture of chemicals and chemical products	7.59%
Publishing activities	6.82%
Manufacture of machinery and equipment n.e.c.	6.67%
Electricity, gas, steam and air conditioning supply	6.12%

Insurance, reinsurance and pension funding, except compulsory social security	5.23%
Manufacture of electrical equipment	4.12%
Manufacture of other non-metallic mineral products	3.76%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.22%
Civil engineering	3.22%
Architectural and engineering activities, technical testing and analysis	2.95%
Telecommunications	2.72%
Activities auxiliary to financial services and insurance activities	2.66%
Manufacture of wearing apparel	2.62%
Advertising and market research	2.37%
Retail trade, except of motor vehicles and motorcycles	2.23%
Manufacture of motor vehicles, trailers and semi-trailers	2.13%
Manufacture of rubber and plastic products	2.02%
Other manufacturing	1.99%
Legal and accounting activities	1.87%
Manufacture of paper and paper products	1.75%
Manufacture of fabricated metal products, except machinery and equipment	1.74%
Manufacture of computer, electronic and optical products	1.69%
Manufacture of beverages	1.48%
Manufacture of leather and related products	1.45%
Scientific research and development	1.25%
Warehousing and support activities for transportation	1.18%
Other	0.91%
Human health activities	0.74%
Wholesale trade, except of motor vehicles and motorcycles	0.72%
Real estate activities	0.65%
Motion picture, video and television programme production, sound recording and music publishing activity	0.18%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	5.04%	4.92%	0.00%	0.00%
CapEx-based	12.27%	7.85%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 43.98% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 44.88% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product's investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Euro Strategic Bonds (the "Financial Product") **Legal Entity Identifier:** 2138006GTA831JB41E69

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 51.31 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.91 / 10	6.72 / 10	97.99 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	6.97 / 10	6.67 / 10	95.82 %
ESG Score	2023	6.96 / 10	6.59 / 10	97.68 %
ESG Score	2022	6.89 / 10	6.52 / 10	98.84 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 9965.643 Scope 2: 1854.344 Scope 3: 187704.25 Scope 1+2: 11819.987 Scope 1+2+3: 198076.031	Scope 1: 52 Scope 2: 52 Scope 3: 41 Scope 1+2: 52 Scope 1+2+3: 41	Scope 1: 92 Scope 2: 92 Scope 3: 73 Scope 1+2: 92 Scope 1+2+3: 73

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 38 Relative number: 38	Absolute number: 94 Relative number: 94

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
SPGB 1.2% - 31/10/2040	Public administration and defence, compulsory social security	4.12%	ES
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	3.12%	FR
BGB 3% - 22/06/2034	Public administration and defence, compulsory social security	2.78%	BE
BTPS 5% - 01/09/2040	Public administration and defence, compulsory social security	2.64%	IT
BTPS 4.5% - 01/10/2053	Public administration and defence, compulsory social security	2.46%	IT
PGB 3.625% - 12/06/2054	Public administration and defence, compulsory social security	2.28%	PT
SPGB 3.15% - 30/04/2035	Public administration and defence, compulsory social security	2.24%	ES
FRTR 4.5% - 25/04/2041	Public administration and defence, compulsory social security	2.08%	FR
SPGB 3.25% - 30/04/2034	Public administration and defence, compulsory social security	1.94%	ES
RAGB 2.9% - 20/02/2033	Public administration and defence, compulsory social security	1.67%	AT
FRTR 1.25% - 25/05/2034	Public administration and defence, compulsory social security	1.64%	FR
CHILE 0.83% - 02/07/2031 Call	Public administration and defence, compulsory social security	1.6%	CL
ROMANI 2.375% - 19/04/2027	Public administration and defence, compulsory social security	1.6%	RO
EU 3.25% - 04/07/2034	Activities of extraterritorial organisations and bodies	1.35%	LU
PHILIP 3.625% - 04/02/2032	Public administration and defence, compulsory social security	1.12%	PH

The portfolio proportions of investments presented above are an average over the reference period.

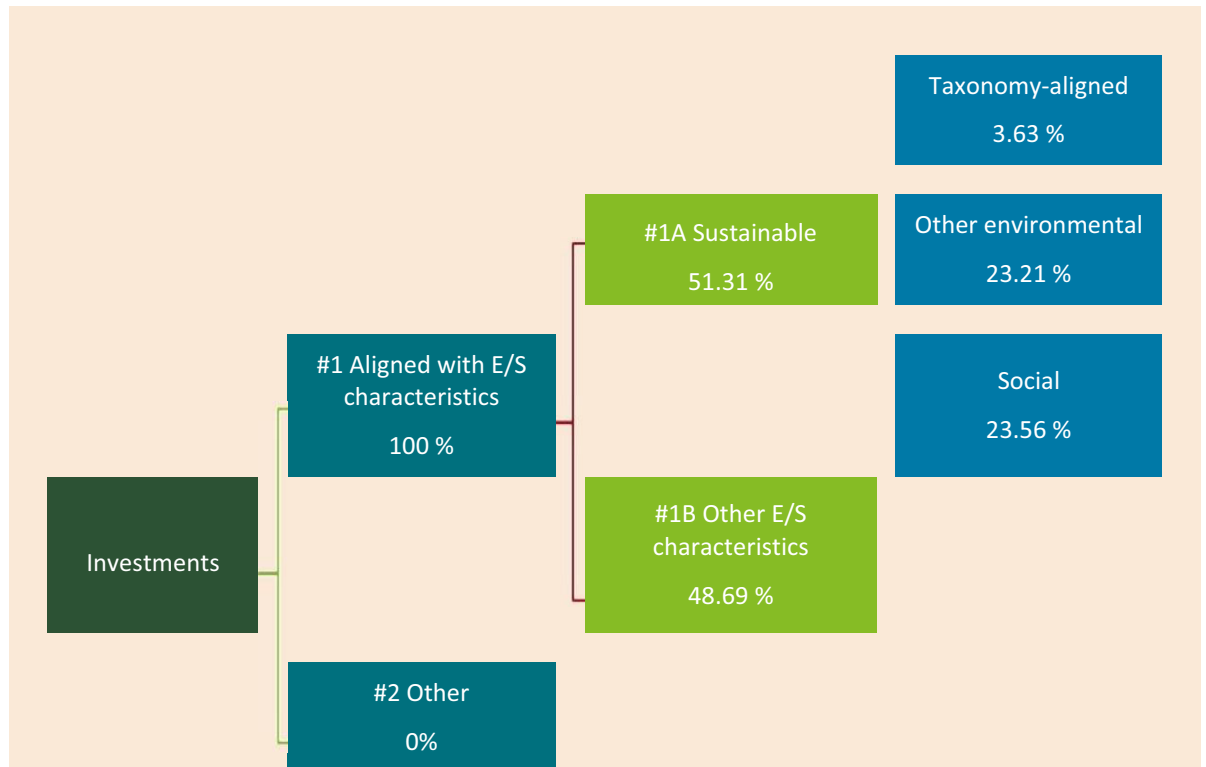

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	37.95%
Financial service activities, except insurance and pension funding	31.85%
Electricity, gas, steam and air conditioning supply	6.36%
Real estate activities	5.06%
Manufacture of motor vehicles, trailers and semi-trailers	3.41%

Insurance, reinsurance and pension funding, except compulsory social security	2.86%
Activities of extraterritorial organisations and bodies	2.26%
Warehousing and support activities for transportation	1.38%
Telecommunications	1.29%
Other	0.8%
Land transport and transport via pipelines	0.73%
Manufacture of beverages	0.52%
Waste collection, treatment and disposal activities, materials recovery	0.5%
Scientific research and development	0.47%
Water collection, treatment and supply	0.43%
Advertising and market research	0.41%
Civil engineering	0.4%
Retail trade, except of motor vehicles and motorcycles	0.35%
Manufacture of coke and refined petroleum products	0.35%
Publishing activities	0.32%
Manufacture of machinery and equipment n.e.c.	0.31%
Manufacture of chemicals and chemical products	0.29%
Manufacture of computer, electronic and optical products	0.27%
Air transport	0.21%
Rental and leasing activities	0.2%
Manufacture of other non-metallic mineral products	0.2%
Mining of metal ores	0.14%
Human health activities	0.14%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.14%
Manufacture of wearing apparel	0.13%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.11%
Manufacture of paper and paper products	0.09%
Manufacture of electrical equipment	0.06%
Other manufacturing	0.03%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	3.63%	4.61%	0.00%	0.00%
CapEx-based	4.86%	5.63%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 23.21% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 23.56% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product Name: AXA World Funds Euro Sustainable Credit (the “Financial Product”)

Legal Entity Identifier: 2138006TWRTUKT9NE169

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 79.39 % of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product uses an 'extra-financial indicator improvement' approach, and outperformed Carbon Intensity by at least 20% compared to its Benchmark ICE BofA Euro Corporate 1-10 Yrs during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	81.94 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	134.55 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	86.41 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	95.35 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	132.92 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	96.34 %
Women on board	2023	39.33 % of women on board	38.82 % of women on board	96.25 %
Carbon Intensity	2023	112.97 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	136.56 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.29 %
Women on board	2022	39.42 % of women on board	38.28 % of women on board	95.42 %
Carbon Intensity	2022	139.23 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	191.01 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	93.71 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability

strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Delegated Regulation of the Benchmark Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

with board gender diversity		percentage of all board members (%)			
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	27	27

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance blacklist based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 75 Relative number: 75

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 19121.898	Scope 1: 96	Scope 1: 95
Ecosystem protection & Deforestation policy			Scope 2: 4734.235		
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 23856.133	Scope 3: 81	Scope 3: 81
Ecosystem protection & Deforestation policy			Scope 1+2+3: 278999.5		
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 35.814	Scope 1+2+3: 81	Scope 1+2+3: 81
Ecosystem protection & Deforestation policy			Scope 1+2+3: 436.588		
Climate Risk policy				Scope 1+2+3: 64	Scope 1+2+3: 64

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO ₂ e/€M)	Scope 1+2+3: 1732.707		
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	10.21	96	95
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 48.72 Energy Production: 53.13	Energy Consumption: 81 Energy Production: 7	Energy Consumption: 81 Energy Production: 7
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	27.16	93	93
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	100	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	41.51	80	80
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	27	27

For Sovereign and supnationals:

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the “current value of all investments” as defined by the Regulation, or on “eligible assets with available data only” where relevant. For the purpose of this document, “eligible assets with available data only” refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. “Eligible assets without available data” refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies’ revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
BFCM 5.125% - 13/01/2033	Financial service activities, except insurance and pension funding	1.18%	FR
UCGIM 4.2% - 11/06/2034	Financial service activities, except insurance and pension funding	0.97%	IT
BBVASM 4.875% Var - 08/02/2036 Call	Financial service activities, except insurance and pension funding	0.97%	ES
AXA Tresor Court Terme Capitalisation EUR	Financial service activities, except insurance and pension funding	0.89%	FR
NNGRNV 6% Var - 03/11/2043 Call	Insurance, reinsurance and pension funding, except compulsory social security	0.83%	NL

VOD 3.375% - 01/08/2033 Call	Telecommunications	0.78%	IE
AXASA 1.375% Var - 07/10/2041 Call	Insurance, reinsurance and pension funding, except compulsory social security	0.77%	FR
DB 5% Var - 05/09/2030 Call	Financial service activities, except insurance and pension funding	0.74%	DE
NDAFH 3.625% - 15/03/2034	Financial service activities, except insurance and pension funding	0.74%	FI

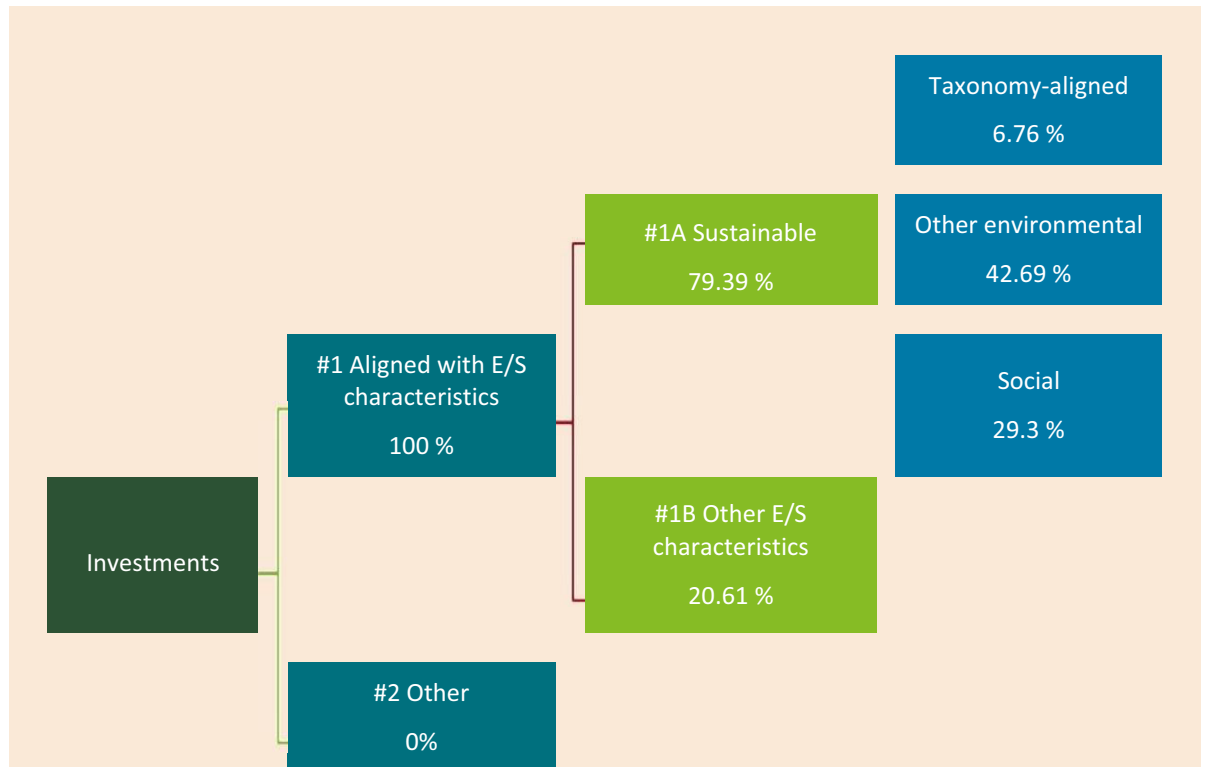

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	36.45%
Electricity, gas, steam and air conditioning supply	13.77%
Insurance, reinsurance and pension funding, except compulsory social security	7.45%
Real estate activities	6.88%
Telecommunications	5.44%

Manufacture of motor vehicles, trailers and semi-trailers	4.32%
Manufacture of beverages	3.98%
Activities auxiliary to financial services and insurance activities	3.55%
Warehousing and support activities for transportation	2.97%
Manufacture of food products	2.26%
Other manufacturing	2.01%
Manufacture of chemicals and chemical products	1.64%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.51%
Manufacture of paper and paper products	1.43%
Manufacture of electrical equipment	1.08%
Publishing activities	1.05%
Retail trade, except of motor vehicles and motorcycles	0.99%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.48%
Manufacture of wearing apparel	0.44%
Rental and leasing activities	0.44%
Air transport	0.3%
Information service activities	0.29%
Manufacture of rubber and plastic products	0.27%
Manufacture of other non-metallic mineral products	0.27%
Manufacture of machinery and equipment n.e.c.	0.27%
Travel agency, tour operator reservation service and related activities	0.24%
Scientific research and development	0.24%
Manufacture of other transport equipment	0.11%
Office administrative, office support and other business support activities	0.1%
Public administration and defence, compulsory social security	0%
Activities of extraterritorial organisations and bodies	0%
Other	-0.24%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	6.76%	9.70%	0.00%	0.00%
CapEx-based	7.55%	11.34%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 42.69% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 29.3% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

Through the year, the Financial Product has adjusted its SRI strategy from a Best-in-class selectivity approach on its investment universe to an ‘extra-financial indicator improvement’ approach which aim at outperforming its Carbon intensity by at least 20% compared to its reference benchmark, as described in the relative SFDR Annex of the prospectus of the Financial Product.

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Europe Equity **Legal Entity Identifier:** 213800V707LG6W3DLE71
(the “Financial Product”)

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 90.47 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Women on Board

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has reduced its investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and E Score to the exception of cash held on an ancillary basis and Solidarity Assets.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	83.06 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	109.95 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	83.31 %
Women on Board	43.11 % of women on board (for corporates only)	42.04 % of women on board (for corporates only)	99.24 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	116.01 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	133.04 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	99.86 %
Women on Board	2024	43.01 % of women on board (for corporates only)	42.04 % of women on board (for corporates only)	99.37 %
Carbon intensity	2023	145.37 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	147.72 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.82 %
Women on Board	2023	42.15 % of women on board	41.24 % of women on board	98.21 %
Carbon intensity	2022	148.83 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	199.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.56 %
Women on Board	2022	41.37 % of women on board	39.73 % of women on board	99.74 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the "do not significantly harm" principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

For Sovereign and supnationals:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance blacklist based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 24021.813	Scope 1: 99	Scope 1: 100
Ecosystem protection & Deforestation policy			Scope 2: 14466.273		
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 38488.086	Scope 1+2: 49	Scope 1+2: 50
Ecosystem protection & Deforestation policy			Scope 1+2+3: 77734.75		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2: 608.726	Scope 1+2+3: 82	Scope 1+2+3: 83

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment.

The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
ALLIANZ SE-REG XETR EUR	Insurance, reinsurance and pension funding, except compulsory social security	5.06%	DE
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.74%	GB
INTESA SANPAOLO MTAA EUR	Financial service activities, except insurance and pension funding	4.09%	IT
SAP SE XETR EUR	Publishing activities	3.66%	DE
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	3.59%	NL
DEUTSCHE TELEKOM AG-REG XETR EUR	Telecommunications	2.98%	DE
HSBC HOLDINGS PLC XLON GBP	Financial service activities, except insurance and pension funding	2.94%	GB
COMPAGNIE DE SAINT GOBAIN XPAR EUR	Manufacture of other non-metallic mineral products	2.91%	FR
NATIONAL GRID PLC XLON GBP	Electricity, gas, steam and air conditioning supply	2.81%	GB
LONZA GROUP AG-REG XSWX CHF	Human health activities	2.8%	CH
ROCHE HOLDING AG-GENUSSCHEIN XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.72%	CH
RELX PLC XLON GBP	Legal and accounting activities	2.63%	GB
PRYSMIAN SPA MTAA EUR	Manufacture of fabricated metal products, except machinery and equipment	2.58%	IT
PUBLICIS GROUPE XPAR EUR	Advertising and market research	2.47%	FR
COMPASS GROUP PLC XLON GBP	Food and beverage service activities	2.45%	GB

The portfolio proportions of investments presented above are an average over the reference period.

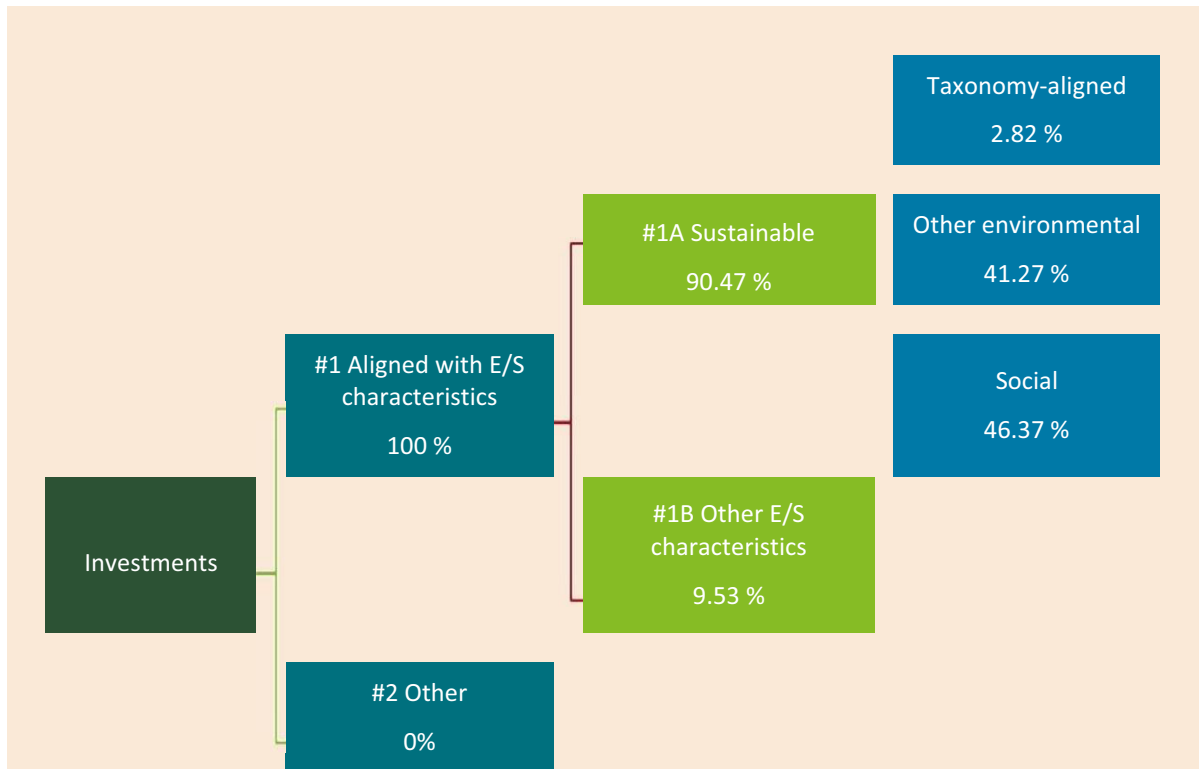

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	14.56%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	10.93%
Manufacture of machinery and equipment n.e.c.	8.01%
Publishing activities	6.87%
Electricity, gas, steam and air conditioning supply	5.79%

Insurance, reinsurance and pension funding, except compulsory social security	5.06%
Activities auxiliary to financial services and insurance activities	3.94%
Manufacture of chemicals and chemical products	3.67%
Manufacture of paper and paper products	3.35%
Legal and accounting activities	3.32%
Telecommunications	2.98%
Manufacture of other non-metallic mineral products	2.91%
Human health activities	2.8%
Manufacture of fabricated metal products, except machinery and equipment	2.58%
Advertising and market research	2.47%
Food and beverage service activities	2.45%
Manufacture of food products	2.09%
Manufacture of electrical equipment	2%
Manufacture of beverages	1.91%
Rental and leasing activities	1.61%
Manufacture of rubber and plastic products	1.42%
Manufacture of leather and related products	1.39%
Retail trade, except of motor vehicles and motorcycles	1.38%
Manufacture of coke and refined petroleum products	1.36%
Manufacture of computer, electronic and optical products	1.24%
Travel agency, tour operator reservation service and related activities	0.85%
Security and investigation activities	0.82%
Scientific research and development	0.65%
Manufacture of other transport equipment	0.64%
Other	0.42%
Civil engineering	0.2%
Manufacture of motor vehicles, trailers and semi-trailers	0.17%
Computer programming, consultancy and related activities	0.16%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	2.82%	3.86%	0.00%	0.00%
CapEx-based	9.60%	6.70%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 41.27% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 46.37% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Europe Ex-UK **Legal Entity Identifier:** 213800RFUQI3RGAM6H69
Microcap (the “Financial Product”)

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 37.26 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

During the reference period, the Financial Product has applied a ESG Score Upgrade Approach approach on its investment universe, according to which the ESG scoring of the Financial Product has been higher than the scoring of the investment universe after removing at least the 20% worst ESG Scores, on a weighted average basis.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	73.92 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	115.5 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	79.03 %
Water Intensity	2065.17 Thousands of cubic meters per million \$ of revenue (for corporates only)	3229.47 Thousands of cubic meters per million \$ of revenue (for corporates only)	92.17 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	76.95 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	132.94 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	91.92 %
Water Intensity	2024	1656.91 Thousands of cubic meters per million \$ of revenue (for corporates only)	5380.89 Thousands of cubic meters per million \$ of revenue (for corporates only)	90.35 %
Carbon intensity	2023	89.43 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	158.04 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	91.26 %
Carbon intensity	2022	113.26 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	159.53 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	82.89 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

For Sovereign and supranationals:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 75 Relative number: 75

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 3: GHG intensity of investee companies
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity
Controversial weapons policy	PAI 14: Exposure to controversial weapons

For Sovereign and supranationals:

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of AXA IM's exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark. The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund tends to invest in companies with a strong ESG profile through the implementation of an SRI strategy.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	5.97%	FR
EXAIL TECHNOLOGIES XPAR EUR	Manufacture of machinery and equipment n.e.c.	2.8%	FR
JDC GROUP AG XETR EUR	Activities auxiliary to financial services and insurance activities	1.92%	DE
VAN LANSCHOT KEMPEN NV XAMS EUR	Activities auxiliary to financial services and insurance activities	1.85%	NL
CEWE STIFTUNG & CO KGAA XETR EUR	Other professional, scientific and technical activities	1.83%	DE
MLP SE XETR EUR	Activities auxiliary to financial services and insurance activities	1.66%	DE
INTEA FASTIGHETER AB XSTO SEK	Real estate activities	1.61%	SE
CONSTRUCC Y AUX DE FERROCARR X MAD EUR	Manufacture of other transport equipment	1.58%	ES

BHG GROUP AB XSTO SEK	Retail trade, except of motor vehicles and motorcycles	1.3%	SE
MATAS A/S XCSE DKK	Retail trade, except of motor vehicles and motorcycles	1.28%	DK

The portfolio proportions of investments presented above are an average over the reference period.

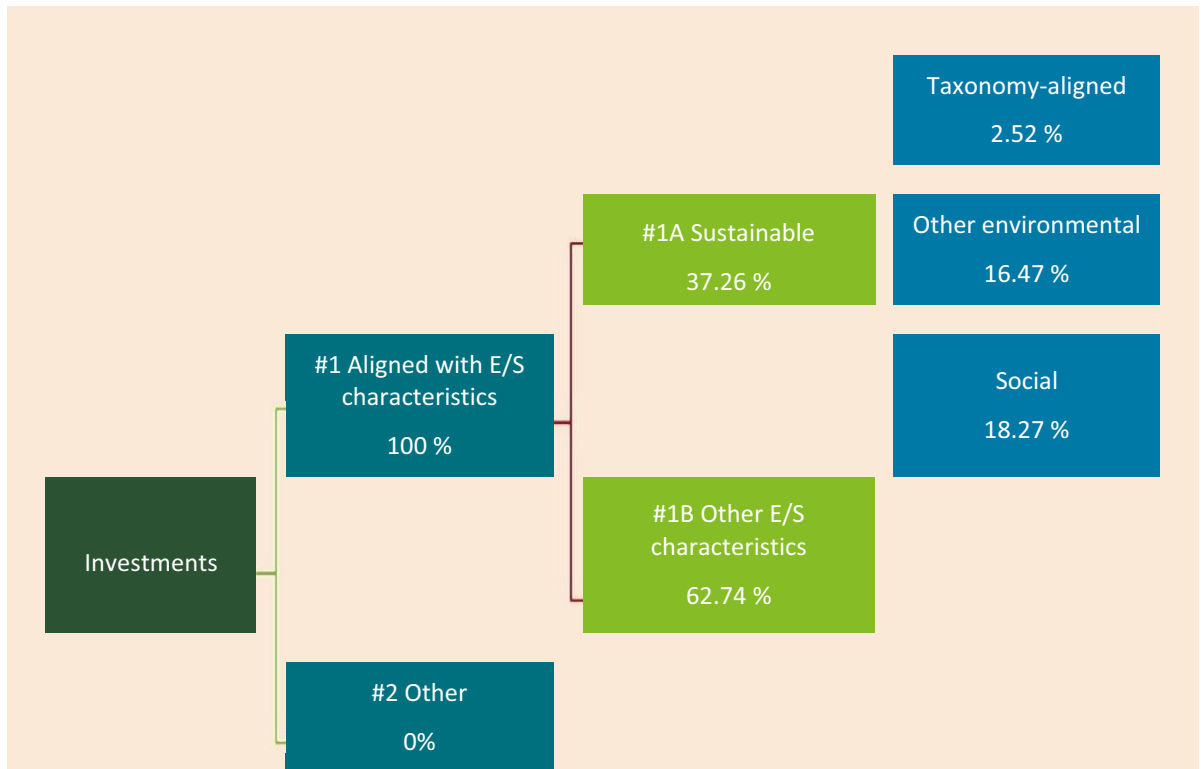

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	9.79%
Manufacture of machinery and equipment n.e.c.	8.92%
Manufacture of computer, electronic and optical products	8.62%
Activities auxiliary to financial services and insurance activities	6.52%
Manufacture of other transport equipment	5.44%

Retail trade, except of motor vehicles and motorcycles	5.24%
Publishing activities	4.22%
Other manufacturing	4.12%
Wholesale trade, except of motor vehicles and motorcycles	3.69%
Scientific research and development	3.26%
Waste collection, treatment and disposal activities, materials recovery	3.09%
Other	3.05%
Computer programming, consultancy and related activities	2.87%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.46%
Real estate activities	2.29%
Manufacture of paper and paper products	2.16%
Human health activities	1.85%
Other professional, scientific and technical activities	1.83%
Manufacture of electrical equipment	1.67%
Manufacture of chemicals and chemical products	1.62%
Office administrative, office support and other business support activities	1.52%
Manufacture of motor vehicles, trailers and semi-trailers	1.5%
Civil engineering	1.21%
Architectural and engineering activities, technical testing and analysis	1.17%
Construction of buildings	1.15%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	1.14%
Information service activities	1.11%
Warehousing and support activities for transportation	1.06%
Education	0.99%
Mining of metal ores	0.99%
Sports activities and amusement and recreation activities	0.69%
Manufacture of textiles	0.68%
Manufacture of other non-metallic mineral products	0.61%
Electricity, gas, steam and air conditioning supply	0.6%
Manufacture of fabricated metal products, except machinery and equipment	0.44%
Motion picture, video and television programme production, sound recording and music publishing activity	0.43%
Manufacture of rubber and plastic products	0.39%
Manufacture of food products	0.36%
Residential care activities	0.28%
Manufacture of wearing apparel	0.28%
Employment activities	0.26%
Manufacture of basic metals	0.24%
Accommodation	0.18%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

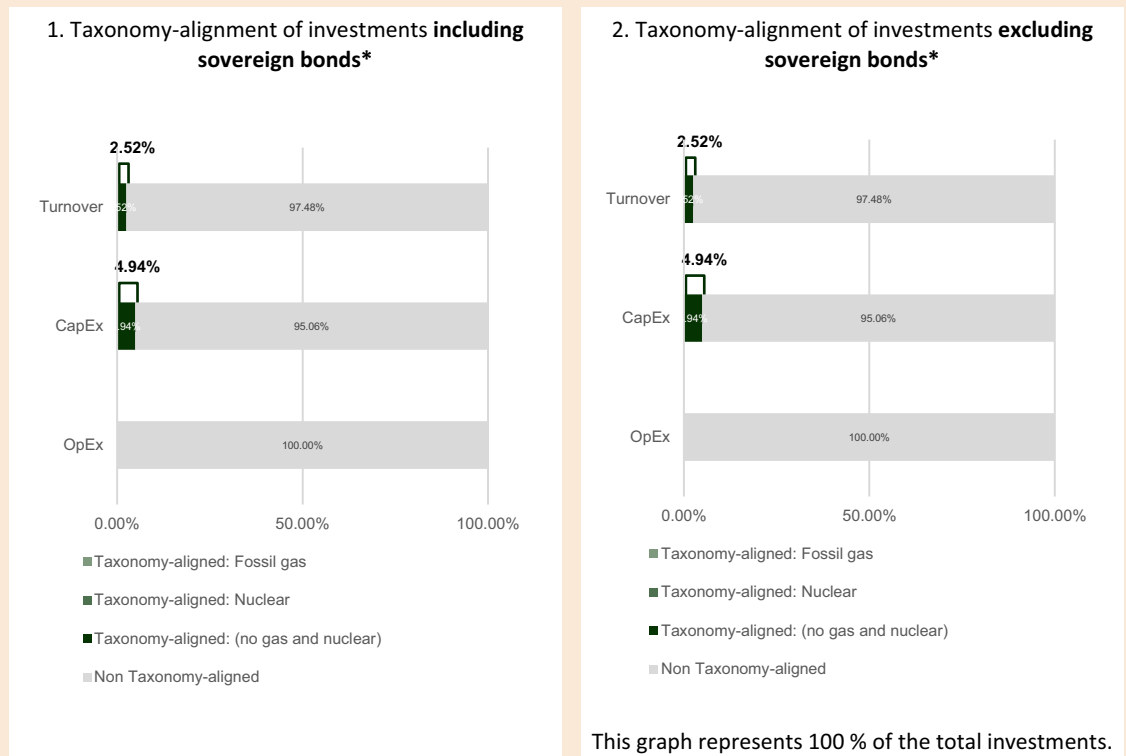

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	2.52%	0.21%	0.00%	0.00%
CapEx-based	4.94%	0.29%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 16.47% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 18.27% of sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product's investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Europe Real Estate (the “Financial Product”) **Legal Entity Identifier:** 2138008R5O4FRND4OA57

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 82.8 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.76 / 10	7.67 / 10	99.93 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	7.67 / 10	7.54 / 10	99.71 %
ESG Score	2023	8.27 / 10	7.66 / 10	98.85 %
ESG Score	2022	7.92 / 10	7.46 / 10	98.48 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	25	25

For Sovereign and supnationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 25 Relative number: 25

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 625.249	Scope 1: 92	Scope 1: 92
Ecosystem protection & Deforestation policy			Scope 2: 878.466	Scope 2: 92	Scope 2: 92
			Scope 3: 7561.672	Scope 3: 86	Scope 3: 86
			Scope 1+2: 1503.715	Scope 1+2: 92	Scope 1+2: 92
			Scope 1+2+3: 8961.044	Scope 1+2+3: 86	Scope 1+2+3: 86
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 4.208	Scope 1+2: 47	Scope 1+2: 47
Ecosystem protection & Deforestation policy			Scope 1+2+3: 23.397	Scope 1+2+3: 86	Scope 1+2+3: 86
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 367.837	Scope 1+2+3: 86	Scope 1+2+3: 86
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	0.02	92	92
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 39.86 Energy Production: 77.6	Energy Consumption: 92 Energy Production: 0	Energy Consumption: 92 Energy Production: 0
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	7.61	92	92
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	94	94
Voting and Engagement policy with systematic voting criteria linked	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies,	41.51	92	92

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

with board gender diversity		expressed as a percentage of all board members (%)			
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	25	25

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 25 Relative number: 25

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
UNIBAIL-RODAMCO-WESTFIELD XPAR EUR	Real estate activities	7.93%	FR
MERLIN PROPERTIES SOCIMI SA XMAD EUR	Real estate activities	5.71%	ES
BRITISH LAND CO PLC XLON GBP	Real estate activities	5.18%	GB
SEGRO PLC XLON GBP	Real estate activities	4.58%	GB
VONOVIA SE XETR EUR	Real estate activities	4.53%	DE
LEG IMMOBILIEN SE XETR EUR	Real estate activities	4.33%	DE
PSP SWISS PROPERTY AG-REG XSWX CHF	Real estate activities	3.89%	CH
SAFESTORE HOLDINGS PLC XLON GBP	Real estate activities	3.59%	GB
TAG IMMOBILIEN AG XETR EUR	Real estate activities	3.31%	DE
MERCIALYS XPAR EUR	Real estate activities	3.16%	FR
TRITAX BIG BOX REIT PLC XLON GBP	Real estate activities	2.94%	GB
CTP NV XAMS EUR	Real estate activities	2.89%	NL
CATENA AB XSTO SEK	Real estate activities	2.82%	SE
UNITE GROUP PLC/THE XLON GBP	Real estate activities	2.71%	GB
FASTIGHETS AB BALDER-B SHRS XSTO SEK	Real estate activities	2.65%	SE

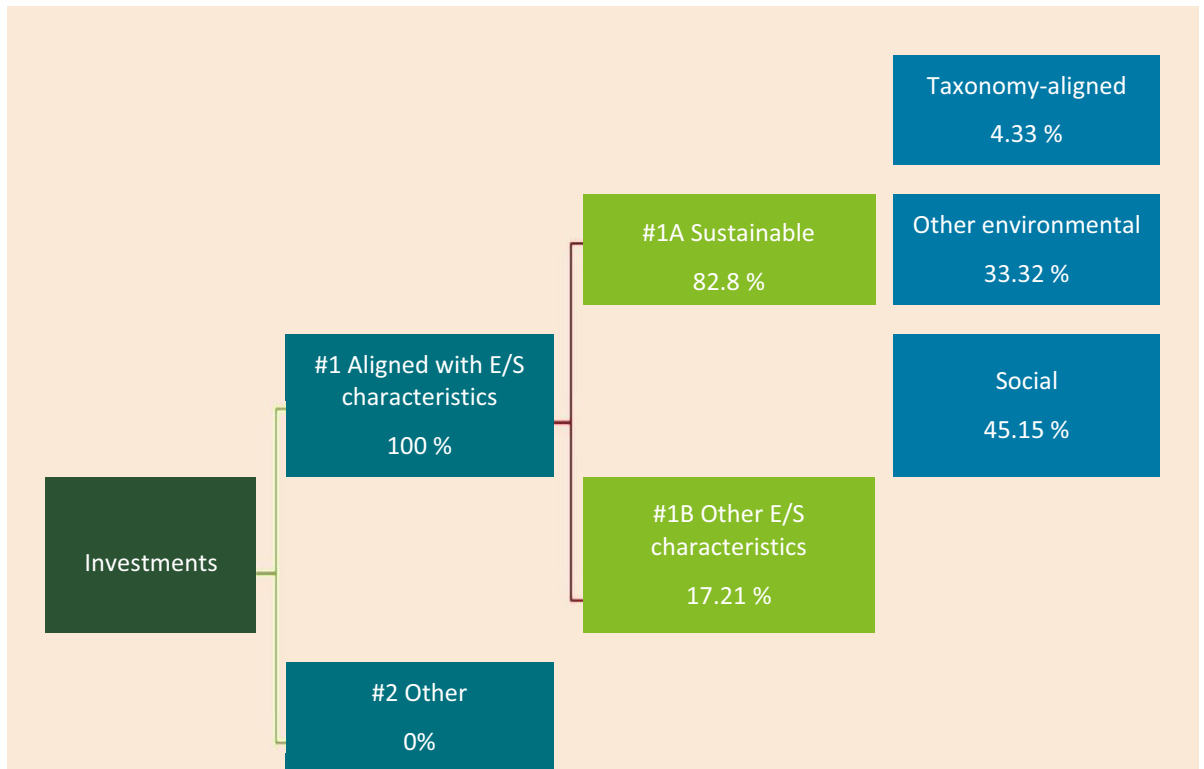

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Real estate activities	99.16%
Financial service activities, except insurance and pension funding	0.42%
Civil engineering	0.25%
Other	0.17%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	4.33%	5.41%	0.00%	0.00%
CapEx-based	12.93%	9.31%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 33.32% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 45.15% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity related instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and/or for diversification and/or hedging purposes.

Environmental or social safeguards are applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Europe Small Cap (the “Financial Product”) **Legal Entity Identifier:** 2138008MKL83N9YYJ11

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 70.68 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their E Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on an ESG Key Performance Indicator that is Carbon Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis and ii) 90% for the Carbon Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	67.01 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	137.47 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	82.71 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	89.35 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	160.53 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	99.3 %
Carbon intensity	2023	119.31 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	170.4 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.96 %
Water Intensity	2023	1184.91 Thousands of cubic meters for corporates	7683.22 Thousands of cubic meters for corporates	97.62 %
Carbon intensity	2022	124.38 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	161.53 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.49 %
Water intensity	2022	2116.35 Thousands of cubic meters for corporates	23449.42 Thousands of cubic meters for corporates	98.49 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	34.96 %	96	97
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	11.19%	83	84
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	41.94	96	97
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of	0	28	28

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

		controversial weapons (% of AuM)			
--	--	----------------------------------	--	--	--

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance blacklist based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 5246.764	Scope 1: 97	Scope 1: 97
Ecosystem protection & Deforestation policy			Scope 2: 1275.313	Scope 2: 97	Scope 2: 97
			Scope 3: 104738.109	Scope 3: 89	Scope 3: 90
			Scope 1+2: 6522.077	Scope 1+2: 97	Scope 1+2: 97
			Scope 1+2+3: 111098.391	Scope 1+2+3: 89	Scope 1+2+3: 90
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 20.45	Scope 1+2: 49	Scope 1+2: 49
Ecosystem protection & Deforestation policy			Scope 1+2+3: 577.97	Scope 1+2+3: 89	Scope 1+2+3: 90
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1299.198	Scope 1+2+3: 89	Scope 1+2+3: 89
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	6.31	97	97

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 53.25 Energy Production: 90.24	Energy Consumption: 92 Energy Production: 1	Energy Consumption: 93 Energy Production: 1
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	28.39	71	72
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	99	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	41.94	96	97
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	28	28

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets,

depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. “Eligible assets without available data” refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies’ revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
SCOR SE XPAR EUR	Insurance, reinsurance and pension funding, except compulsory social security	2.81%	FR
BELLWAY PLC XLON GBP	Construction of buildings	2.76%	GB
BANKINTER SA XMAD EUR	Financial service activities, except insurance and pension funding	2.75%	ES
ELIA GROUP SA/NV XBRU EUR	Electricity, gas, steam and air conditioning supply	2.61%	BE
ACKERMANS & VAN HAAREN XBRU EUR	Civil engineering	2.55%	BE
SUBSEA 7 SA XOSL NOK	Mining support service activities	2.55%	GB
ROYAL UNIBREW XCSE DKK	Manufacture of beverages	2.54%	DK
WIENERBERGER AG XWBO EUR	Manufacture of other non-metallic mineral products	2.41%	AT
ASR NEDERLAND NV XAMS EUR	Insurance, reinsurance and pension funding, except compulsory social security	2.37%	NL
MERLIN PROPERTIES SOCIMI SA XMAD EUR	Real estate activities	2.31%	ES
STOREBRAND ASA XOSL NOK	Insurance, reinsurance and pension funding, except compulsory social security	2.31%	NO
FINECOBANK SPA MTAA EUR	Financial service activities, except insurance and pension funding	2.2%	IT
SWECO AB-B SHS XSTO SEK	Architectural and engineering activities, technical testing and analysis	2.14%	SE
INTERPUMP GROUP SPA MTAA EUR	Manufacture of machinery and equipment n.e.c.	2.13%	IT
AXA Tresor Court Terme Capitalisation EUR	Financial service activities, except insurance and pension funding	2.11%	FR

The portfolio proportions of investments presented above are an average over the reference period.

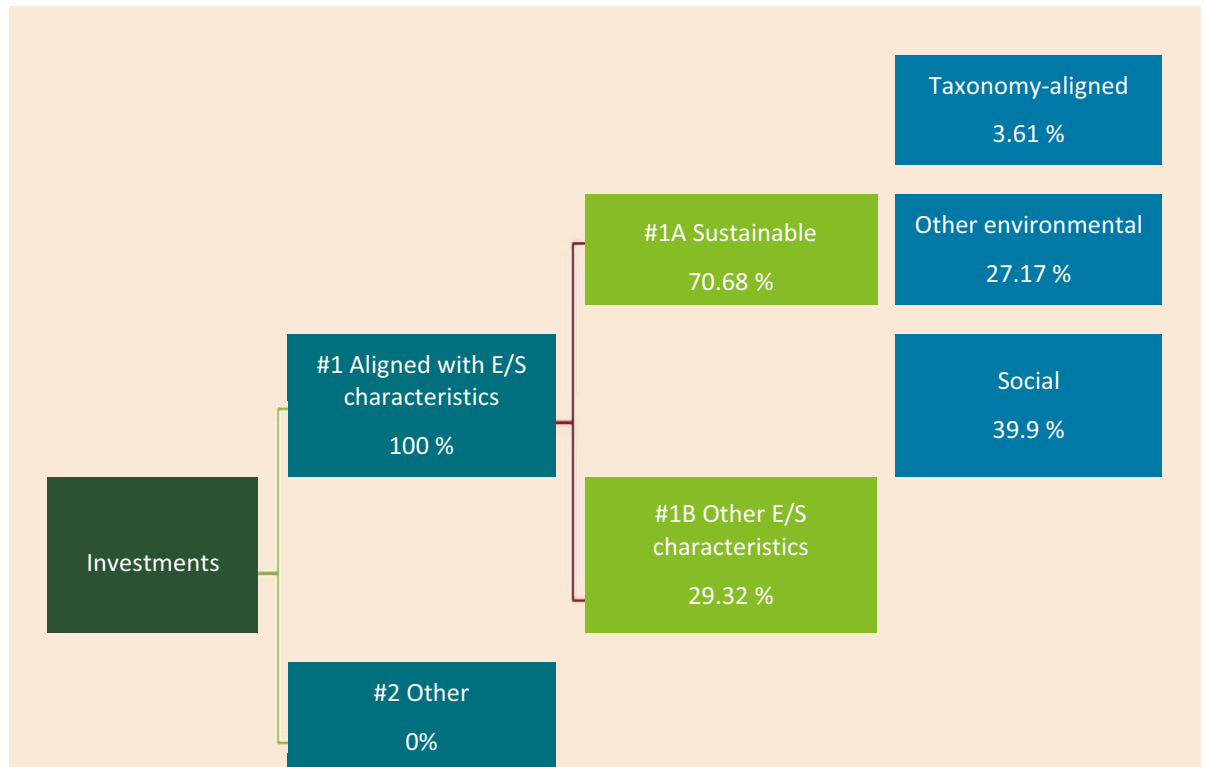

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Manufacture of machinery and equipment n.e.c.	11.67%
Financial service activities, except insurance and pension funding	11.58%
Insurance, reinsurance and pension funding, except compulsory social security	7.5%
Real estate activities	5.59%
Architectural and engineering activities, technical testing and analysis	5.5%

Civil engineering	5.06%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.31%
Electricity, gas, steam and air conditioning supply	3.8%
Manufacture of computer, electronic and optical products	3.64%
Computer programming, consultancy and related activities	3.55%
Information service activities	3.18%
Activities auxiliary to financial services and insurance activities	3.05%
Manufacture of other non-metallic mineral products	2.85%
Manufacture of chemicals and chemical products	2.78%
Construction of buildings	2.76%
Mining support service activities	2.55%
Manufacture of beverages	2.54%
Manufacture of electrical equipment	2.29%
Publishing activities	2.21%
Retail trade, except of motor vehicles and motorcycles	2.12%
Postal and courier activities	2.08%
Other manufacturing	1.61%
Telecommunications	1.47%
Manufacture of fabricated metal products, except machinery and equipment	1.29%
Warehousing and support activities for transportation	1.28%
Manufacture of food products	1.26%
Gambling and betting activities	0.74%
Manufacture of motor vehicles, trailers and semi-trailers	0.67%
Manufacture of basic metals	0.54%
Wholesale trade, except of motor vehicles and motorcycles	0.49%
Other	0.04%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
 In fossil gas In nuclear energy
 No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

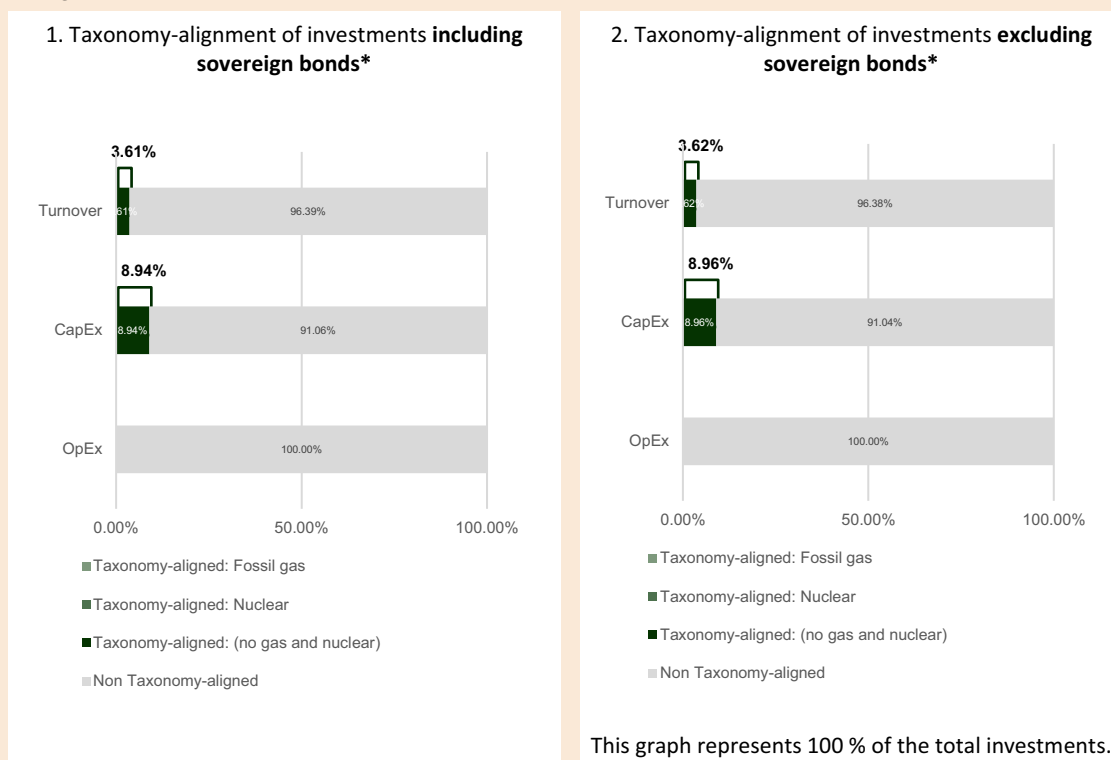

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	3.61%	4.07%	0.00%	0.00%
CapEx-based	8.94%	3.92%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 27.17% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 39.9% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

Through the year, the Financial Product has adjusted its SRI strategy by removing the outperformance objective on one sustainability KPI, as described in the relative SFDR Annex of the prospectus of the Financial Product.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product Name: AXA World Funds Evolving Trends (the “Financial Product”)

Legal Entity Identifier: 213800XUJVRQ1XWNYI35

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="checkbox"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 75.85 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human rights violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	107.56 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	128.71 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	82.86 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	120 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	160.96 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	100 %
Carbon intensity	2023	174.05 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	173.19 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.84 %
Water Intensity	2023	1371.14 Thousands of cubic meters for corporates	5549.86 Thousands of cubic meters for corporates	99.84 %
Carbon intensity	2022	219.03 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	238.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.66 %
Water intensity	2022	2107.87 Thousands of cubic meters for corporates	11618.89 Thousands of cubic meters for corporates	99.66 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	30	31

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 6636.468	Scope 1: 97	Scope 1: 99
Ecosystem protection & Deforestation policy			Scope 2: 2509.768	Scope 2: 97	Scope 2: 99
			Scope 3: 52467.684	Scope 3: 84	Scope 3: 86
			Scope 1+2: 9146.234	Scope 1+2: 97	Scope 1+2: 99
			Scope 1+2+3: 61076.969	Scope 1+2+3: 84	Scope 1+2+3: 86
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 17.181	Scope 1+2: 49	Scope 1+2: 50
Ecosystem protection & Deforestation policy			Scope 1+2+3: 117.629	Scope 1+2+3: 84	Scope 1+2+3: 86
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 649.455	Scope 1+2+3: 84	Scope 1+2+3: 86
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	5.52	97	99
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 47.13 Energy Production: 48.24	Energy Consumption: 94 Energy Production: 3	Energy Consumption: 96 Energy Production: 3
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	43.95	88	90

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	98	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	34.01	97	99
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	30	31

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	5.68%	US
ALPHABET INC-CL C XNGS USD	Information service activities	4.77%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	4.43%	US
MICROSOFT CORP XNGS USD	Publishing activities	4.32%	US
BROADCOM INC XNGS USD	Manufacture of computer, electronic and optical products	3.02%	US
AMERICAN EXPRESS CO XNYS USD	Financial service activities, except insurance and pension funding	2.81%	US
Portfolio 36445 USD SET SSD	Other	2.55%	N/A
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	2.45%	US
SERVICENOW INC XNYS USD	Publishing activities	2.43%	US
SIEMENS AG-REG XETR EUR	Manufacture of electrical equipment	2.41%	DE
NATIONAL GRID PLC XLON GBP	Electricity, gas, steam and air conditioning supply	2.38%	GB
REPUBLIC SERVICES INC XNYS USD	Waste collection, treatment and disposal activities, materials recovery	2.36%	US
IBERDROLA SA XMAD EUR	Electricity, gas, steam and air conditioning supply	2.04%	ES
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	2.03%	US
BOSTON SCIENTIFIC CORP XNYS USD	Manufacture of computer, electronic and optical products	2%	US

The portfolio proportions of investments presented above are an average over the reference period.

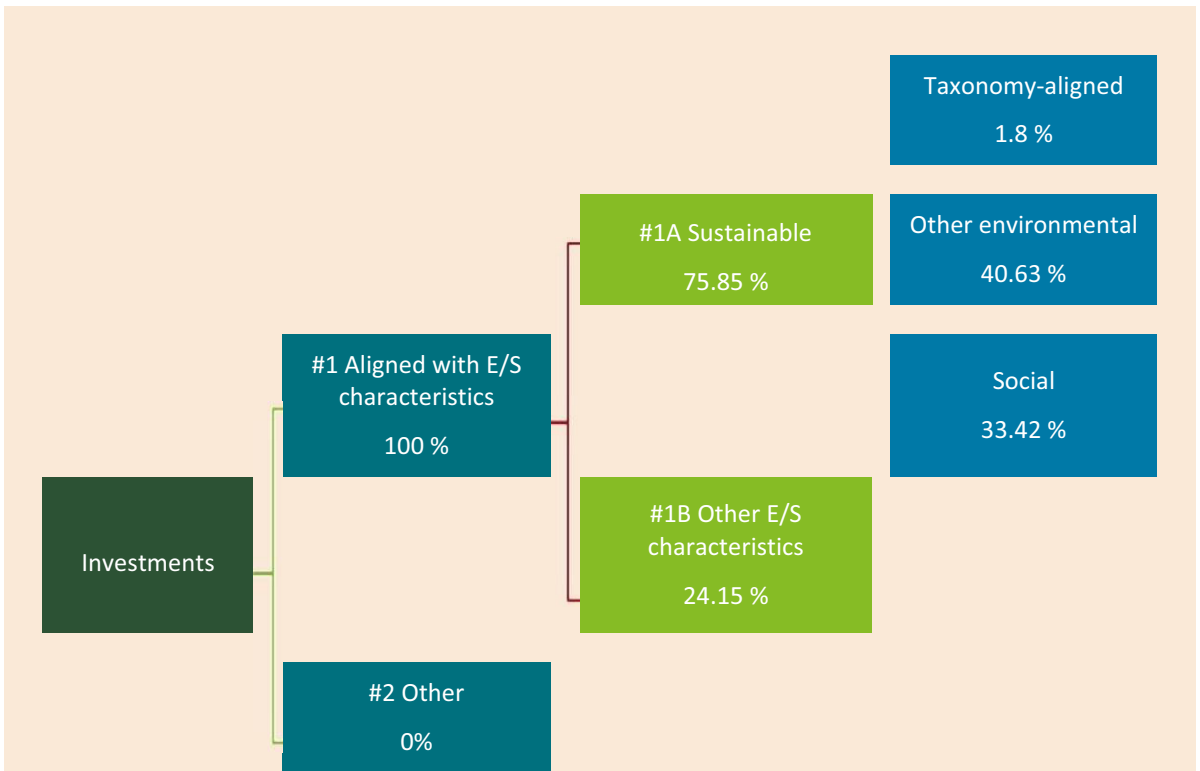

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Manufacture of computer, electronic and optical products	18.64%
Publishing activities	12.44%
Information service activities	10.08%
Activities auxiliary to financial services and insurance activities	8.14%
Manufacture of machinery and equipment n.e.c.	6.87%

Electricity, gas, steam and air conditioning supply	5.53%
Financial service activities, except insurance and pension funding	5.25%
Retail trade, except of motor vehicles and motorcycles	4.86%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.7%
Other manufacturing	4.32%
Manufacture of electrical equipment	4.22%
Manufacture of chemicals and chemical products	3.32%
Waste collection, treatment and disposal activities, materials recovery	2.36%
Other	2.17%
Insurance, reinsurance and pension funding, except compulsory social security	1.97%
Manufacture of leather and related products	1.63%
Real estate activities	1.34%
Manufacture of other non-metallic mineral products	1.01%
Motion picture, video and television programme production, sound recording and music publishing activity	0.96%
Manufacture of rubber and plastic products	0.18%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

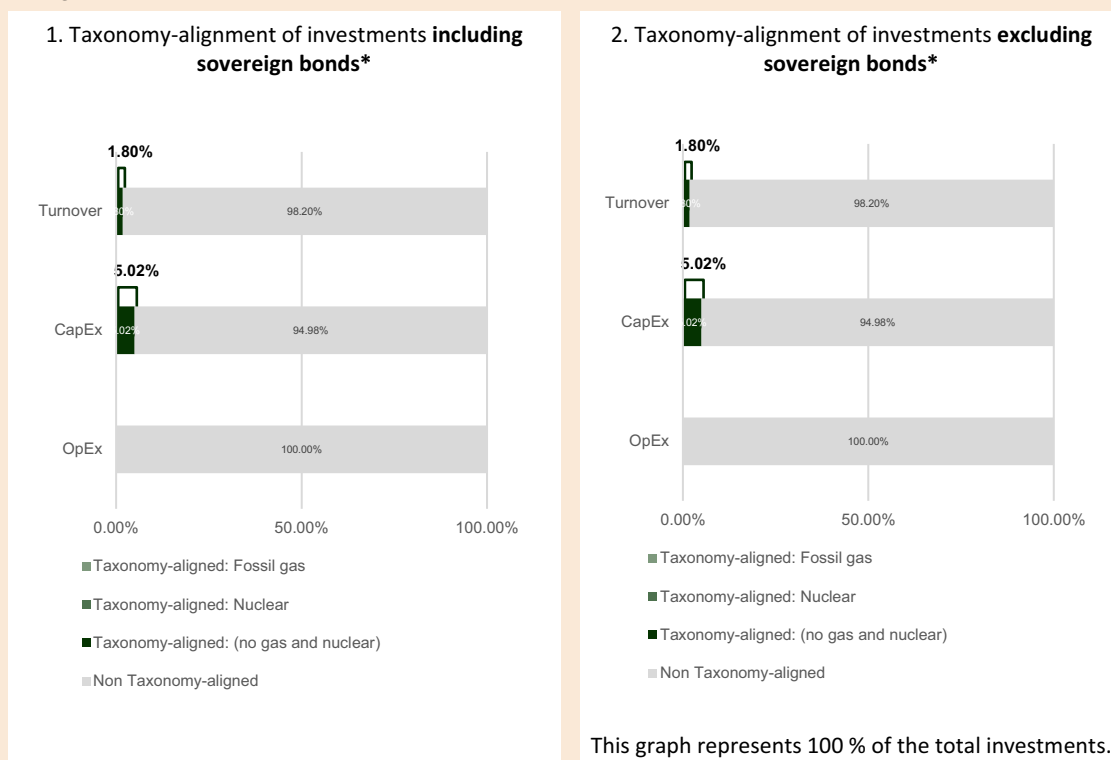

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	1.80%	1.22%	0.00%	0.00%
CapEx-based	5.02%	1.95%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 40.63% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 33.42% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

Through the year, the Financial Product has removed its adherence to the French Label ISR as well as its SRI strategy and as described in the relative SFDR Annex of the prospectus of the Financial Product.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Buy and **Legal Entity Identifier:** 213800D3RM8S2NWSUD74
 Maintain Credit (the “Financial Product”)

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 64.46 % of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	7.13 / 10	6.78 / 10	99.94 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	7.16 / 10	6.76 / 10	99.99 %
ESG Score	2023	7.26 / 10	6.78 / 10	99.72 %
ESG Score	2022	7.17 / 10	6.67 / 10	98.86 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 2949.49 Scope 2: 736.921 Scope 3: 32126.631 Scope 1+2: 3686.411 Scope 1+2+3: 35399.059	Scope 1: 94 Scope 2: 94 Scope 3: 80 Scope 1+2: 94 Scope 1+2+3: 80	Scope 1: 97 Scope 2: 97 Scope 3: 83 Scope 1+2: 97 Scope 1+2+3: 83

Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	13.58	94	97
Climate Risk policy (engagement only)	PAI 5 : Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 58.86 Energy Production: 74.11	Energy Consumption: 73 Energy Production: 5	Energy Consumption: 76 Energy Production: 5
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector (GWh/€M)	Sector NACE B: 0.202 Sector NACE C: 0.343 Sector NACE D: 1.724 Sector NACE E: 0.571 Sector NACE G: 0.047 Sector NACE H: 1.12 Sector NACE L: 0.253	Sector NACE A: 0 Sector NACE B: 1 Sector NACE C: 12 Sector NACE D: 7 Sector NACE E: 1 Sector NACE F: 0 Sector NACE G: 3 Sector NACE H: 5 Sector NACE L: 12	Sector NACE B: 1 Sector NACE C: 12 Sector NACE D: 8 Sector NACE E: 1 Sector NACE G: 3 Sector NACE H: 5 Sector NACE L: 13
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	36.57	90	94
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested,	0.012	21	22

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

		expressed as a weighted average (t/€M)			
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	0.781	43	44

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	96	100
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	40.02 %	92	95
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	14.4%	87	90
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	36.82	75	78
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	27	28

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 2 Relative number: 2	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 2949.49	Scope 1: 94	Scope 1: 97
Ecosystem protection & Deforestation policy			Scope 2: 736.921	Scope 2: 94	Scope 2: 97
			Scope 3: 32126.631	Scope 3: 80	Scope 3: 83
			Scope 1+2: 3686.411	Scope 1+2: 94	Scope 1+2: 97
			Scope 1+2+3: 35399.059	Scope 1+2+3: 80	Scope 1+2+3: 83
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 82.295	Scope 1+2: 50	Scope 1+2: 52
Ecosystem protection & Deforestation policy			Scope 1+2+3: 495.888	Scope 1+2+3: 80	Scope 1+2+3: 83
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1540.095	Scope 1+2+3: 58	Scope 1+2+3: 60
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	13.58	94	97
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 58.86 Energy Production: 74.11	Energy Consumption: 73 Energy Production: 5	Energy Consumption: 76 Energy Production: 5
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	36.57	90	94

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	96	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	36.82	75	78
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	27	28

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 2 Relative number: 2	Absolute number: 100 Relative number: 100

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
B 0 - 22/01/2026	Public administration and defence, compulsory social security	1.47%	US
EXR 5.9% - 15/01/2031 Call	Real estate activities	0.78%	US
ASSGEN 2.429% - 14/07/2031 Call	Insurance, reinsurance and pension funding, except compulsory social security	0.77%	IT
AMCR 5.65% - 15/01/2034 Call	Manufacture of rubber and plastic products	0.76%	US
BCICI 2.875% - 14/10/2031 Call	Financial service activities, except insurance and pension funding	0.76%	CL
URWFP 3.5% - 15/06/2029 Call	Real estate activities	0.75%	US
BNCHIL 2.99% - 09/12/2031 Call	Financial service activities, except insurance and pension funding	0.75%	CL
DELL 5.75% - 01/02/2033 Call	Manufacture of computer, electronic and optical products	0.75%	US
OKE 6.05% - 01/09/2033 Call	Land transport and transport via pipelines	0.75%	US
PNC 5.068% Var - 24/01/2034 Call	Financial service activities, except insurance and pension funding	0.75%	US
RBIIV 4.625% Var - 21/08/2029 Call	Financial service activities, except insurance and pension funding	0.74%	AT
TRNIM 3.875% - 24/07/2033 Call	Electricity, gas, steam and air conditioning supply	0.74%	IT
MFCFN 3.703% - 16/03/2032 Call	Insurance, reinsurance and pension funding, except compulsory social security	0.74%	CA
MU 5.8% - 15/01/2035 Call	Manufacture of computer, electronic and optical products	0.74%	US
RSG 2.375% - 15/03/2033 Call	Waste collection, treatment and disposal activities, materials recovery	0.74%	US

The portfolio proportions of investments presented above are an average over the reference period.

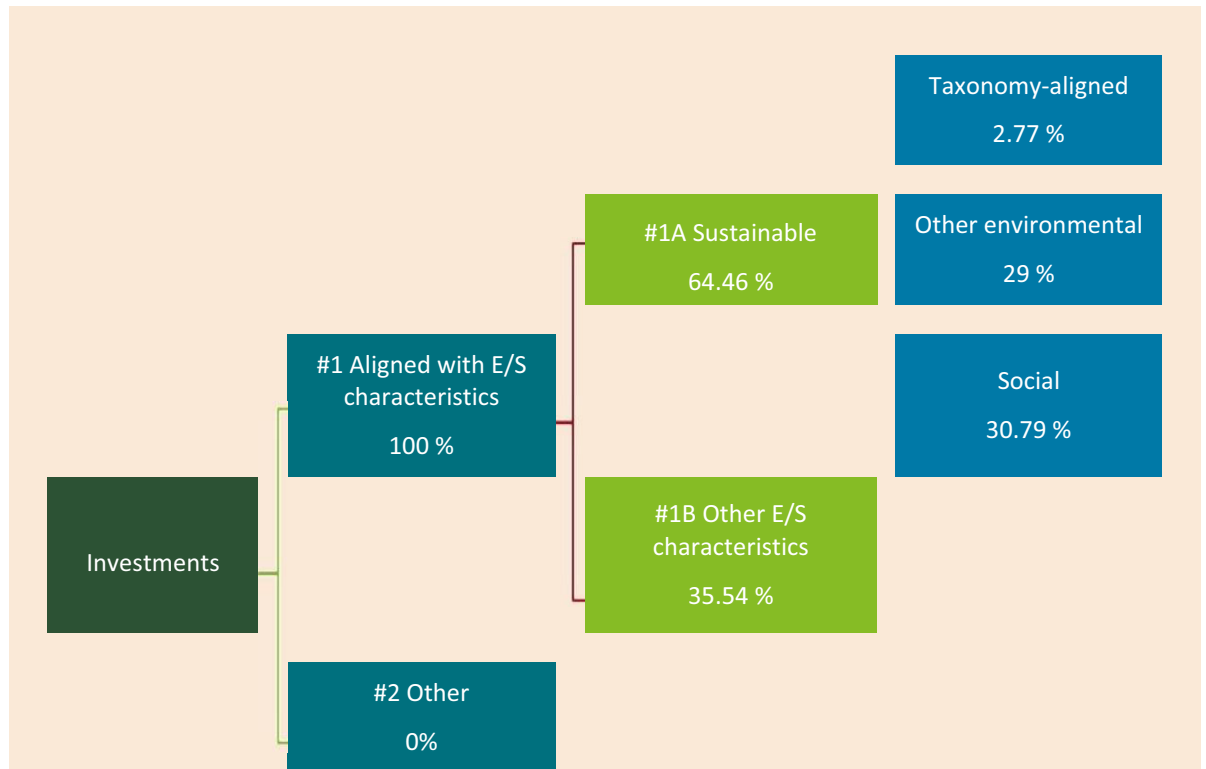

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	26.9%
Electricity, gas, steam and air conditioning supply	9.97%
Real estate activities	5.99%
Telecommunications	5.2%
Insurance, reinsurance and pension funding, except compulsory social security	5.13%

Manufacture of motor vehicles, trailers and semi-trailers	3.31%
Manufacture of coke and refined petroleum products	3.2%
Activities auxiliary to financial services and insurance activities	3.09%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.87%
Manufacture of computer, electronic and optical products	2.7%
Human health activities	2.53%
Manufacture of food products	2.49%
Land transport and transport via pipelines	2.33%
Public administration and defence, compulsory social security	2.19%
Retail trade, except of motor vehicles and motorcycles	2.02%
Publishing activities	2%
Rental and leasing activities	1.86%
Manufacture of paper and paper products	1.64%
Extraction of crude petroleum and natural gas	1.36%
Warehousing and support activities for transportation	1.35%
Manufacture of rubber and plastic products	1.25%
Information service activities	1.03%
Manufacture of chemicals and chemical products	0.91%
Manufacture of other non-metallic mineral products	0.89%
Wholesale trade, except of motor vehicles and motorcycles	0.85%
Manufacture of electrical equipment	0.84%
Waste collection, treatment and disposal activities, materials recovery	0.74%
Water collection, treatment and supply	0.71%
Scientific research and development	0.71%
Other manufacturing	0.7%
Manufacture of beverages	0.6%
Civil engineering	0.59%
Motion picture, video and television programme production, sound recording and music publishing activity	0.56%
Other	0.51%
Manufacture of basic metals	0.49%
Manufacture of other transport equipment	0.35%
Manufacture of wearing apparel	0.14%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

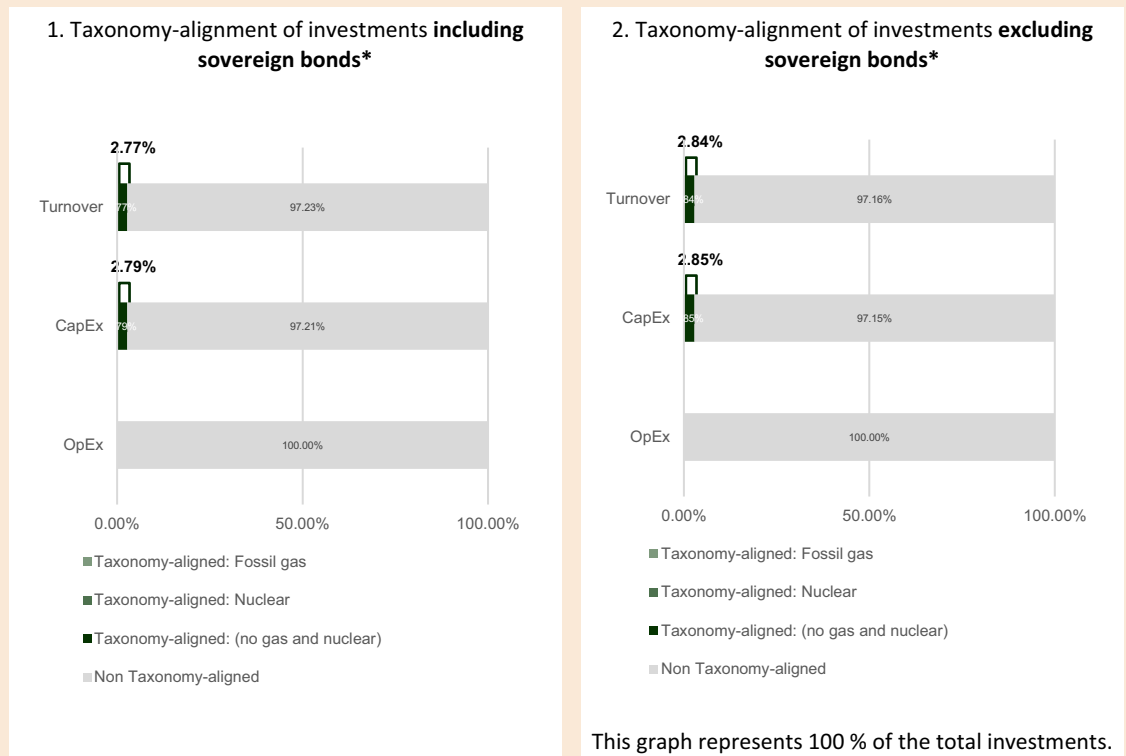

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	2.77%	4.58%	0.00%	0.00%
CapEx-based	2.79%	4.24%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 29% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 30.79% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Convertibles (the “Financial Product”)

Legal Entity Identifier: 213800CD6MRQ8HCAOB54

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 51.97 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

During the reference period, the Financial Product has applied a ESG Score Upgrade Approach approach on its investment universe, according to which the ESG scoring of the Financial Product has been higher than the scoring of the investment universe after removing at least the 20% worst ESG Scores, on a weighted average basis.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	128.54 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	416.8 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	83.15 %
Water Intensity	14381.43 Thousands of cubic meters per million \$ of revenue (for corporates only)	30335.71 Thousands of cubic meters per million \$ of revenue (for corporates only)	97.57 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	159.44 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	357.28 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	96.36 %
Water Intensity	2024	11615.73 Thousands of cubic meters per million \$ of revenue (for corporates only)	20806.51 Thousands of cubic meters per million \$ of revenue (for corporates only)	96.36 %
Carbon intensity	2023	196.37 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	401.98 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.69 %
Water Intensity	2023	18044 Thousands of cubic meters for corporates	54980.51 Thousands of cubic meters for corporates	95.68 %
Carbon intensity	2022	154.67 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	372.98 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	96.03 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the "do not significantly harm" principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy

alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 50 Relative number: 50

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 3596.24	Scope 1: 93 Scope 2: 93 Scope 3: 82 Scope 1+2: 93 Scope 1+2+3: 82	Scope 1: 97 Scope 2: 97 Scope 3: 85 Scope 1+2: 97 Scope 1+2+3: 85
Ecosystem protection & Deforestation policy			Scope 2: 3403.313		
			Scope 3: 80590.156 Scope 1+2: 6999.554 Scope 1+2+3: 87279.266

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible

assets without available data” refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies’ revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
Portfolio 37299 EUR SET SXX	Other	2.86%	N/A
SUFP 1.625% - 28/06/2031 Conv	Manufacture of electrical equipment	2.5%	FR
LEGR 1% - 04/09/2030 Conv	Real estate activities	2.39%	DE
MTN 0 - 01/01/2026 Conv	Sports activities and amusement and recreation activities	2.34%	US
WELL 2.75% - 15/05/2028 Conv	Real estate activities	2.07%	US

NEE 3% - 01/03/2027 Conv	Electricity, gas, steam and air conditioning supply	1.52%	US

The portfolio proportions of investments presented above are an average over the reference period.

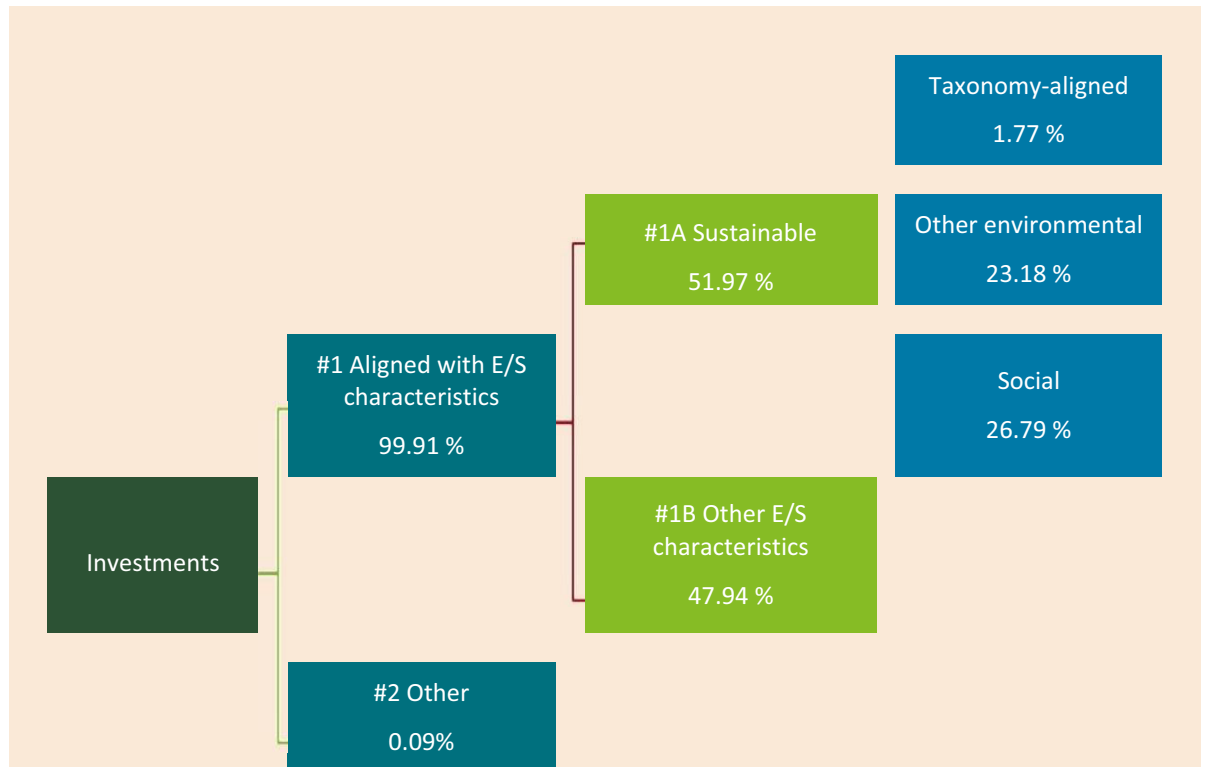

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Publishing activities	15.74%
Real estate activities	8.83%
Manufacture of computer, electronic and optical products	8.64%
Information service activities	8.28%
Financial service activities, except insurance and pension funding	7.39%

Retail trade, except of motor vehicles and motorcycles	5.12%
Other	4.66%
Manufacture of electrical equipment	3.99%
Manufacture of machinery and equipment n.e.c.	3.69%
Electricity, gas, steam and air conditioning supply	3.53%
Manufacture of other transport equipment	3.21%
Scientific research and development	3.19%
Civil engineering	2.66%
Activities auxiliary to financial services and insurance activities	2.56%
Mining of metal ores	2.54%
Sports activities and amusement and recreation activities	2.34%
Insurance, reinsurance and pension funding, except compulsory social security	1.97%
Manufacture of motor vehicles, trailers and semi-trailers	1.95%
Telecommunications	1.66%
Other manufacturing	1.36%
Programming and broadcasting activities	1.11%
Manufacture of fabricated metal products, except machinery and equipment	1.1%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.94%
Computer programming, consultancy and related activities	0.92%
Manufacture of chemicals and chemical products	0.7%
Mining support service activities	0.63%
Mining of coal and lignite	0.56%
Public administration and defence, compulsory social security	0.34%
Creative, arts and entertainment activities	0.19%
Air transport	0.13%
Travel agency, tour operator reservation service and related activities	0.08%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	1.77%	1.64%	0.00%	0.00%
CapEx-based	3.91%	3.28%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 23.18% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 26.79% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.09% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product's investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product Name: AXA World Funds Global Emerging Markets Bonds (the “Financial Product”)

Legal Entity Identifier: 213800J9XC2E1QCKZD38

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="radio"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 11.91 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	4.12 / 10	3.82 / 10	95.85 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	4.13 / 10	3.85 / 10	95.41 %
ESG Score	2023	4.37 / 10	3.91 / 10	96.72 %
ESG Score	2022	4.31 / 10	3.83 / 10	94.71 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 6091.307 Scope 2: 1308.404 Scope 3: 38828.316 Scope 1+2: 7399.71 Scope 1+2+3: 44991.465	Scope 1: 16 Scope 2: 16 Scope 3: 13 Scope 1+2: 16 Scope 1+2+3: 13	Scope 1: 65 Scope 2: 65 Scope 3: 53 Scope 1+2: 65 Scope 1+2+3: 53

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 70 Relative number: 70	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 6091.307	Scope 1: 16	Scope 1: 65
Ecosystem protection & Deforestation policy			Scope 2: 1308.404	Scope 2: 16	Scope 2: 65
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/€M)	Scope 3: 38828.316	Scope 3: 13	Scope 3: 53
Ecosystem protection & Deforestation policy			Scope 1+2: 7399.71	Scope 1+2: 16	Scope 1+2: 65
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO ₂ e/€M)	Scope 1+2+3: 44991.465	Scope 1+2+3: 13	Scope 1+2+3: 53
Ecosystem protection & Deforestation policy			Scope 1+2: 82.235	Scope 1+2: 6	Scope 1+2: 24
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	Scope 1+2+3: 2118.569	Scope 1+2+3: 10	Scope 1+2+3: 40
Ecosystem protection & Deforestation policy			4.53	16	65
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	3.22	11	43
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	23	90
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	7	25

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
• AXA IM ESG Standards policy,	PAI 16: Sovereign Investee countries	Number of investee countries subject to	Absolute number: 0 Relative number: 0	Absolute number: 70 Relative number: 70	Absolute number: 100

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

through the exclusion of investee countries with severe social violations • Compliance black-list based on international and EU sanctions	subject to social violations	social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law			Relative number: 100

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
Portfolio 10705 USD SET SSX	Other	2.04%	N/A
MEX 3.5% - 12/02/2034 Call	Public administration and defence, compulsory social security	1.56%	MX

UAE 4.951% - 07/07/2052	Public administration and defence, compulsory social security	1.11%	AE

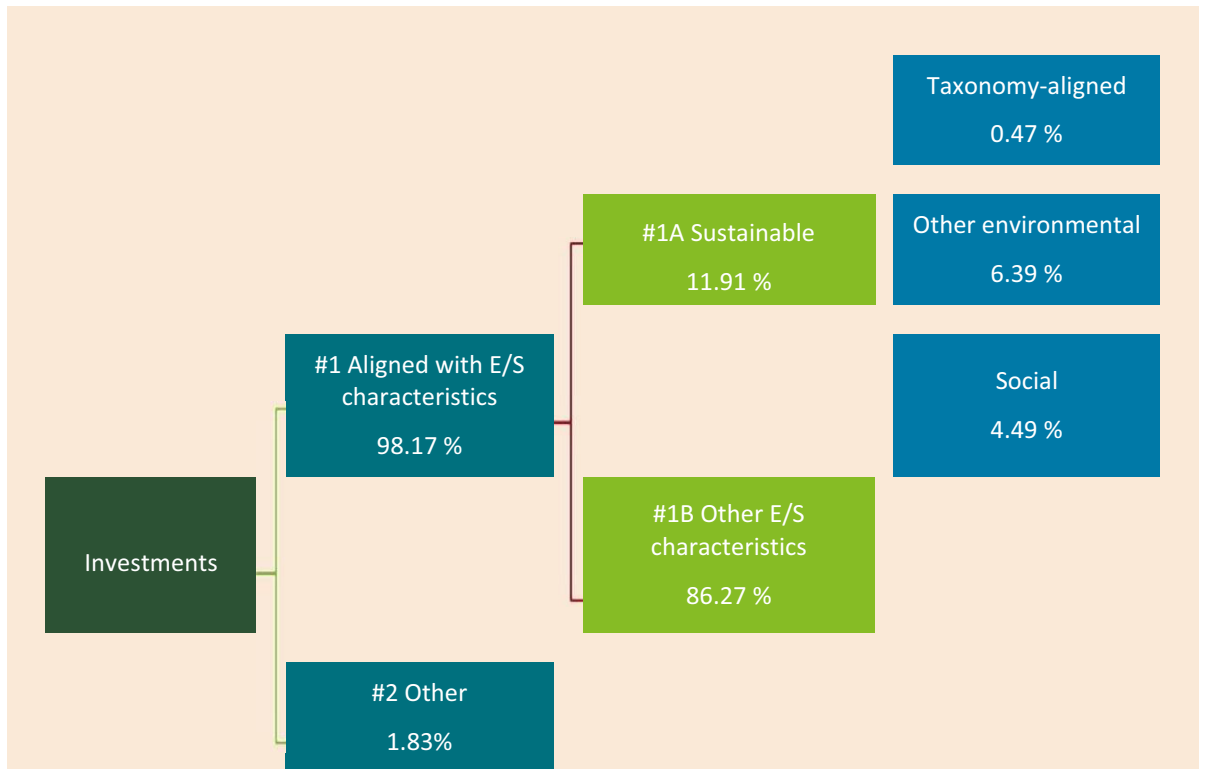

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	69.87%
Financial service activities, except insurance and pension funding	7.84%
Manufacture of coke and refined petroleum products	4.29%
Electricity, gas, steam and air conditioning supply	3.64%
Other	3.01%

Extraction of crude petroleum and natural gas	2.13%
Warehousing and support activities for transportation	1.96%
Mining of metal ores	1.24%
Telecommunications	1.06%
Information service activities	0.98%
Manufacture of basic metals	0.87%
Manufacture of computer, electronic and optical products	0.7%
Land transport and transport via pipelines	0.59%
Manufacture of motor vehicles, trailers and semi-trailers	0.49%
Gambling and betting activities	0.43%
Manufacture of chemicals and chemical products	0.31%
Manufacture of other non-metallic mineral products	0.28%
Manufacture of electrical equipment	0.24%
Activities auxiliary to financial services and insurance activities	0.06%
Activities of extraterritorial organisations and bodies	0%
Postal and courier activities	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

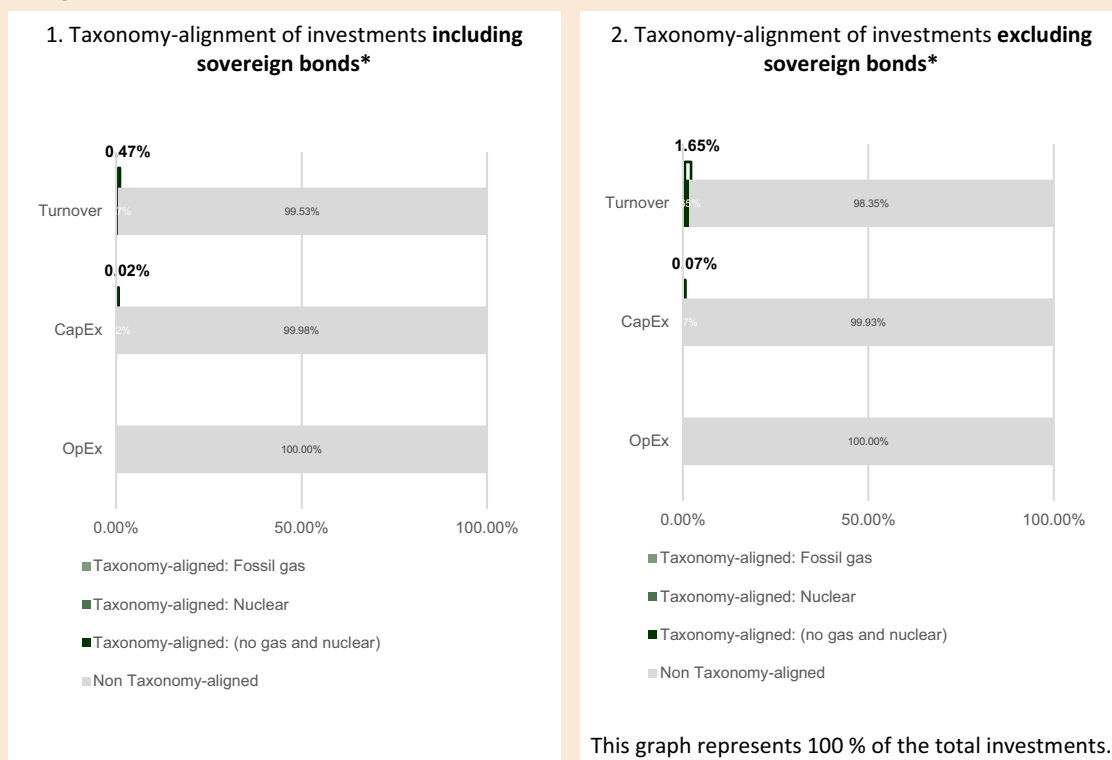

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 6.39% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 4.49% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 1.83% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Flexible **Legal Entity Identifier:** 213800GJYJUXTCJS5239
Property (the “Financial Product”)

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 77 % of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.81 / 10	6.4 / 10	96.8 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... **And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	6.77 / 10	6.17 / 10	97.25 %
ESG Score	2023	6.92 / 10	6.11 / 10	99.05 %
ESG Score	2022	6.65 / 10	6 / 10	98.93 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Social and Governance:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	93	96
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	62.17 %	89	92
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	19.11%	87	90
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	33.83	78	81
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	24	25

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 3 Relative number: 3	Absolute number: 75 Relative number: 75

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 115.124 Scope 2: 603.247 Scope 3: 1818.167 Scope 1+2: 718.372 Scope 1+2+3: 2379.671	Scope 1: 90 Scope 2: 90 Scope 3: 80 Scope 1+2: 90 Scope 1+2+3: 80	Scope 1: 93 Scope 2: 93 Scope 3: 83 Scope 1+2: 93 Scope 1+2+3: 83
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 8.921 Scope 1+2+3: 25.318	Scope 1+2: 50 Scope 1+2+3: 80	Scope 1+2: 51 Scope 1+2+3: 83
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 380.479	Scope 1+2+3: 65	Scope 1+2+3: 67
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	0.0	90	93
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 62.4	Energy Consumption: 75 Energy Production: 0	Energy Consumption: 78
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	2.16	90	93
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	93	96
Voting and Engagement policy with systematic voting criteria linked	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies,	33.83	78	81

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

with board gender diversity		expressed as a percentage of all board members (%)			
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	24	25

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 3 Relative number: 3	Absolute number: 75 Relative number: 75

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
PROLOGIS INC XNYS USD	Real estate activities	4.02%	US
WELLTOWER INC XNYS USD	Real estate activities	3.9%	US
EQUINIX INC XNGS USD	Real estate activities	2.94%	US
DIGITAL REALTY TRUST INC XNYS USD	Real estate activities	2.49%	US
GOODMAN GROUP XASX AUD	Real estate activities	2.44%	AU
MITSUI FUDOSAN CO LTD XTKS JPY	Real estate activities	2.12%	JP
EXTRA SPACE STORAGE INC XNYS USD	Real estate activities	2.07%	US
SIMON PROPERTY GROUP INC XNYS USD	Real estate activities	2.04%	US
AVALONBAY COMMUNITIES INC XNYS USD	Real estate activities	1.82%	US
CAPITALAND INTEGRATED COMMER XSES SGD	Real estate activities	1.7%	SG
REALTY INCOME CORP XNYS USD	Real estate activities	1.66%	US
LINK REIT XHKG HKD	Real estate activities	1.46%	HK
SUN COMMUNITIES INC XNYS USD	Real estate activities	1.41%	US

FMUFP 4.125% - 23/05/2033 Call	Real estate activities	1.27%	FR

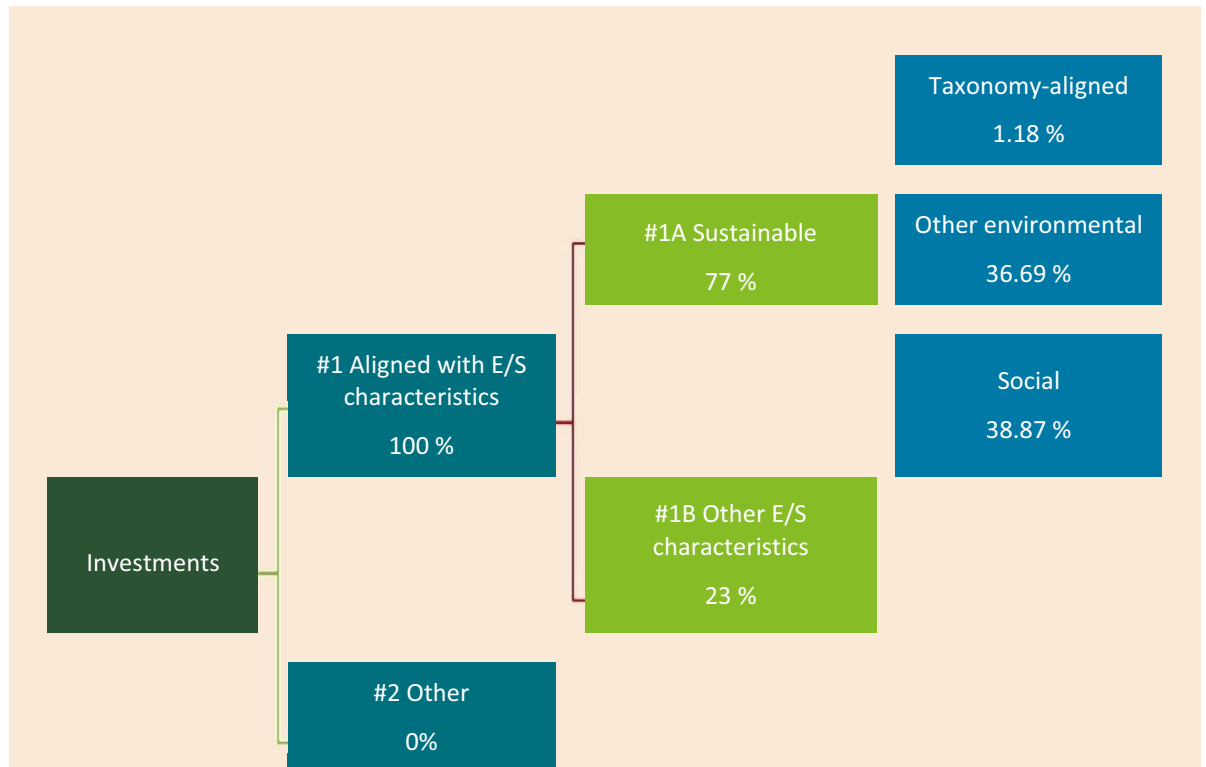

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Real estate activities	90.72%
Public administration and defence, compulsory social security	2.9%
Financial service activities, except insurance and pension funding	2.86%
Other	1.24%
Activities auxiliary to financial services and insurance activities	0.97%

Telecommunications	0.71%
Civil engineering	0.34%
Programming and broadcasting activities	0.27%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

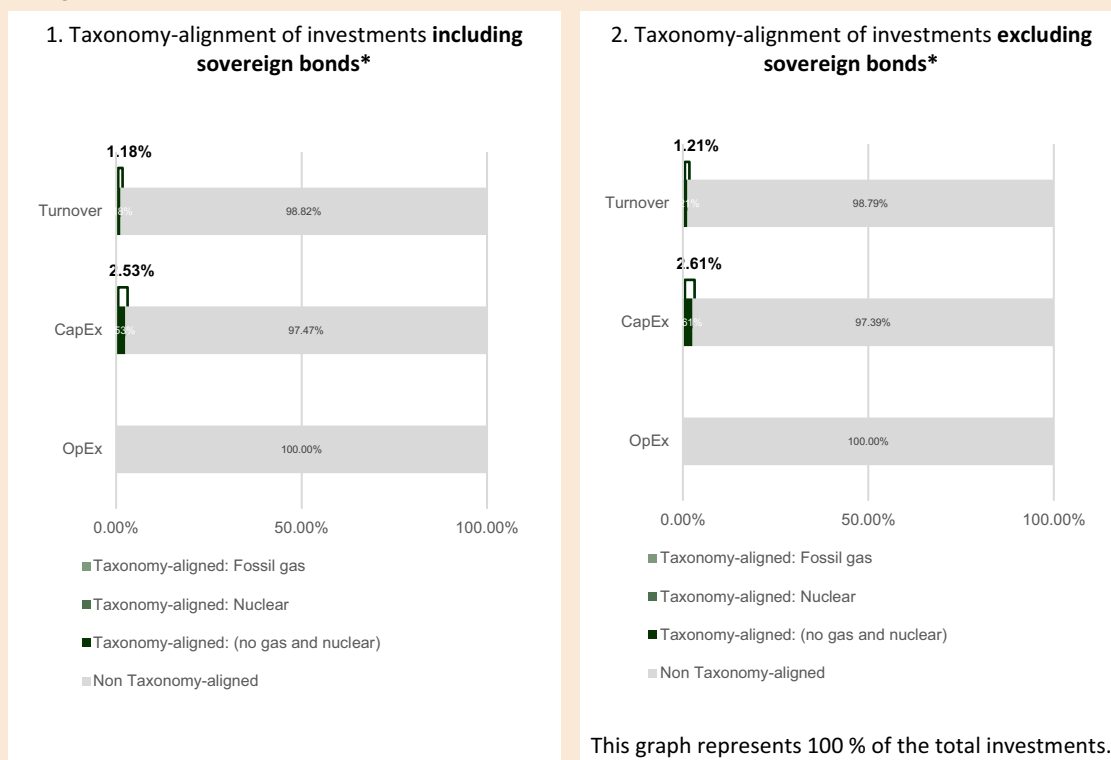

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	1.18%	1.47%	0.00%	0.00%
CapEx-based	2.53%	2.58%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 36.69% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 38.87% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity related instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and/or for diversification and/or hedging purposes.

Environmental or social safeguards are applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global High Yield Bonds (the “Financial Product”) **Legal Entity Identifier:** 213800ZD79HTOMZACH58

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> YES	<input type="radio"/> <input checked="" type="radio"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 28.55 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	5.81 / 10	5.71 / 10	97.55 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	5.65 / 10	5.55 / 10	98.9 %
ESG Score	2023	5.42 / 10	5.54 / 10	99.34 %
ESG Score	2022	5.23 / 10	5.12 / 10	99.72 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	26	26

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 46662.43	Scope 1: 57	Scope 1: 60
Ecosystem protection & Deforestation policy			Scope 2: 11475.545		
			Scope 3: 416802.813	Scope 3: 52	Scope 3: 54
			Scope 1+2: 58137.977	Scope 1+2: 57	Scope 1+2: 60
			Scope 1+2+3: 471664.0	Scope 1+2+3: 52	Scope 1+2+3: 54
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 157.615	Scope 1+2: 30	Scope 1+2: 31
Ecosystem protection & Deforestation policy			Scope 1+2+3: 471.065		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1262.999	Scope 1+2+3: 28	Scope 1+2+3: 30
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	6.64	57	60
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 72.72 Energy Production: 79.33	Energy Consumption: 32 Energy Production: 1	Energy Consumption: 34 Energy Production: 1
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	21.41	49	51

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	80	84
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	31.53	34	35
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	26	26

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
Stand Alone 14988 USD SET SSX	Other	1.89%	N/A
CZR 7% - 15/02/2030 Call	Gambling and betting activities	0.9%	US
SUMMPL 8.625% - 31/10/2029 Call	Land transport and transport via pipelines	0.72%	US
ZMINFO 3.875% - 01/02/2029 Call	Publishing activities	0.71%	US
TIBX 9% - 30/09/2029 Call	Publishing activities	0.68%	US
GRA 5.625% - 15/08/2029 Call	Manufacture of chemicals and chemical products	0.62%	US
NOVHOL 8.75% - 15/04/2030 Call	Manufacture of paper and paper products	0.62%	US
NLSN 9.29% - 15/04/2029 Call	Advertising and market research	0.6%	US
CE 5% - 15/04/2031 Call	Manufacture of chemicals and chemical products	0.57%	US
VRTV 10.5% - 30/11/2030 Call	Printing and reproduction of recorded media	0.56%	US
NGL 8.375% - 15/02/2032 Call	Land transport and transport via pipelines	0.56%	US
USACUT 9.75% - 15/05/2029 Call	Human health activities	0.56%	US
UVN 8.5% - 31/07/2031 Call	Motion picture, video and television programme production, sound recording and music publishing activity	0.55%	US
BWY 9.25% - 15/04/2027 Call	Manufacture of paper and paper products	0.55%	US
RISBAK 8.625% - 01/11/2031 Call	Manufacture of food products	0.54%	US

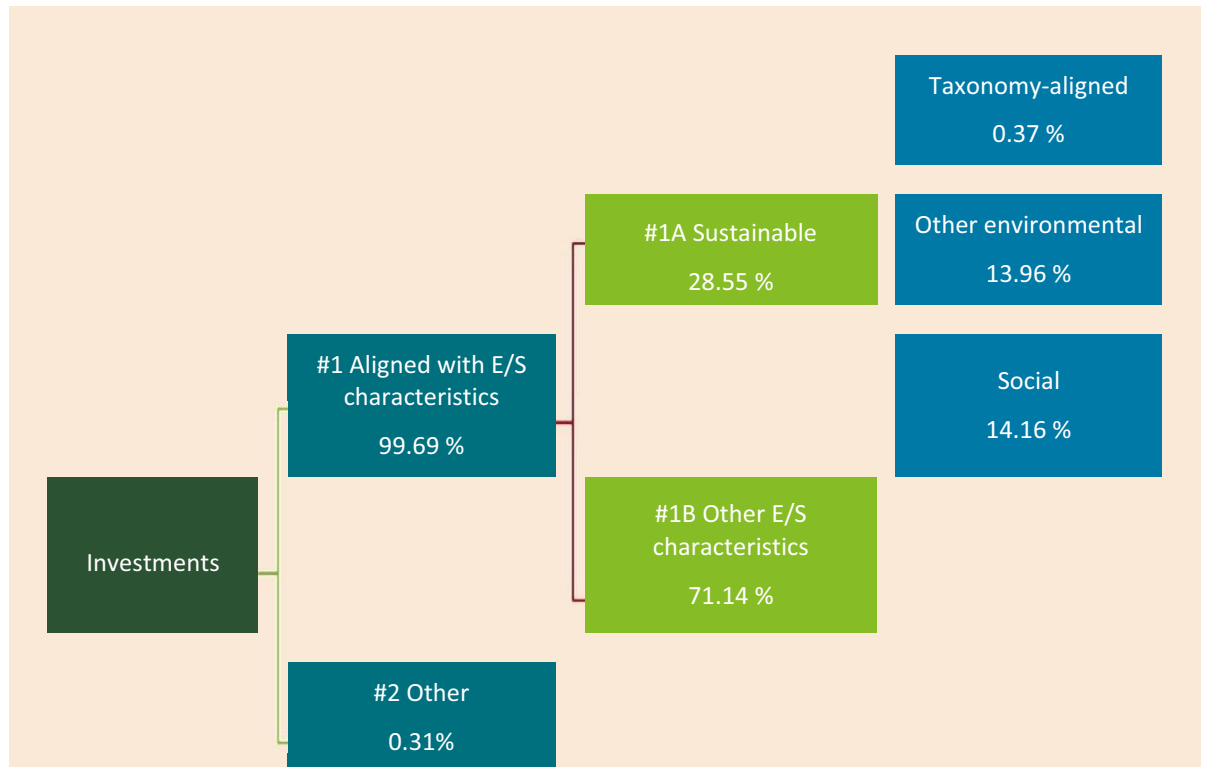

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Publishing activities	6.99%
Other	6.23%
Telecommunications	5.8%
Manufacture of chemicals and chemical products	5.77%
Land transport and transport via pipelines	5.67%

Financial service activities, except insurance and pension funding	5.01%
Gambling and betting activities	3.33%
Human health activities	3.32%
Manufacture of motor vehicles, trailers and semi-trailers	3.08%
Retail trade, except of motor vehicles and motorcycles	2.54%
Manufacture of paper and paper products	2.51%
Manufacture of machinery and equipment n.e.c.	2.5%
Real estate activities	2.5%
Wholesale trade, except of motor vehicles and motorcycles	2.47%
Security and investigation activities	2.39%
Activities auxiliary to financial services and insurance activities	2.16%
Manufacture of fabricated metal products, except machinery and equipment	2.15%
Water transport	1.98%
Electricity, gas, steam and air conditioning supply	1.82%
Manufacture of food products	1.78%
Manufacture of computer, electronic and optical products	1.67%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.61%
Office administrative, office support and other business support activities	1.48%
Advertising and market research	1.44%
Manufacture of electrical equipment	1.43%
Information service activities	1.37%
Extraction of crude petroleum and natural gas	1.31%
Computer programming, consultancy and related activities	1.23%
Manufacture of other non-metallic mineral products	1.2%
Programming and broadcasting activities	1.17%

Public administration and defence, compulsory social security	0%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

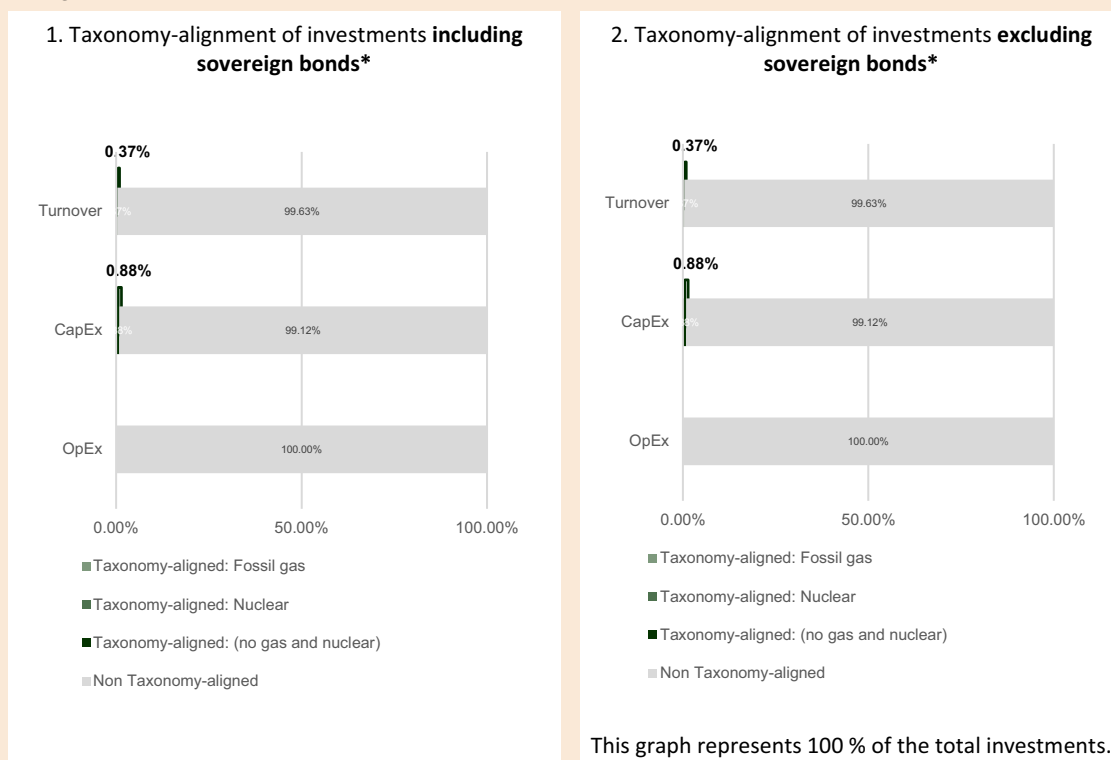

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.37%	0.35%	0.00%	0.00%
CapEx-based	0.88%	0.53%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 13.96% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 14.16% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0.31% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Income **Legal Entity Identifier:** 213800P3YKJP6NILO102
 Generation (the “Financial Product”)

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 49.13 % of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.71 / 10	6.19 / 10	97.91 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	6.79 / 10	6.18 / 10	97.62 %
ESG Score	2023	6.73 / 10	6.2 / 10	98.18 %
ESG Score	2022	6.59 / 10	6.02 / 10	98.1 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 15084.984 Scope 2: 3130.248 Scope 3: 163313.094 Scope 1+2: 18215.234 Scope 1+2+3: 179514.734	Scope 1: 74 Scope 2: 74 Scope 3: 64 Scope 1+2: 74 Scope 1+2+3: 64	Scope 1: 88 Scope 2: 88 Scope 3: 77 Scope 1+2: 88 Scope 1+2+3: 77

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 12 Relative number: 12	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 15084.984	Scope 1: 74	Scope 1: 88
Ecosystem protection & Deforestation policy			Scope 2: 3130.248		
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 18215.234	Scope 1+2: 37	Scope 1+2: 44
Ecosystem protection & Deforestation policy			Scope 3: 163313.094		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 179514.734	Scope 1+2+3: 53	Scope 1+2+3: 64
Ecosystem protection & Deforestation policy			Scope 1+2+3: 549.703		
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	10.75	74	88
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 64.11 Energy Production: 67.16	Energy Consumption: 63 Energy Production: 3	Energy Consumption: 75 Energy Production: 3
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	29.0	70	84

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	80	96
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	34.97	65	78
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	24	29

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA Aedificandi I Capitalisation EUR	Financial service activities, except insurance and pension funding	2.1%	FR
AXA WF Global Income Generating Assets M Capitalis	Financial service activities, except insurance and pension funding	1.82%	LU

The portfolio proportions of investments presented above are an average over the reference period.

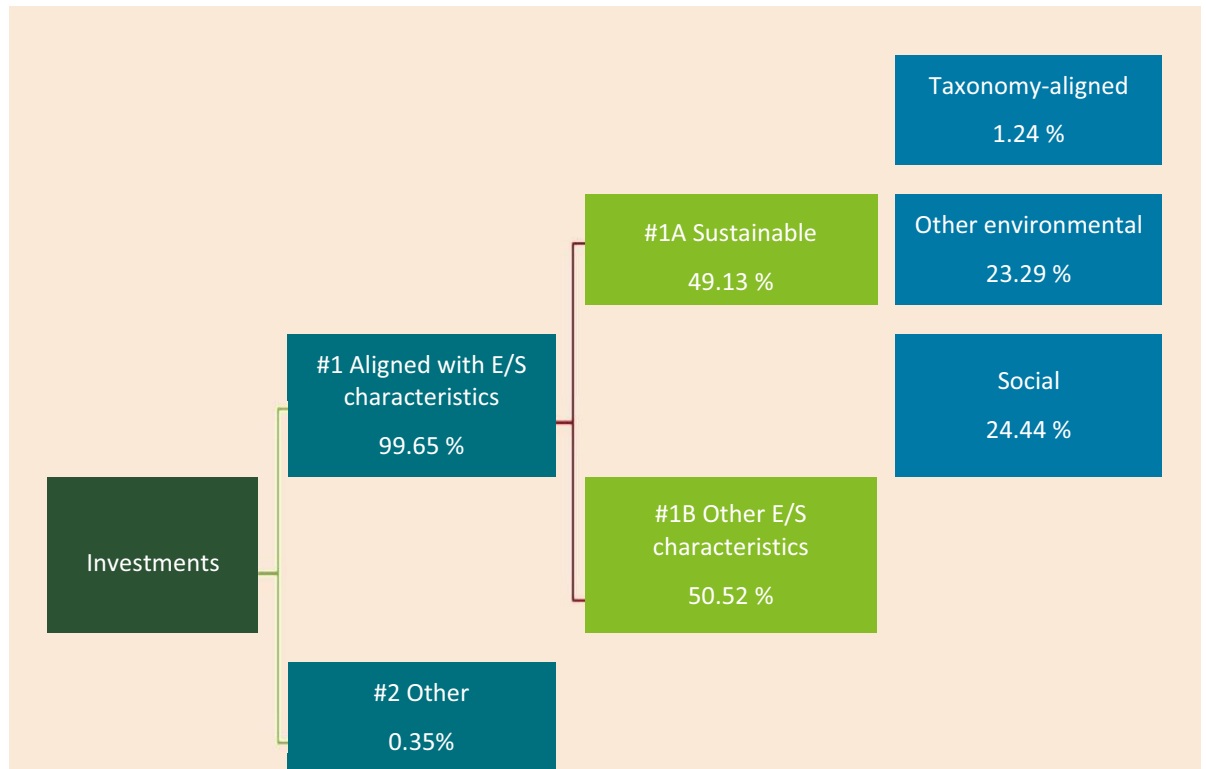

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	18.66%
Public administration and defence, compulsory social security	11.75%
Electricity, gas, steam and air conditioning supply	5.58%
Insurance, reinsurance and pension funding, except compulsory social security	5.47%
Telecommunications	5.33%

Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.08%
Real estate activities	4.51%
Other	4.37%
Manufacture of motor vehicles, trailers and semi-trailers	3.89%
Manufacture of coke and refined petroleum products	3.02%
Activities auxiliary to financial services and insurance activities	2.52%
Mining of metal ores	2.5%
Manufacture of computer, electronic and optical products	2.2%
Manufacture of food products	2.15%
Manufacture of chemicals and chemical products	2.1%
Land transport and transport via pipelines	1.84%
Extraction of crude petroleum and natural gas	1.75%
Retail trade, except of motor vehicles and motorcycles	1.74%
Computer programming, consultancy and related activities	1.36%
Manufacture of beverages	1.27%
Manufacture of paper and paper products	1.25%
Scientific research and development	0.86%
Gambling and betting activities	0.83%
Warehousing and support activities for transportation	0.68%
Postal and courier activities	0.66%
Human health activities	0.59%
Publishing activities	0.54%
Rental and leasing activities	0.54%
Wholesale trade, except of motor vehicles and motorcycles	0.53%
Manufacture of machinery and equipment n.e.c.	0.52%
Manufacture of fabricated metal products, except machinery and equipment	0.5%
Manufacture of rubber and plastic products	0.5%
Waste collection, treatment and disposal activities, materials recovery	0.46%
Information service activities	0.4%
Legal and accounting activities	0.38%
Office administrative, office support and other business support activities	0.36%
Water collection, treatment and supply	0.31%
Manufacture of electrical equipment	0.31%
Water transport	0.3%
Other manufacturing	0.29%
Air transport	0.27%
Food and beverage service activities	0.24%
Manufacture of other non-metallic mineral products	0.17%
Motion picture, video and television programme production, sound recording and music publishing activity	0.14%
Sports activities and amusement and recreation activities	0.14%
Construction of buildings	0.14%
Repair and installation of machinery and equipment	0.13%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.13%
Services to buildings and landscape activities	0.12%
Activities of head offices, management consultancy activities	0.12%
Manufacture of other transport equipment	0.09%
Civil engineering	0.08%

Education	0.08%
Manufacture of wearing apparel	0.06%
Security and investigation activities	0.06%
Employment activities	0.04%
Programming and broadcasting activities	0.03%
Advertising and market research	0.03%
Crop and animal production, hunting and related service activities	0.02%
Other personal service activities	0.01%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	1.24%	2.43%	0.00%	0.00%
CapEx-based	2.62%	2.25%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 23.29% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 24.44% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0.35% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Inflation Bonds Redex (the “Financial Product”)

Legal Entity Identifier: 2138005OTTGJJ1R33Q91

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input type="checkbox"/> YES	<input checked="" type="checkbox"/> <input type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 1.81 % of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6.24 / 10		100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	6.21 / 10		100 %
ESG Score	2023	6 / 10		100 %
ESG Score	2022	5.95 / 10		100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	N/A	Scope 1: 0 Scope 2: 0 Scope 3: 0 Scope 1+2: 0 Scope 1+2+3: 0	N/A
	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/€M)	N/A	Scope 1+2: 0 Scope 1+2+3: 0	N/A
	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO ₂ e/€M)	N/A	Scope 1+2+3: 0	N/A
Climate Risk policy	PAI 4: Exposure to Companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	N/A	0	N/A
SDG no significantly negative score	PAI 5 : Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	N/A	Energy Consumption: 0 Energy Production: 0	N/A
Climate risk policy (considering an expected correlation between GHG emissions and energy consumption) ¹	PAI 6: Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector (GWh/€M)	N/A	Sector NACE A: 0 Sector NACE B: 0 Sector NACE C: 0 Sector NACE D: 0 Sector NACE E: 0 Sector NACE F: 0 Sector NACE G: 0 Sector NACE H: 0 Sector NACE L: 0	N/A
Ecosystem Protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	N/A	0	N/A
SDG no significantly negative score	PAI 8: Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	N/A	0	N/A
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	N/A	0	N/A

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	N/A	0	N/A
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	N/A	0	N/A
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	N/A	0	N/A
SDG no significantly negative score	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	N/A	0	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	N/A	0	N/A

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 99 Relative number: 99	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	N/A	Scope 1: 0	N/A
Ecosystem protection & Deforestation policy				Scope 2: 0	
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	N/A	Scope 3: 0	N/A
Ecosystem protection & Deforestation policy				Scope 1+2: 0	
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	N/A	Scope 1+2+3: 0	N/A
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	N/A	0	N/A
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	N/A	0	N/A
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	N/A	0	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	N/A	0	N/A

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
• AXA IM ESG Standards policy, through the	PAI 16: Sovereign Investee countries	Number of investee countries subject to social violations	Absolute number: 0 Relative number: 0	Absolute number: 99 Relative number: 99	Absolute number: 100

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

exclusion of investee countries with severe social violations • Compliance black-list based on international and EU sanctions	subject to social violations	(absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law			Relative number: 100
--	------------------------------	--	--	--	----------------------

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
TII 1.75% - 15/01/2034 CPI	Public administration and defence, compulsory social security	14.06%	US

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	98.45%
Other	1.55%
Manufacture of chemicals and chemical products	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

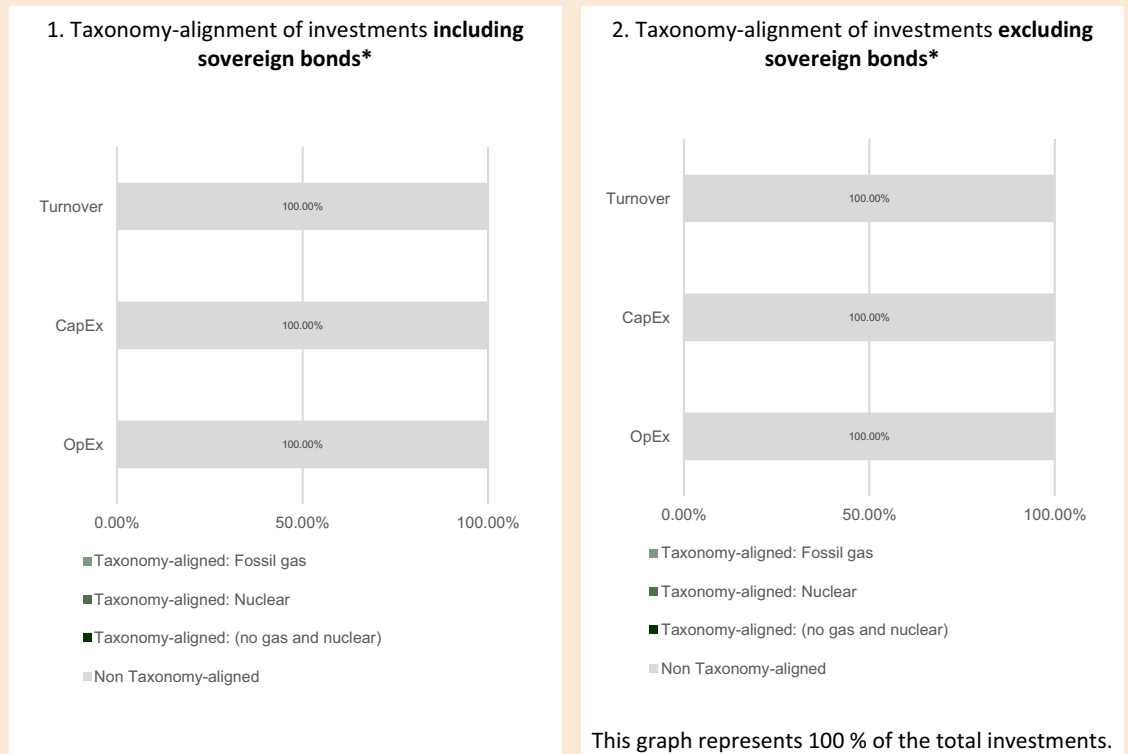

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.00%	0.00%	0.00%	0.00%
CapEx-based	0.00%	0.00%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 1.81% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

Not applicable.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Inflation Bonds (the “Financial Product”)

Legal Entity Identifier: 213800B3CJEB7BTR4711

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input type="checkbox"/> YES	<input checked="" type="checkbox"/> <input type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 1.28 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Investment Universe	Coverage
ESG Score	6.14 / 10	6.13 / 10	99.99 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Investment Universe	Coverage
ESG Score	2024	6.1 / 10	6.09 / 10	99.99 %
ESG Score	2023	5.97 / 10	5.94 / 10	99.98 %
ESG Score	2022	6 / 10	5.92 / 10	99.81 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 57.535 Scope 2: 13.924 Scope 3: 763.682 Scope 1+2: 71.459 Scope 1+2+3: 835.114	Scope 1: 0 Scope 2: 0 Scope 3: 0 Scope 1+2: 0 Scope 1+2+3: 0	Scope 1: 14 Scope 2: 14 Scope 3: 14 Scope 1+2: 14 Scope 1+2+3: 14

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 57.535 Scope 2: 13.924 Scope 3: 763.682 Scope 1+2: 71.459 Scope 1+2+3: 835.114	Scope 1: 0 Scope 2: 0 Scope 3: 0 Scope 1+2: 0 Scope 1+2+3: 0	Scope 1: 14 Scope 2: 14 Scope 3: 14 Scope 1+2: 14 Scope 1+2+3: 14
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/€M)	Scope 1+2: 3.948 Scope 1+2+3: 0.899	Scope 1+2: 0 Scope 1+2+3: 0	Scope 1+2: 2 Scope 1+2+3: 14

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
AXA WF Global Inflation Short Duration Bonds M (H)	Financial service activities, except insurance and pension funding	3.61%	LU
TII 2.125% - 15/01/2035 CPI	Public administration and defence, compulsory social security	2.57%	US
TII 3.875% - 15/04/2029 CPI	Public administration and defence, compulsory social security	2.44%	US
TII 1.25% - 15/04/2028 CPI	Public administration and defence, compulsory social security	2%	US
TII 1.875% - 15/07/2034 CPI	Public administration and defence, compulsory social security	1.71%	US
BTPS 1.8% - 15/05/2036 CPI	Public administration and defence, compulsory social security	1.64%	IT
TII 0.125% - 15/01/2032 CPI	Public administration and defence, compulsory social security	1.62%	US
TII 1.625% - 15/04/2030 CPI	Public administration and defence, compulsory social security	1.6%	US
TII 1.75% - 15/01/2034 CPI	Public administration and defence, compulsory social security	1.57%	US
TII 1.125% - 15/01/2033 CPI	Public administration and defence, compulsory social security	1.57%	US
TII 1.625% - 15/10/2029 CPI	Public administration and defence, compulsory social security	1.56%	US

TII 0.125% - 15/07/2031 CPI	Public administration and defence, compulsory social security	1.51%	US
TII 0.125% - 15/01/2031 CPI	Public administration and defence, compulsory social security	1.5%	US
TII 0.125% - 15/07/2030 CPI	Public administration and defence, compulsory social security	1.5%	US

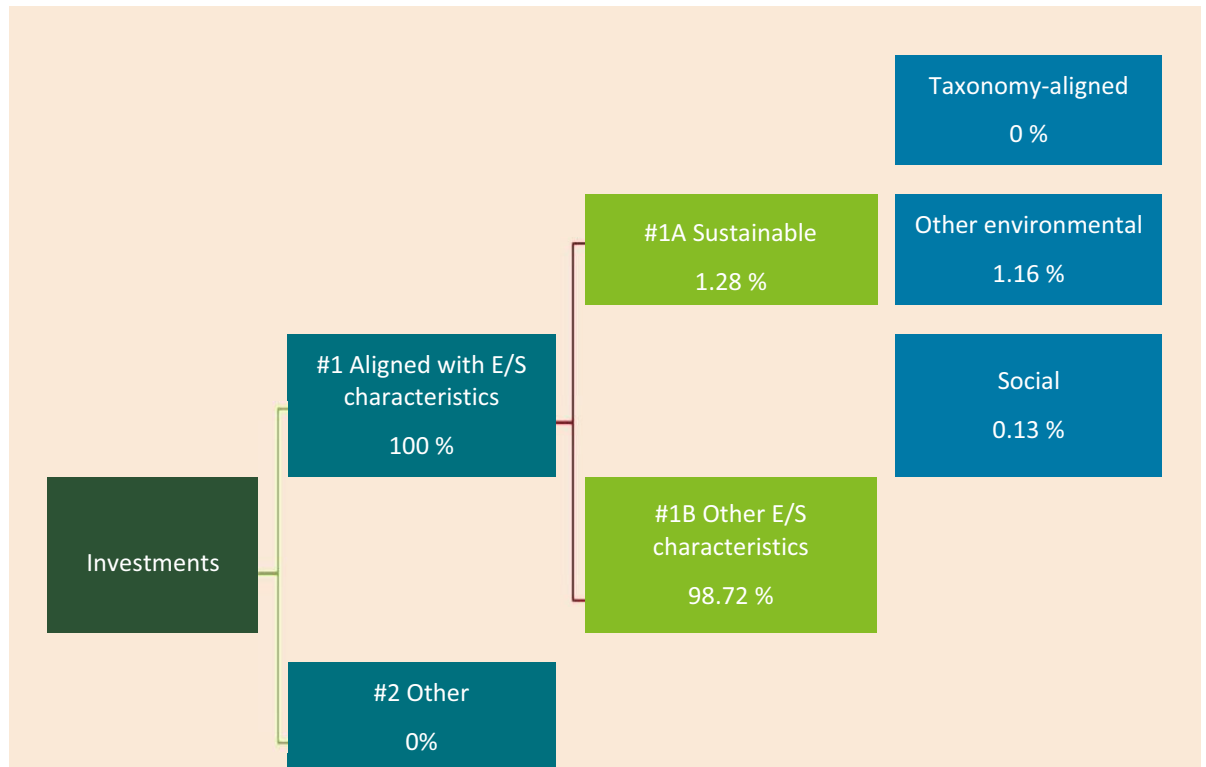

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	93.68%
Financial service activities, except insurance and pension funding	3.9%
Other	1.73%
Land transport and transport via pipelines	0.69%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

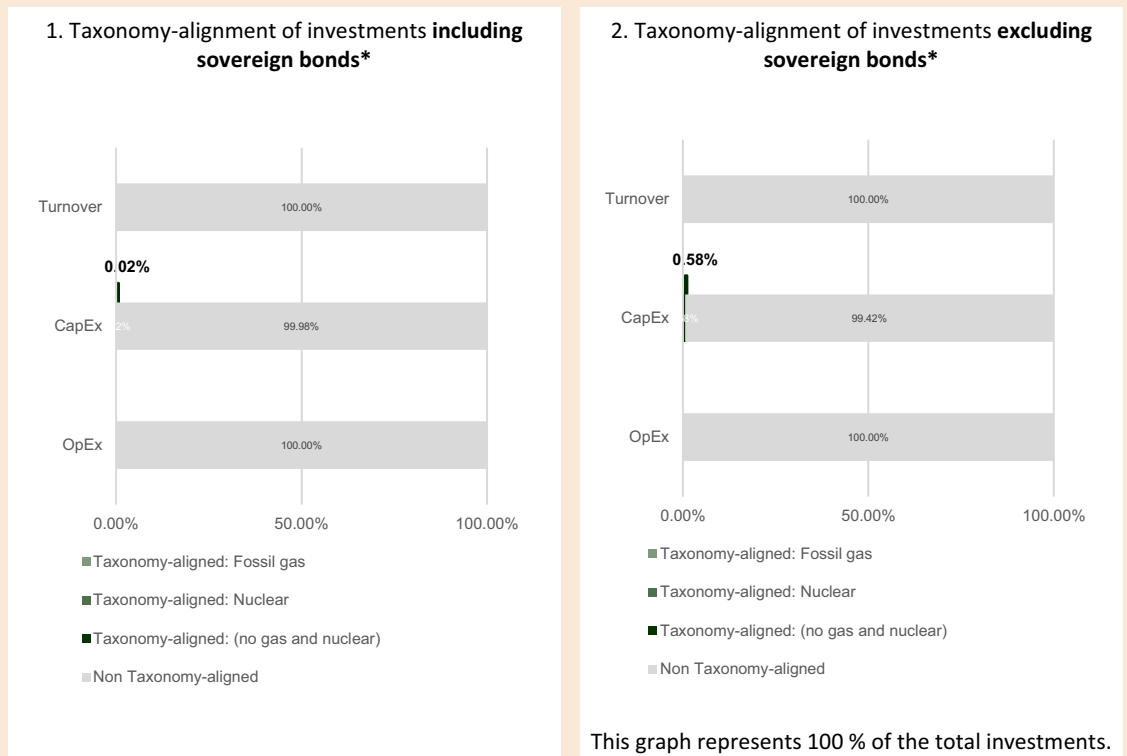

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.00%	0.01%	0.00%	0.00%
CapEx-based	0.02%	0.01%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 1.16% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 0.13% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product Name: AXA World Funds Global Inflation Short Duration Bonds (the “Financial Product”)

Legal Entity Identifier: 2138002AGTWONS399W19

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="radio"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 0 % of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6 / 10	6.02 / 10	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	6.01 / 10	5.99 / 10	100 %
ESG Score	2023	5.87 / 10	5.87 / 10	100 %
ESG Score	2022	5.88 / 10	5.88 / 10	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Financial product did not make any sustainable investments during the reference period.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Financial product did not make any sustainable investments during the reference period.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial product did not make any sustainable investments during the reference period.

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial product did not make any sustainable investments during the reference period.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	N/A	Scope 1: 0	N/A
Ecosystem protection & Deforestation policy				Scope 2: 0	
Climate Risk policy				Scope 3: 0	
Ecosystem protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	N/A	Scope 1+2: 0	N/A
Climate Risk policy				Scope 1+2+3: 0	
Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	N/A	Scope 1+2+3: 0	N/A
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	N/A	0	N/A
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those	N/A	0	N/A

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		investee companies negatively affect those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	N/A	0	N/A
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	N/A	0	N/A

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 99 Relative number: 99	Absolute number: 100 Relative number: 100

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
TII 2.125% - 15/04/2029 CPI	Public administration and defence, compulsory social security	6.58%	US
TII 1.25% - 15/04/2028 CPI	Public administration and defence, compulsory social security	5.56%	US
TII 0.375% - 15/01/2027 CPI	Public administration and defence, compulsory social security	5.43%	US
TII 0.875% - 15/01/2029 CPI	Public administration and defence, compulsory social security	4.87%	US
TII 1.625% - 15/10/2029 CPI	Public administration and defence, compulsory social security	4.21%	US
TII 0.5% - 15/01/2028 CPI	Public administration and defence, compulsory social security	4.04%	US
TII 0.125% - 15/01/2030 CPI	Public administration and defence, compulsory social security	3.68%	US
TII 1.625% - 15/04/2030 CPI	Public administration and defence, compulsory social security	3.56%	US
TII 0.25% - 15/07/2029 CPI	Public administration and defence, compulsory social security	3.54%	US
TII 2.375% - 15/10/2028 CPI	Public administration and defence, compulsory social security	3.44%	US
TII 0.75% - 15/07/2028 CPI	Public administration and defence, compulsory social security	3.24%	US
UKTI 1.25% - 22/11/2027 CPI	Public administration and defence, compulsory social security	2.97%	GB
FRTR 1.85% - 25/07/2027 CPI	Public administration and defence, compulsory social security	2.95%	FR
TII 0.125% - 15/10/2026 CPI	Public administration and defence, compulsory social security	2.93%	US
UKTI 0.125% - 22/03/2029 CPI	Public administration and defence, compulsory social security	2.52%	GB

The portfolio proportions of investments presented above are an average over the reference period.

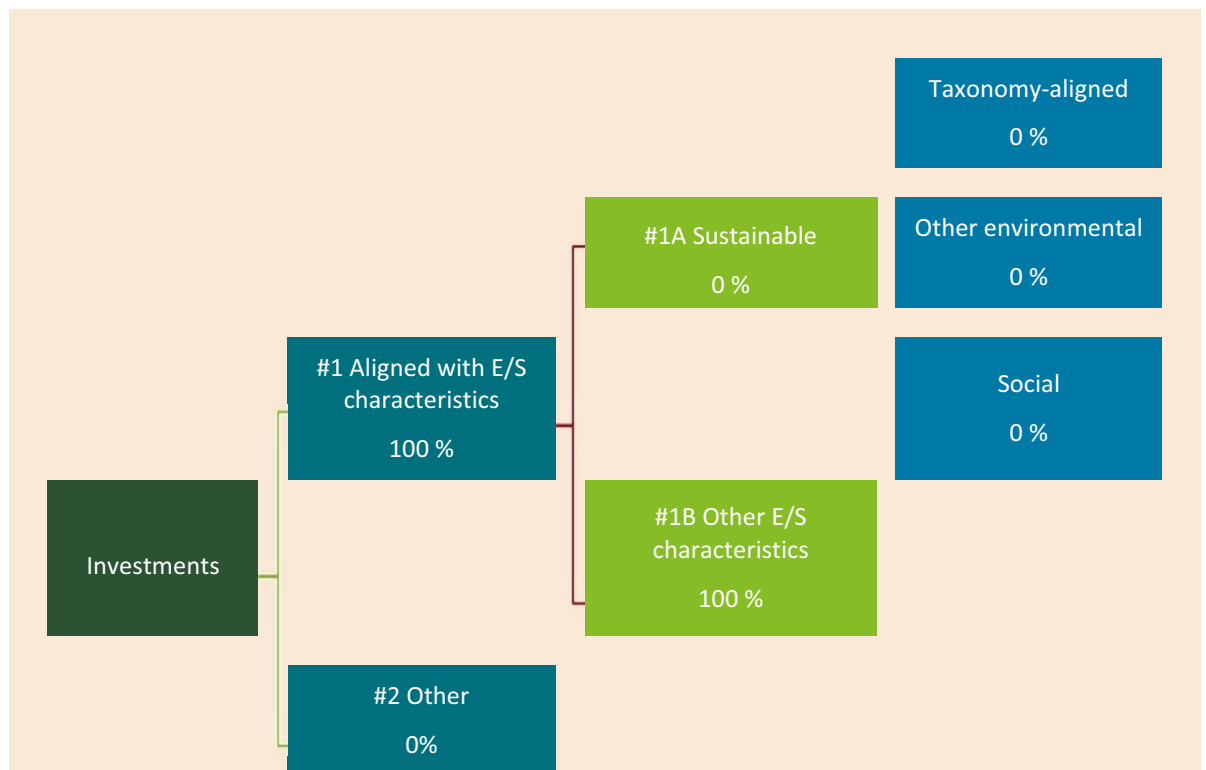

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	99.44%
Other	0.56%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?¹

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the "do not significantly harm" criteria of the EU Taxonomy.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.00%	0.00%	0.00%	0.00%
CapEx-based	0.00%	0.00%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

Not applicable.

- **What was the share of socially sustainable investments?**

Not applicable.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

- **How did this financial product perform compared to the reference benchmark?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Optimal **Legal Entity Identifier:** 213800VRWFHRN3LIZV13
Income (the "Financial Product")

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 55.39 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.74 / 10	6.37 / 10	99.6 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	7.03 / 10	6.36 / 10	99.43 %
ESG Score	2023	7.19 / 10	6.36 / 10	99.18 %
ESG Score	2022	6.99 / 10	6.22 / 10	99.65 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 9306.934 Scope 2: 3701.912 Scope 3: 312708.906 Scope 1+2: 13011.336 Scope 1+2+3: 324879.906	Scope 1: 84 Scope 2: 84 Scope 3: 72 Scope 1+2: 84 Scope 1+2+3: 72	Scope 1: 98 Scope 2: 97 Scope 3: 84 Scope 1+2: 98 Scope 1+2+3: 84

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	36.04	82	95
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	26	31

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 1 Relative number: 1	Absolute number: 97 Relative number: 97

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 9306.934	Scope 1: 84	Scope 1: 98
Ecosystem protection & Deforestation policy			Scope 2: 3701.912		
			Scope 3: 312708.906	Scope 3: 72	Scope 3: 84
			Scope 1+2: 13011.336	Scope 1+2: 84	Scope 1+2: 98
			Scope 1+2+3: 324879.906	Scope 1+2+3: 72	Scope 1+2+3: 84
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 62.628	Scope 1+2: 41	Scope 1+2: 49
Ecosystem protection & Deforestation policy			Scope 1+2+3: 517.858		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1707.236	Scope 1+2+3: 70	Scope 1+2+3: 81
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	4.85	84	98
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 49.8 Energy Production: 65.42	Energy Consumption: 80 Energy Production: 2	Energy Consumption: 94 Energy Production: 2
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	34.76	80	94

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	85	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	36.04	82	95
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	26	31

For Sovereign and supranationals:

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	4.05%	US
MICROSOFT CORP XNGS USD	Publishing activities	3.77%	US
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	3.55%	US
AMUNDI PHYSICAL GOLD ETC	Financial service activities, except insurance and pension funding	2.91%	IE
ALPHABET INC-CL A XNGS USD	Information service activities	2.78%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	2.44%	US
ISHARES PHYSICAL GOLD ETC	Financial service activities, except insurance and pension funding	2.24%	IE
META PLATFORMS INC-CLASS A XNGS USD	Information service activities	2.15%	US
ISHARES PHYSICAL SILVER ETC	Financial service activities, except insurance and pension funding	1.48%	IE
BROADCOM INC XNGS USD	Manufacture of computer, electronic and optical products	1.37%	US
TAIWAN SEMICONDUCTOR-SP ADR XNYS USD	Manufacture of machinery and equipment n.e.c.	1.35%	TW
TJX COMPANIES INC XNYS USD	Retail trade, except of motor vehicles and motorcycles	1.2%	US
AXA WF Global Income Generating Assets M Capitalis	Financial service activities, except insurance and pension funding	1.15%	LU
Portfolio 49272 USD IMN GSI	Other	1.04%	N/A
ROBINHOOD MARKETS INC - A XNGS USD	Activities auxiliary to financial services and insurance activities	1%	US

The portfolio proportions of investments presented above are an average over the reference period.

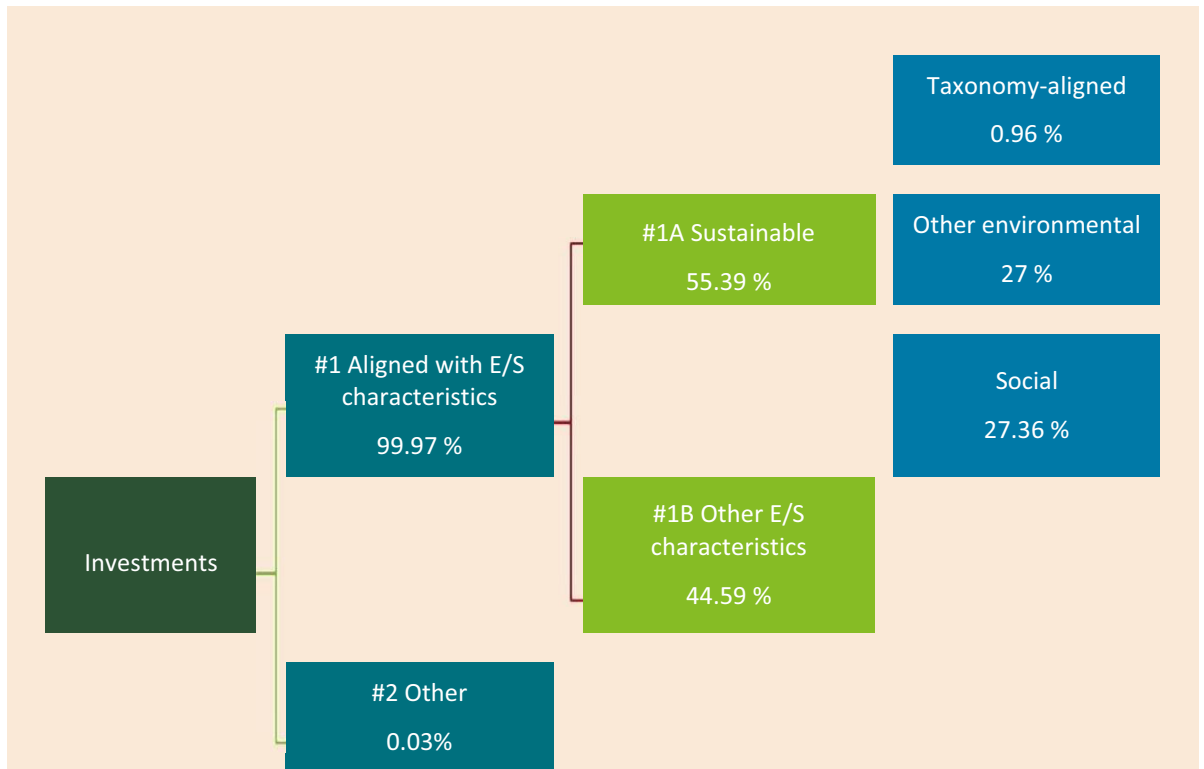

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	19.44%
Manufacture of computer, electronic and optical products	12.45%
Publishing activities	8.05%
Information service activities	7.06%
Retail trade, except of motor vehicles and motorcycles	6.86%

Other	6.73%
Activities auxiliary to financial services and insurance activities	5.2%
Manufacture of machinery and equipment n.e.c.	3.63%
Manufacture of electrical equipment	2.57%
Electricity, gas, steam and air conditioning supply	2.31%
Manufacture of other transport equipment	2.3%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.2%
Insurance, reinsurance and pension funding, except compulsory social security	2.16%
Real estate activities	1.99%
Other manufacturing	1.67%
Manufacture of chemicals and chemical products	1.62%
Telecommunications	1.22%
Manufacture of motor vehicles, trailers and semi-trailers	1.08%
Manufacture of fabricated metal products, except machinery and equipment	1.06%
Motion picture, video and television programme production, sound recording and music publishing activity	0.84%
Manufacture of coke and refined petroleum products	0.75%
Manufacture of beverages	0.64%
Mining of metal ores	0.59%
Water transport	0.57%
Manufacture of paper and paper products	0.55%
Warehousing and support activities for transportation	0.5%
Sports activities and amusement and recreation activities	0.44%
Manufacture of other non-metallic mineral products	0.36%
Computer programming, consultancy and related activities	0.35%
Extraction of crude petroleum and natural gas	0.34%
Civil engineering	0.34%
Mining support service activities	0.31%
Gambling and betting activities	0.3%
Public administration and defence, compulsory social security	0.3%
Water collection, treatment and supply	0.29%
Legal and accounting activities	0.25%
Scientific research and development	0.23%
Manufacture of food products	0.22%
Manufacture of leather and related products	0.21%
Waste collection, treatment and disposal activities, materials recovery	0.2%
Human health activities	0.19%
Land transport and transport via pipelines	0.17%
Accommodation	0.15%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.14%
Rental and leasing activities	0.12%
Manufacture of wearing apparel	0.11%
Advertising and market research	0.1%
Air transport	0.09%
Construction of buildings	0.09%
Travel agency, tour operator reservation service and related activities	0.08%
Postal and courier activities	0.08%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	0.08%

Repair and installation of machinery and equipment	0.06%
Manufacture of basic metals	0.06%
Wholesale trade, except of motor vehicles and motorcycles	0.05%
Architectural and engineering activities, technical testing and analysis	0.05%
Office administrative, office support and other business support activities	0.05%
Crop and animal production, hunting and related service activities	0.05%
Food and beverage service activities	0.05%
Manufacture of rubber and plastic products	0.02%
Services to buildings and landscape activities	0.02%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

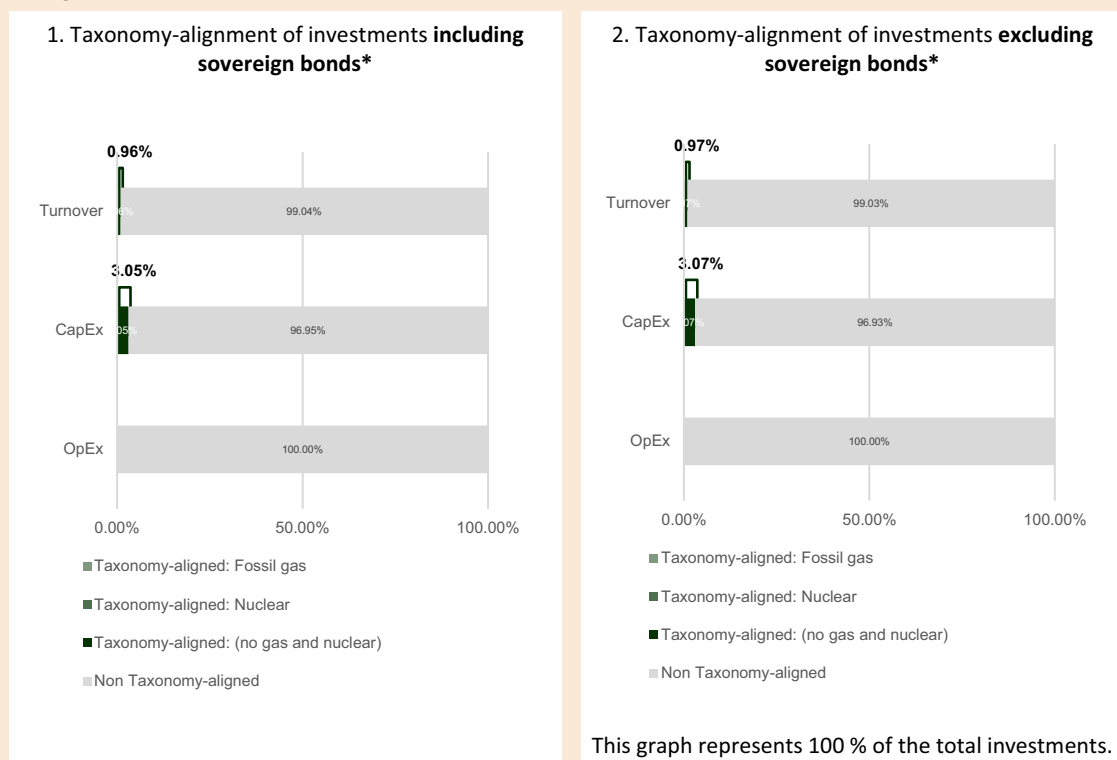

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.96%	1.17%	0.00%	0.00%
CapEx-based	3.05%	1.80%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 27% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 27.36% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0.03% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Real Estate (the "Financial Product") **Legal Entity Identifier:** 213800RDYM8R86GJH846

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 79.55 % of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	6.6 / 10	6.21 / 10	99.09 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	6.42 / 10	5.97 / 10	99.24 %
ESG Score	2023	6.53 / 10	5.87 / 10	98.82 %
ESG Score	2022	6.35 / 10	5.65 / 10	98.41 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 427.23 Scope 2: 2631.432 Scope 3: 8315.381 Scope 1+2: 3058.662 Scope 1+2+3: 10820.533	Scope 1: 96 Scope 2: 96 Scope 3: 86 Scope 1+2: 96 Scope 1+2+3: 86	Scope 1: 96 Scope 2: 96 Scope 3: 87 Scope 1+2: 96 Scope 1+2+3: 87

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	25	25

For Sovereign and supnationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 75 Relative number: 75

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 427.23 Scope 2: 2631.432 Scope 3: 8315.381 Scope 1+2: 3058.662 Scope 1+2+3: 10820.533	Scope 1: 96 Scope 2: 96 Scope 3: 86 Scope 1+2: 96 Scope 1+2+3: 86	Scope 1: 96 Scope 2: 96 Scope 3: 87 Scope 1+2: 96 Scope 1+2+3: 87
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 6.043 Scope 1+2+3: 32.024	Scope 1+2: 48 Scope 1+2+3: 86	Scope 1+2: 48 Scope 1+2+3: 87
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 405.061	Scope 1+2+3: 86	Scope 1+2+3: 87
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	0.05	96	96
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 62.47 Energy Production: 71.45	Energy Consumption: 91 Energy Production: 0	Energy Consumption: 92 Energy Production: 0
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	2.64	96	96
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	96	97
Voting and Engagement policy with systematic voting criteria linked	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies,	32.62	96	96

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

with board gender diversity		expressed as a percentage of all board members (%)			
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	25	25

For Sovereign and supranationals:

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
WELLTOWER INC XNYS USD	Real estate activities	7.44%	US
PROLOGIS INC XNYS USD	Real estate activities	6.8%	US
EQUINIX INC XNGS USD	Real estate activities	4.78%	US
DIGITAL REALTY TRUST INC XNYS USD	Real estate activities	4.41%	US
GOODMAN GROUP XASX AUD	Real estate activities	4.38%	AU
REALTY INCOME CORP XNYS USD	Real estate activities	3.79%	US
SIMON PROPERTY GROUP INC XNYS USD	Real estate activities	3.58%	US
mitsui fudosan co ltd xtkj jpy	Real estate activities	3.31%	JP
EXTRA SPACE STORAGE INC XNYS USD	Real estate activities	3.18%	US
AVALONBAY COMMUNITIES INC XNYS USD	Real estate activities	3.15%	US
VENTAS INC XNYS USD	Real estate activities	2.44%	US
LINK REIT XHKG HKD	Real estate activities	2.31%	HK
SUN COMMUNITIES INC XNYS USD	Real estate activities	2.23%	US
MITSUBISHI ESTATE CO LTD XTKS JPY	Real estate activities	2.15%	JP
AMERICAN HOMES 4 RENT- A XNYS USD	Financial service activities, except insurance and pension funding	1.85%	US

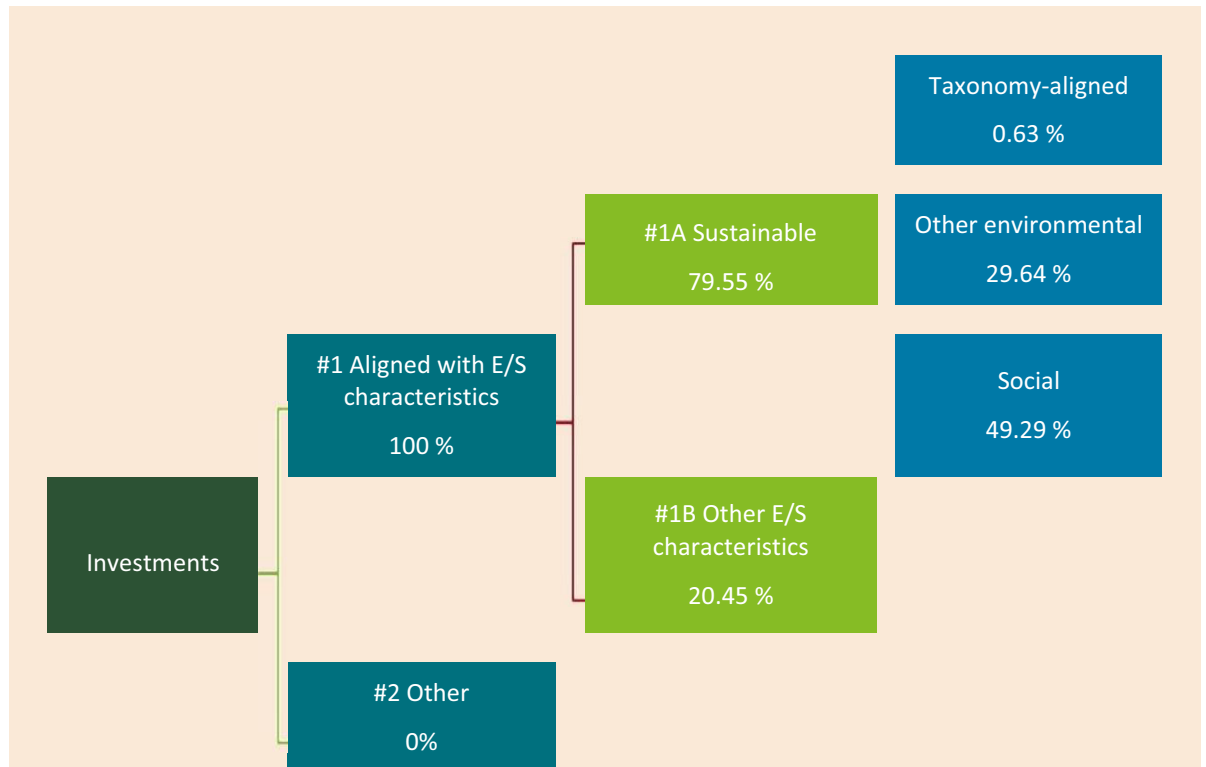

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Real estate activities	93.84%
Financial service activities, except insurance and pension funding	4.52%
Other	1.07%
Construction of buildings	0.21%
Computer programming, consultancy and related activities	0.18%

Civil engineering	0.18%
Manufacture of other non-metallic mineral products	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

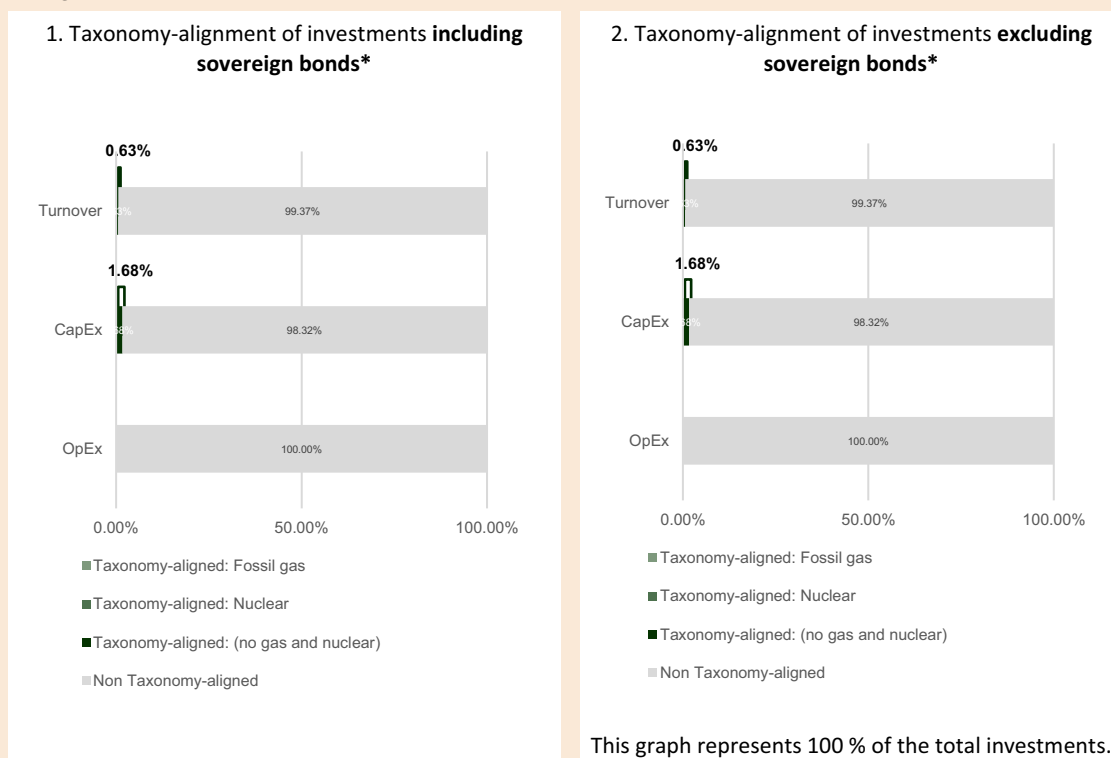

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.63%	0.91%	0.00%	0.00%
CapEx-based	1.68%	1.57%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 29.64% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 49.29% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity related instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and/or for diversification and/or hedging purposes.

Environmental or social safeguards are applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Responsible Aggregate (the “Financial Product”)

Legal Entity Identifier: 213800GCS8NNCKAOLA57

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●○ <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 37.87 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Women on Board
- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Women on Board and Carbon Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Women on Board indicator and iii) 70% for the Carbon Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Women on Board	38.49 % of women on board (for corporates only)	36.6 % of women on board (for corporates only)	90.88 %
Carbon Intensity	116.57 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	206.76 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	82.81 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Women on Board	2024	37.44 % of women on board (for corporates only)	35.96 % of women on board (for corporates only)	93.71 %
Carbon Intensity	2024	124.02 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	199.92 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	96.39 %
Women on board	2023	35.85 % of women on board	34.97 % of women on board	94.57 %
Carbon Intensity	2023	166.16 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	201.86 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.87 %
Women on board	2022	34.15 % of women on board	33.64 % of women on board	94.1 %
Carbon Intensity	2022	170.69 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	251.93 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.65 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Delegated Regulation of the Benchmark Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 9684.244 Scope 2: 2708.162 Scope 3: 118481.281 Scope 1+2: 12392.405 Scope 1+2+3: 129762.68	Scope 1: 45 Scope 2: 45 Scope 3: 40 Scope 1+2: 45 Scope 1+2+3: 40	Scope 1: 92 Scope 2: 92 Scope 3: 81 Scope 1+2: 92 Scope 1+2+3: 81

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 41 Relative number: 41	Absolute number: 94 Relative number: 94

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies
Climate Risk policy	
Ecosystem protection & Deforestation policy	PAI 4: Exposure to companies active in the fossil fuel sector
Climate Risk policy	
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity
Controversial weapons policy	PAI 14: Exposure to controversial weapons

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of AXA IM's exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark. The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund tends to invest in companies with a strong ESG profile through the implementation of an SRI strategy.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the “current value of all investments” as defined by the Regulation, or on “eligible assets with available data only” where relevant. For the purpose of this document, “eligible assets with available data only” refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. “Eligible assets without available data” refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies’ revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
T 4.5% - 15/02/2036	Public administration and defence, compulsory social security	2.77%	US

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	41.95%
Financial service activities, except insurance and pension funding	20.34%
Electricity, gas, steam and air conditioning supply	3.75%
Other	3.03%
Activities auxiliary to financial services and insurance activities	2.99%

Insurance, reinsurance and pension funding, except compulsory social security	2.61%
Activities of extraterritorial organisations and bodies	2.45%
Real estate activities	2.41%
Telecommunications	2.28%
Manufacture of food products	1.61%
Land transport and transport via pipelines	1.39%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.36%
Manufacture of motor vehicles, trailers and semi-trailers	1.25%
Manufacture of computer, electronic and optical products	1.14%
Retail trade, except of motor vehicles and motorcycles	1.09%
Manufacture of chemicals and chemical products	0.88%
Other manufacturing	0.86%
Publishing activities	0.83%
Manufacture of machinery and equipment n.e.c.	0.76%
Human health activities	0.73%
Warehousing and support activities for transportation	0.72%
Water collection, treatment and supply	0.7%
Wholesale trade, except of motor vehicles and motorcycles	0.63%
Scientific research and development	0.56%
Manufacture of paper and paper products	0.55%
Rental and leasing activities	0.5%
Information service activities	0.36%
Air transport	0.23%
Manufacture of beverages	0.23%
Manufacture of other non-metallic mineral products	0.2%
Accommodation	0.2%
Manufacture of rubber and plastic products	0.18%
Manufacture of basic metals	0.18%
Manufacture of electrical equipment	0.18%
Motion picture, video and television programme production, sound recording and music publishing activity	0.17%
Computer programming, consultancy and related activities	0.14%
Food and beverage service activities	0.12%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.11%
Construction of buildings	0.11%
Manufacture of wearing apparel	0.06%
Legal and accounting activities	0.04%
Advertising and market research	0.03%
Travel agency, tour operator reservation service and related activities	0.02%
Mining of metal ores	0.02%
Other personal service activities	0.01%
Manufacture of other transport equipment	0.01%
Social work activities without accommodation	0.01%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	1.57%	1.88%	0.00%	0.00%
CapEx-based	1.67%	1.39%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 21.17% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 14.86% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product's investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Short Duration Bonds (the “Financial Product”) **Legal Entity Identifier:** 2138009H1QMHB4JVF31

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 44.3 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.86 / 10	6.54 / 10	97.04 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	6.85 / 10	6.37 / 10	96.69 %
ESG Score	2023	6.83 / 10	6.32 / 10	96.41 %
ESG Score	2022	6.53 / 10	5.96 / 10	96.75 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 1057.406 Scope 2: 440.991 Scope 3: 42708.27 Scope 1+2: 1498.396 Scope 1+2+3: 44051.059	Scope 1: 62 Scope 2: 62 Scope 3: 53 Scope 1+2: 62 Scope 1+2+3: 53	Scope 1: 82 Scope 2: 82 Scope 3: 70 Scope 1+2: 82 Scope 1+2+3: 70

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 20 Relative number: 20	Absolute number: 97 Relative number: 97

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 1057.406	Scope 1: 62	Scope 1: 82

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
TII 1.625% - 15/10/2027 CPI	Public administration and defence, compulsory social security	5.32%	US
TII 0.125% - 15/10/2026 CPI	Public administration and defence, compulsory social security	4.74%	US
UKT 4.25% - 07/12/2027	Public administration and defence, compulsory social security	2.52%	GB
UKT 4.5% - 07/06/2028	Public administration and defence, compulsory social security	2.45%	GB
AXA WF US Short Duration High Yield Bonds M Capita	Financial service activities, except insurance and pension funding	2.27%	LU
Stand Alone 93467 EUR SET SSX	Other	1.52%	N/A

The portfolio proportions of investments presented above are an average over the reference period.

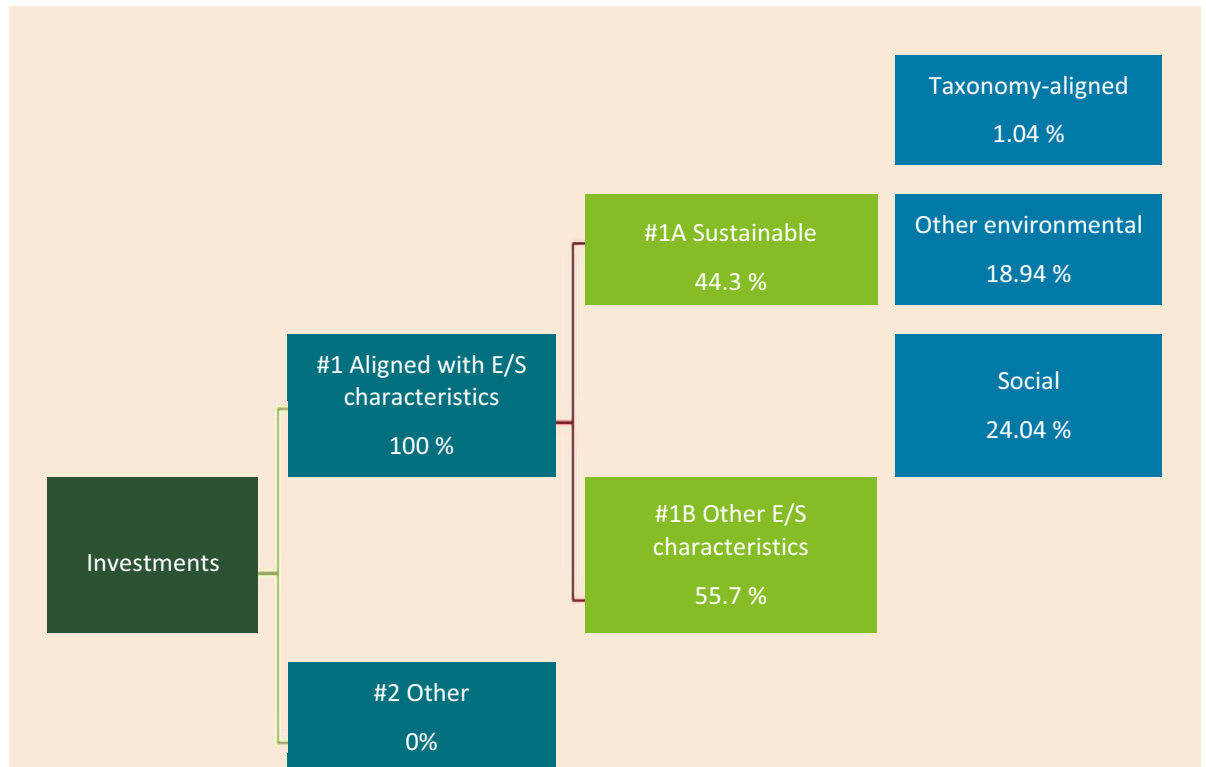

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	34.19%
Public administration and defence, compulsory social security	19.94%
Insurance, reinsurance and pension funding, except compulsory social security	5.58%
Manufacture of motor vehicles, trailers and semi-trailers	5.36%
Warehousing and support activities for transportation	3.71%

Other	3.3%
Water collection, treatment and supply	3.15%
Activities auxiliary to financial services and insurance activities	2.87%
Telecommunications	2.72%
Electricity, gas, steam and air conditioning supply	2.27%
Real estate activities	1.78%
Human health activities	1.32%
Manufacture of beverages	1.31%
Wholesale and retail trade and repair of motor vehicles and motorcycles	1.08%
Manufacture of chemicals and chemical products	1.06%
Information service activities	0.88%
Manufacture of computer, electronic and optical products	0.77%
Retail trade, except of motor vehicles and motorcycles	0.76%
Land transport and transport via pipelines	0.74%
Manufacture of food products	0.65%
Manufacture of machinery and equipment n.e.c.	0.54%
Accommodation	0.47%
Programming and broadcasting activities	0.46%
Manufacture of leather and related products	0.45%
Sports activities and amusement and recreation activities	0.41%
Food and beverage service activities	0.39%
Rental and leasing activities	0.37%
Motion picture, video and television programme production, sound recording and music publishing activity	0.37%
Manufacture of electrical equipment	0.37%
Gambling and betting activities	0.3%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.28%
Manufacture of paper and paper products	0.28%
Other manufacturing	0.28%
Waste collection, treatment and disposal activities, materials recovery	0.25%
Wholesale trade, except of motor vehicles and motorcycles	0.22%
Extraction of crude petroleum and natural gas	0.21%
Services to buildings and landscape activities	0.19%
Manufacture of rubber and plastic products	0.19%
Manufacture of fabricated metal products, except machinery and equipment	0.18%
Mining of metal ores	0.16%
Office administrative, office support and other business support activities	0.08%
Publishing activities	0.06%
Manufacture of basic metals	0.05%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	1.04%	0.85%	0.00%	0.00%
CapEx-based	1.68%	1.18%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 18.94% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 24.04% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Small Cap Equity QI (the “Financial Product”) **Legal Entity Identifier:** 213800W4SU2RSMIF6142

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 38.48 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	135.21 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	179.87 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	82.87 %
Water Intensity	5468.83 Thousands of cubic meters per million \$ of revenue (for corporates only)	10468.49 Thousands of cubic meters per million \$ of revenue (for corporates only)	99.38 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● ... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	74.34 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	233.2 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	99.35 %
Water Intensity	2024	987.94 Thousands of cubic meters per million \$ of revenue (for corporates only)	9200.9 Thousands of cubic meters per million \$ of revenue (for corporates only)	98.66 %
Carbon intensity	2023	87.46 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	237.99 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.6 %
Water Intensity	2023	686.06 Thousands of cubic meters for corporates	12291.13 Thousands of cubic meters for corporates	97.97 %
Carbon intensity	2022	225.53 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	283.26 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.39 %
Water intensity	2022	605.69 Thousands of cubic meters for corporates	15009.05 Thousands of cubic meters for corporates	98.39 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the "do not significantly harm" principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy

alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	31.84	98	98
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	26	27

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 6282.683	Scope 1: 98 Scope 2: 98 Scope 3: 89 Scope 1+2: 98 Scope 1+2+3: 89	Scope 1: 99 Scope 2: 99 Scope 3: 90 Scope 1+2: 99 Scope 1+2+3: 90
Ecosystem protection & Deforestation policy			Scope 2: 2307.94 Scope 3: 102377.305 Scope 1+2: 8590.623 Scope 1+2+3: 110667.234		
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 71.182	Scope 1+2: 49 Scope 1+2+3: 89	Scope 1+2: 49 Scope 1+2+3: 90
Ecosystem protection & Deforestation policy			Scope 1+2+3: 948.691		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1568.613	Scope 1+2+3: 89	Scope 1+2+3: 90
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	7.1	98	99
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy	Share of non-renewable energy	Energy Consumption: 70.03	Energy Consumption: 94	Energy Consumption: 95

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	consumption and production	consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Production: 84.93	Energy Production: 1	Energy Production: 1
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	33.54	79	80
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	98	99
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	31.84	98	98
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	26	27

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible

assets without available data” refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies’ revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
COMFORT SYSTEMS USA INC XNYS USD	Construction of buildings	0.98%	US
EAST WEST BANCORP INC XNGS USD	Financial service activities, except insurance and pension funding	0.88%	US
VIATRIS INC XNGS USD	Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.76%	US
ENSIGN GROUP INC/THE XNGS USD	Residential care activities	0.73%	US
ALBERTSONS COS INC - CLASS A XNYS USD	Retail trade, except of motor vehicles and motorcycles	0.68%	US
OVINTIV INC XNYS USD	Extraction of crude petroleum and natural gas	0.68%	US
ZIONS BANCORP NA XNGS USD	Financial service activities, except insurance and pension funding	0.65%	US
ALLISON TRANSMISSION HOLDING XNYS USD	Manufacture of motor vehicles, trailers and semi-trailers	0.63%	US
BORGWARNER INC XNYS USD	Manufacture of motor vehicles, trailers and semi-trailers	0.63%	US
FLEX LTD XNGS USD	Manufacture of computer, electronic and optical products	0.61%	US
BIOGEN INC XNGS USD	Scientific research and development	0.6%	US
MGIC INVESTMENT CORP XNYS USD	Financial service activities, except insurance and pension funding	0.6%	US
INVESCO LTD XNYS USD	Activities auxiliary to financial services and insurance activities	0.59%	US
SKYWORKS SOLUTIONS INC XNGS USD	Manufacture of computer, electronic and optical products	0.59%	US
SPROUTS FARMERS MARKET INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	0.57%	US

The portfolio proportions of investments presented above are an average over the reference period.

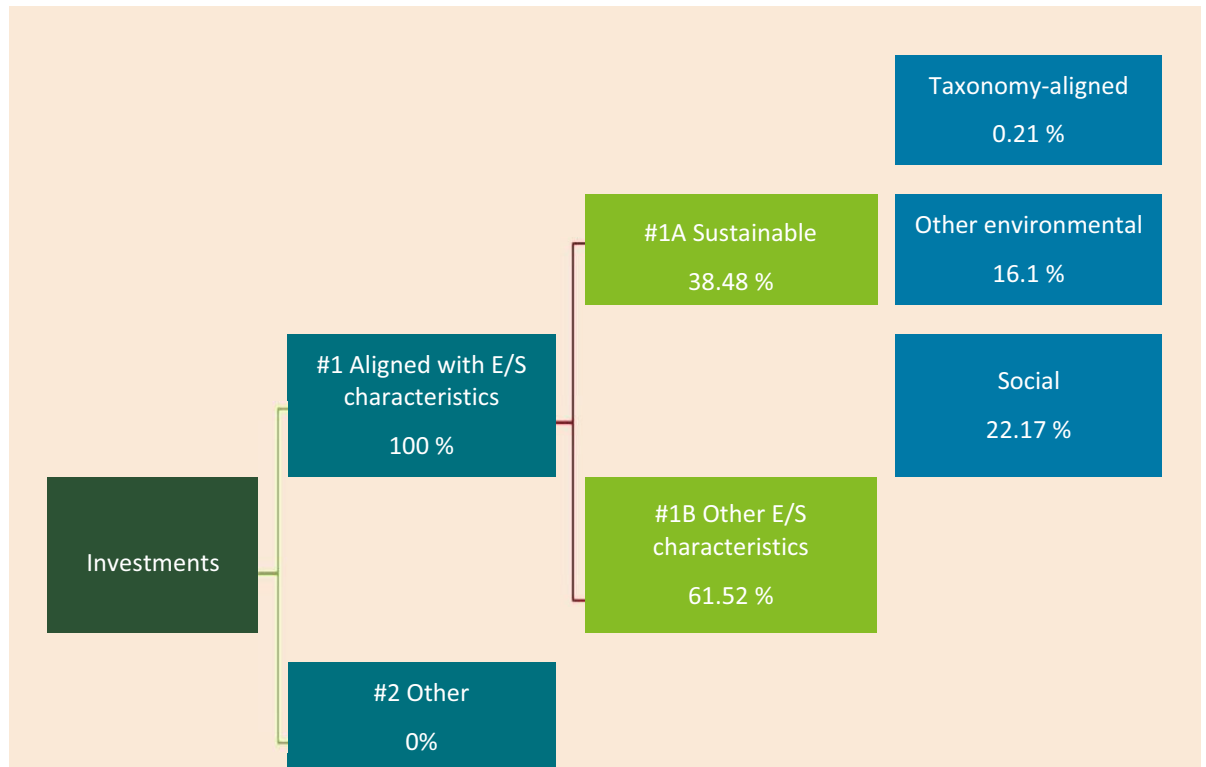

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Publishing activities	8.83%
Financial service activities, except insurance and pension funding	8.47%
Retail trade, except of motor vehicles and motorcycles	6.08%
Manufacture of computer, electronic and optical products	5.92%
Activities auxiliary to financial services and insurance activities	5.49%

Real estate activities	4.61%
Manufacture of machinery and equipment n.e.c.	3.83%
Manufacture of motor vehicles, trailers and semi-trailers	3.58%
Mining of metal ores	3.38%
Insurance, reinsurance and pension funding, except compulsory social security	3.13%
Construction of buildings	2.9%
Manufacture of chemicals and chemical products	2.79%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.48%
Electricity, gas, steam and air conditioning supply	2.25%
Other manufacturing	2.24%
Computer programming, consultancy and related activities	2.21%
Scientific research and development	2.21%
Extraction of crude petroleum and natural gas	2.15%
Manufacture of electrical equipment	2.09%
Human health activities	1.68%
Civil engineering	1.62%
Wholesale trade, except of motor vehicles and motorcycles	1.6%
Security and investigation activities	1.38%
Education	1.21%
Food and beverage service activities	1.18%
Manufacture of basic metals	1.1%
Information service activities	0.87%
Rental and leasing activities	0.8%
Residential care activities	0.78%
Manufacture of fabricated metal products, except machinery and equipment	0.77%
Warehousing and support activities for transportation	0.73%
Activities of head offices, management consultancy activities	0.73%
Manufacture of beverages	0.66%
Mining support service activities	0.65%
Manufacture of other non-metallic mineral products	0.64%
Other	0.61%
Manufacture of food products	0.61%
Motion picture, video and television programme production, sound recording and music publishing activity	0.6%
Employment activities	0.57%
Manufacture of rubber and plastic products	0.56%
Manufacture of other transport equipment	0.49%
Telecommunications	0.48%
Manufacture of furniture	0.45%
Accommodation	0.45%
Manufacture of paper and paper products	0.37%
Manufacture of leather and related products	0.35%
Gambling and betting activities	0.35%
Air transport	0.35%
Legal and accounting activities	0.35%
Crop and animal production, hunting and related service activities	0.32%
Services to buildings and landscape activities	0.23%
Land transport and transport via pipelines	0.22%

Manufacture of textiles	0.22%
Office administrative, office support and other business support activities	0.21%
Manufacture of wearing apparel	0.2%
Architectural and engineering activities, technical testing and analysis	0.17%
Printing and reproduction of recorded media	0.16%
Programming and broadcasting activities	0.16%
Other mining and quarrying	0.14%
Water transport	0.11%
Fishing and aquaculture	0.09%
Other personal service activities	0.06%
Creative, arts and entertainment activities	0.03%
Public administration and defence, compulsory social security	0.03%
Advertising and market research	0.03%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

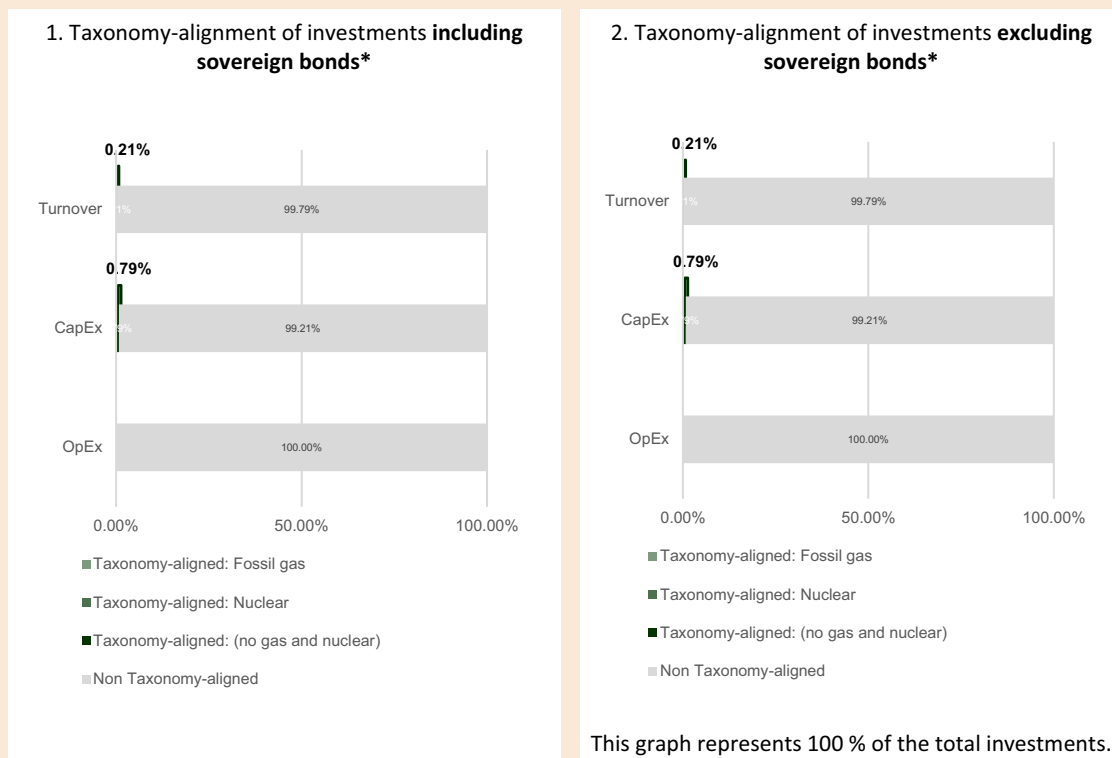

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.21%	0.08%	0.00%	0.00%
CapEx-based	0.79%	0.21%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 16.1% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 22.17% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Strategic Income (the “Financial Product”)

Legal Entity Identifier: 213800DR687J9C7WK742

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="checkbox"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 27.16 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.3 / 10	6.04 / 10	98.53 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	6.16 / 10	6 / 10	98.13 %
ESG Score	2023	6.11 / 10	5.98 / 10	98.39 %
ESG Score	2022	6.09 / 10	5.86 / 10	98.93 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 30 Relative number: 30	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 20207.279	Scope 1: 44	Scope 1: 69
Ecosystem protection & Deforestation policy			Scope 2: 2859.261		
			Scope 3: 213189.906	Scope 3: 39	Scope 3: 61
			Scope 1+2: 23075.383	Scope 1+2: 45	Scope 1+2: 69
			Scope 1+2+3: 234883.031	Scope 1+2+3: 39	Scope 1+2+3: 61
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 64.62	Scope 1+2: 22	Scope 1+2: 36
Ecosystem protection & Deforestation policy			Scope 1+2+3: 439.042		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1763.006	Scope 1+2+3: 27	Scope 1+2+3: 43
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	7.87	45	69
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 62.7 Energy Production: 59.84	Energy Consumption: 31 Energy Production: 2	Energy Consumption: 48 Energy Production: 3
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	14.14	40	62

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	57	92
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	35.63	33	51
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	17	26

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
TII 0.375% - 15/07/2027 CPI	Public administration and defence, compulsory social security	4.78%	US
T 2% - 15/02/2050	Public administration and defence, compulsory social security	3.43%	US

The portfolio proportions of investments presented above are an average over the reference period.

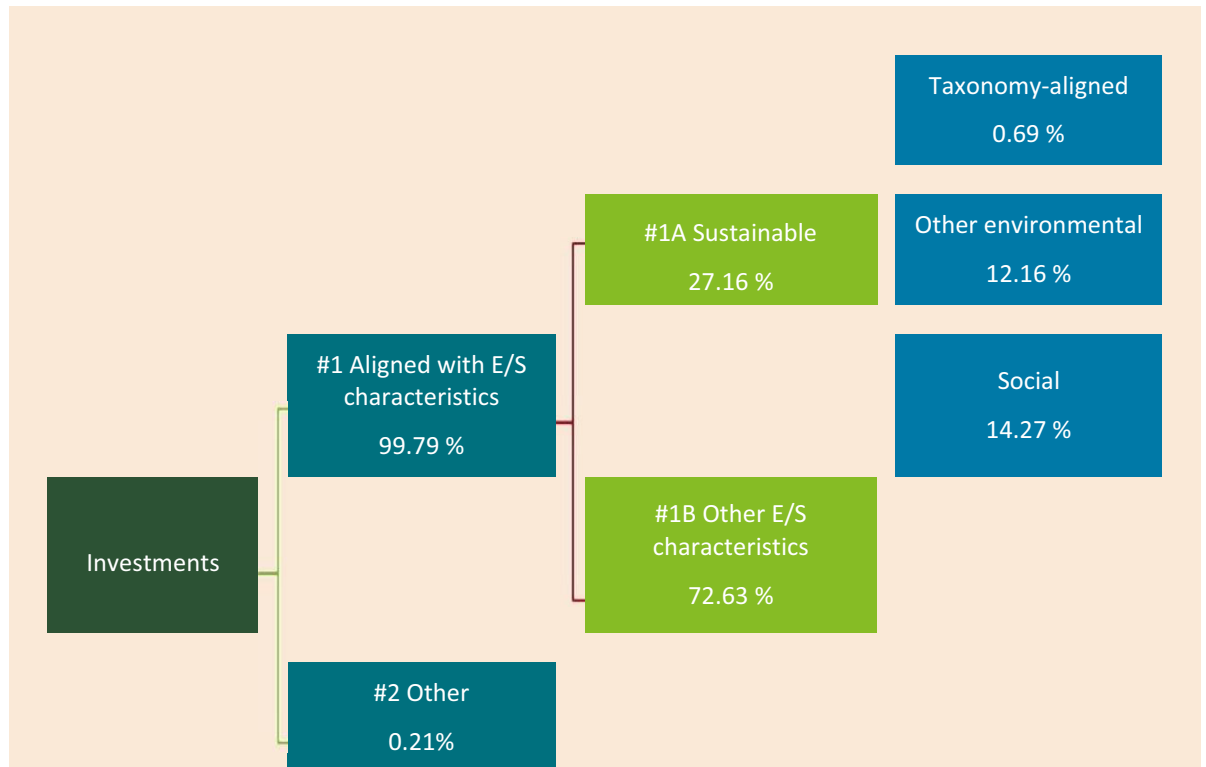

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	30.4%
Financial service activities, except insurance and pension funding	11.42%
Insurance, reinsurance and pension funding, except compulsory social security	6.22%
Other	5.68%
Publishing activities	3.37%

Manufacture of coke and refined petroleum products	3.2%
Electricity, gas, steam and air conditioning supply	3.15%
Real estate activities	2.99%
Land transport and transport via pipelines	2.93%
Manufacture of chemicals and chemical products	2.53%
Human health activities	2.19%
Activities auxiliary to financial services and insurance activities	2.15%
Telecommunications	1.8%
Security and investigation activities	1.61%
Manufacture of machinery and equipment n.e.c.	1.57%
Manufacture of food products	1.45%
Retail trade, except of motor vehicles and motorcycles	1.34%
Manufacture of fabricated metal products, except machinery and equipment	1.03%
Gambling and betting activities	1%
Mining of metal ores	0.92%
Manufacture of paper and paper products	0.9%
Wholesale trade, except of motor vehicles and motorcycles	0.81%
Water transport	0.77%
Extraction of crude petroleum and natural gas	0.77%
Manufacture of electrical equipment	0.74%
Other manufacturing	0.73%
Office administrative, office support and other business support activities	0.73%
Manufacture of computer, electronic and optical products	0.72%
Warehousing and support activities for transportation	0.65%
Manufacture of motor vehicles, trailers and semi-trailers	0.61%
Information service activities	0.59%
Construction of buildings	0.53%
Food and beverage service activities	0.53%
Computer programming, consultancy and related activities	0.41%
Manufacture of other non-metallic mineral products	0.4%
Rental and leasing activities	0.33%
Advertising and market research	0.3%
Sports activities and amusement and recreation activities	0.28%
Other personal service activities	0.25%
Legal and accounting activities	0.24%
Motion picture, video and television programme production, sound recording and music publishing activity	0.24%
Manufacture of wearing apparel	0.2%
Programming and broadcasting activities	0.19%
Scientific research and development	0.18%
Civil engineering	0.18%
Manufacture of basic metals	0.16%
Manufacture of rubber and plastic products	0.14%
Accommodation	0.14%
Activities of extraterritorial organisations and bodies	0.12%
Travel agency, tour operator reservation service and related activities	0.1%
Mining support service activities	0.06%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	0.03%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
 - In fossil gas
 - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.69%	1.05%	0.00%	0.00%
CapEx-based	1.30%	1.75%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 12.16% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 14.27% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.21% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Global Sustainable Equity (the “Financial Product”)

Legal Entity Identifier: 213800JV6SWHHVLI1166

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●○ <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 74.16 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Water Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon Intensity and Water Intensity during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon Intensity indicator and iii) 70% for the Water Intensity indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	91.21 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	109.73 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	82.79 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	88.4 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	121.07 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	98.94 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the "do not significantly harm" principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a

quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.

- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

		applicable, national law		
--	--	--------------------------	--	--

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 3: GHG intensity of investee companies
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises
Controversial weapons policy	PAI 14: Exposure to controversial weapons

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of AXA IM's exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark.

The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund tends to invest in companies with a strong ESG profile through the implementation of an SRI strategy.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the “current value of all investments” as defined by the Regulation, or on “eligible assets with available data only” where relevant. For the purpose of this document, “eligible assets with available data only” refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. “Eligible assets without available data” refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies’ revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	6.9%	US
MICROSOFT CORP XNGS USD	Publishing activities	6.16%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	4.37%	US
ALPHABET INC-CL C XNGS USD	Information service activities	3.58%	US
Portfolio 105422 USD SET SSX	Other	2.96%	N/A
JPMORGAN CHASE & CO XNYS USD	Financial service activities, except insurance and pension funding	2.9%	US
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	2.55%	US
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	2.42%	US
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.41%	GB
PARKER HANNIFIN CORP XNYS USD	Manufacture of electrical equipment	2.35%	US
SIEMENS AG-REG XETR EUR	Manufacture of electrical equipment	2.28%	DE
BROADCOM INC XNGS USD	Manufacture of computer, electronic and optical products	2.23%	US
AMERICAN EXPRESS CO XNYS USD	Financial service activities, except insurance and pension funding	2.18%	US
UBER TECHNOLOGIES INC XNYS USD	Information service activities	2.16%	US
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	1.96%	FR

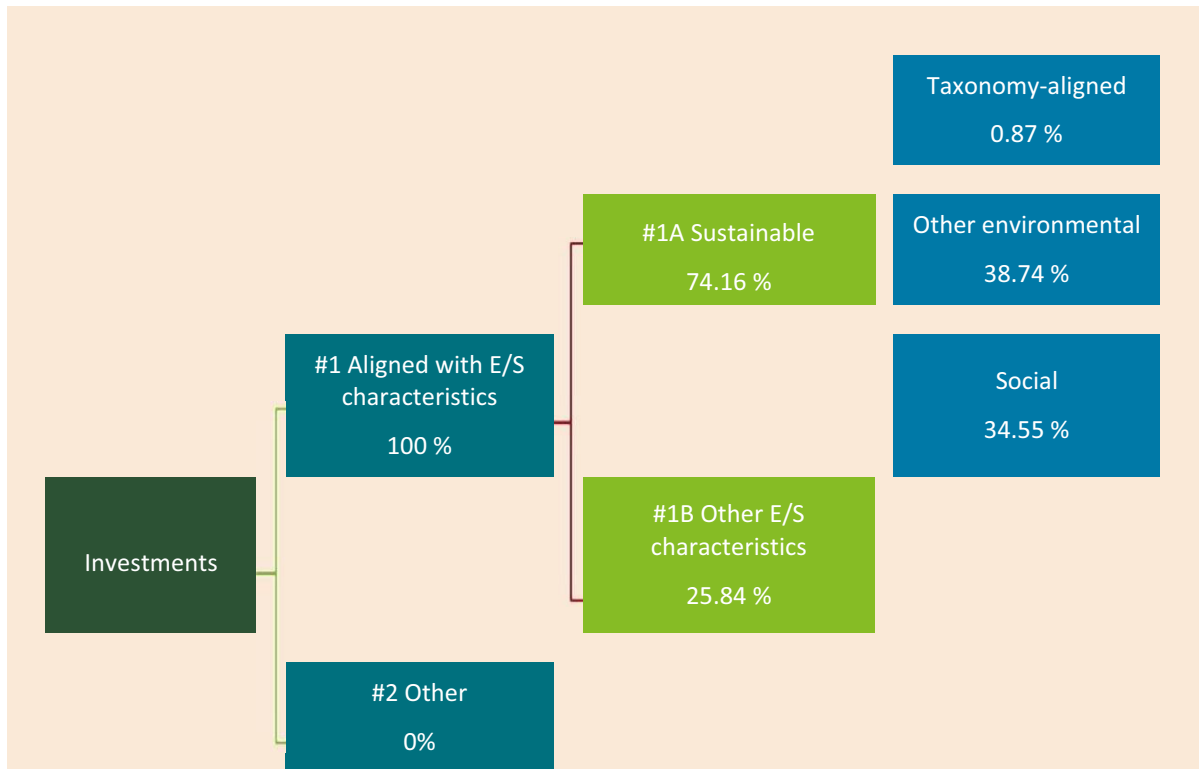

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Manufacture of computer, electronic and optical products	17.12%
Publishing activities	13.41%
Financial service activities, except insurance and pension funding	9.09%
Information service activities	8.82%
Manufacture of electrical equipment	6.59%

Activities auxiliary to financial services and insurance activities	6.28%
Manufacture of machinery and equipment n.e.c.	5.48%
Retail trade, except of motor vehicles and motorcycles	4.37%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.96%
Manufacture of chemicals and chemical products	3.14%
Insurance, reinsurance and pension funding, except compulsory social security	3.01%
Other	2.99%
Manufacture of paper and paper products	2.31%
Other manufacturing	2.23%
Electricity, gas, steam and air conditioning supply	2.18%
Waste collection, treatment and disposal activities, materials recovery	1.57%
Legal and accounting activities	1.52%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	1.18%
Real estate activities	1.1%
Manufacture of rubber and plastic products	1.09%
Manufacture of leather and related products	0.77%
Gambling and betting activities	0.53%
Wholesale trade, except of motor vehicles and motorcycles	0.51%
Food and beverage service activities	0.43%
Manufacture of beverages	0.32%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments		
	2025	2024
Revenue-based	0.87%	1.08%
CapEx-based	2.16%	1.26%
OpEx-based	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 38.74% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 34.55% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Financial Product has been awarded with the French Label ISR in 2024 and therefore applied continuously the label’s requirements since its labelling into its daily management during the reference period. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Inflation Plus **Legal Entity Identifier:** 213800SEIJNDIJ1AQP03
(the “Financial Product”)

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 13.14 % of sustainable investments
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	6.5 / 10	6.19 / 10	99.89 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	6.46 / 10	6.16 / 10	99.94 %
ESG Score	2023	6.34 / 10	6.07 / 10	99.86 %
ESG Score	2022	6.35 / 10	6.06 / 10	99.73 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 82 Relative number: 82	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 365.675	Scope 1: 13	Scope 1: 95
Ecosystem protection & Deforestation policy			Scope 2: 88.001	Scope 2: 13	Scope 2: 95
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO ₂ e/€M)	Scope 3: 2102.693	Scope 3: 10	Scope 3: 73
Ecosystem protection & Deforestation policy			Scope 1+2: 453.677	Scope 1+2: 13	Scope 1+2: 95
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO ₂ e/€M)	Scope 1+2+3: 2547.384	Scope 1+2+3: 10	Scope 1+2+3: 73

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
UKT 4.125% - 29/01/2027	Public administration and defence, compulsory social security	11.96%	GB
TII 1.625% - 15/10/2029 CPI	Public administration and defence, compulsory social security	7.73%	US
TII 1.875% - 15/07/2035 CPI	Public administration and defence, compulsory social security	6.19%	US
UKT 4.375% - 07/03/2030	Public administration and defence, compulsory social security	5.31%	GB
AXA IM EURO LIQUIDITY SRI Capitalisation EUR pf	Financial service activities, except insurance and pension funding	5.06%	FR
TII 1.625% - 15/10/2027 CPI	Public administration and defence, compulsory social security	4.34%	US
OBL 2.4% - 18/04/2030	Public administration and defence, compulsory social security	3.97%	DE
UKT 0.125% - 31/01/2028	Public administration and defence, compulsory social security	3.94%	GB
TII 1.625% - 15/04/2030 CPI	Public administration and defence, compulsory social security	3.41%	US
BTF 0 - 18/02/2026	Public administration and defence, compulsory social security	3.33%	FR
BTPS 1.8% - 15/05/2036 CPI	Public administration and defence, compulsory social security	2.96%	IT
UKTI 1.25% - 22/11/2027 CPI	Public administration and defence, compulsory social security	2.31%	GB

BTPS 1.5% - 15/05/2029 CPI	Public administration and defence, compulsory social security	1.86%	IT
SPGB 1.25% - 31/10/2030	Public administration and defence, compulsory social security	1.84%	ES

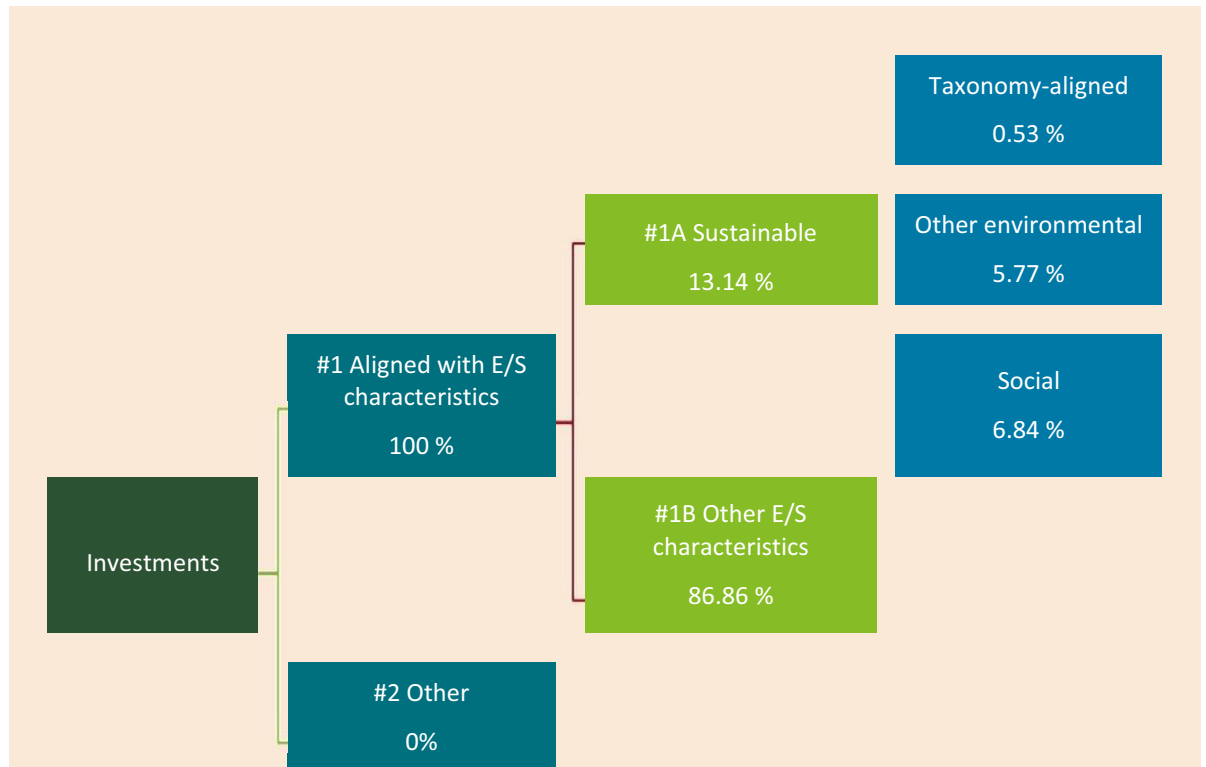

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Public administration and defence, compulsory social security	82.25%
Financial service activities, except insurance and pension funding	12.23%
Other	2.27%
Real estate activities	1.79%
Telecommunications	0.77%

Water collection, treatment and supply	0.36%
Electricity, gas, steam and air conditioning supply	0.34%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 100 % of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.53%	1.34%	0.00%	0.00%
CapEx-based	1.23%	1.01%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 5.77% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 6.84% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Italy Equity
(the “Financial Product”)

Legal Entity Identifier: 213800LNEKJGN8QM7D48

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●○ <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 62.46 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human rights violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	129.41 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	144.1 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	82.17 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... **And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	130.11 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	168.98 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	97.2 %
Carbon intensity	2023	176.41 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	185.02 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.28 %
Carbon intensity	2022	226.13 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	267.01 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.12 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 1946.648 Scope 2: 485.091 Scope 3: 36736.711 Scope 1+2: 2431.738 Scope 1+2+3: 39149.336	Scope 1: 96 Scope 2: 96 Scope 3: 86 Scope 1+2: 96 Scope 1+2+3: 86	Scope 1: 97 Scope 2: 97 Scope 3: 88 Scope 1+2: 97 Scope 1+2+3: 88

Social and Governance:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	95	96
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	13.68 %	96	97
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	19.5%	69	70
SDG no significantly negative score	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	43.13	96	97
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	26	26

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 1946.648 Scope 2: 485.091 Scope 3: 36736.711 Scope 1+2: 2431.738 Scope 1+2+3: 39149.336	Scope 1: 96 Scope 2: 96 Scope 3: 86 Scope 1+2: 96 Scope 1+2+3: 86	Scope 1: 97 Scope 2: 97 Scope 3: 88 Scope 1+2: 97 Scope 1+2+3: 88
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 48.996 Scope 1+2+3: 1089.216	Scope 1+2: 48 Scope 1+2+3: 86	Scope 1+2: 49 Scope 1+2+3: 88
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 2685.127	Scope 1+2+3: 86	Scope 1+2+3: 88
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	10.77	96	97
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	31.05	81	83
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	95	96
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	26	26

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
• AXA IM ESG Standards policy, through the exclusion of investee countries with	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all)	N/A	Absolute number: 0 Relative number: 0	N/A

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

severe social violations • Compliance black-list based on international and EU sanctions		investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
INTESA SANPAOLO MTAA EUR	Financial service activities, except insurance and pension funding	9.87%	IT
ENEL SPA MTAA EUR	Electricity, gas, steam and air conditioning supply	9.44%	IT
BANCO BPM SPA MTAA EUR	Financial service activities, except insurance and pension funding	7.73%	IT
FINECOBANK SPA MTAA EUR	Financial service activities, except insurance and pension funding	7.43%	IT
BPER BANCA SPA MTAA EUR	Financial service activities, except insurance and pension funding	4.75%	IT
PRYSMIAN SPA MTAA EUR	Manufacture of fabricated metal products, except machinery and equipment	4.67%	IT
TERNA-RETE ELETTRICA NAZIONALE MTAA EUR	Electricity, gas, steam and air conditioning supply	4.07%	IT
ERG SPA MTAA EUR	Electricity, gas, steam and air conditioning supply	3.98%	IT
BANCA MONTE DEI PASCHI SIENA MTAA EUR	Financial service activities, except insurance and pension funding	3.26%	IT
FERRARI NV MTAA EUR	Manufacture of motor vehicles, trailers and semi-trailers	3.24%	IT
STELLANTIS NV MTAA EUR	Manufacture of motor vehicles, trailers and semi-trailers	2.71%	NL
TELECOM ITALIA-RSP MTAA EUR	Telecommunications	2.63%	IT
STMICROELECTRONICS NV MTAA EUR	Manufacture of computer, electronic and optical products	2.54%	CH
INTERPUMP GROUP SPA MTAA EUR	Manufacture of machinery and equipment n.e.c.	2.25%	IT
MEDIOBANCA SPA MTAA EUR	Financial service activities, except insurance and pension funding	1.81%	IT

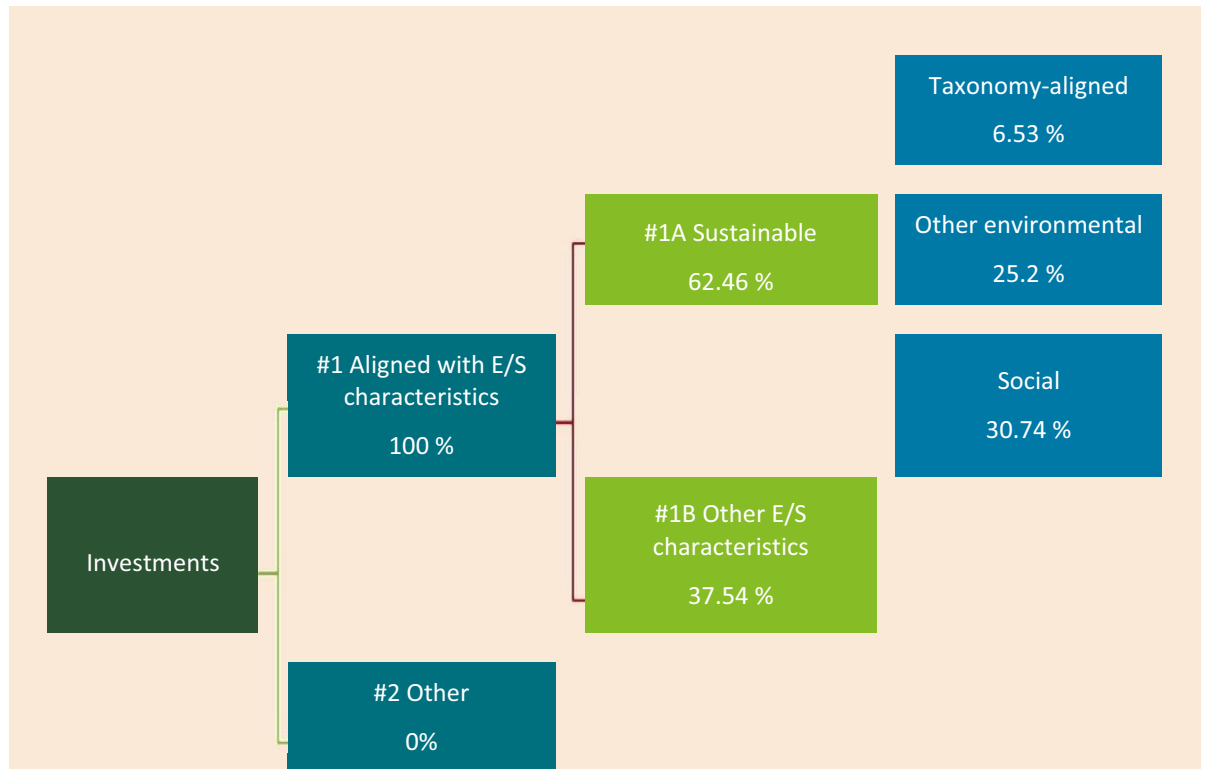

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	36.37%
Electricity, gas, steam and air conditioning supply	18.81%
Manufacture of motor vehicles, trailers and semi-trailers	7.5%
Manufacture of machinery and equipment n.e.c.	6.32%
Manufacture of fabricated metal products, except machinery and equipment	4.67%

Manufacture of computer, electronic and optical products	3.97%
Publishing activities	2.69%
Telecommunications	2.63%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.19%
Wholesale trade, except of motor vehicles and motorcycles	1.99%
Manufacture of electrical equipment	1.8%
Manufacture of chemicals and chemical products	1.64%
Other manufacturing	1.6%
Computer programming, consultancy and related activities	1.55%
Manufacture of other transport equipment	1.12%
Manufacture of beverages	1.11%
Manufacture of wearing apparel	0.93%
Manufacture of other non-metallic mineral products	0.88%
Real estate activities	0.65%
Manufacture of food products	0.59%
Postal and courier activities	0.51%
Other	0.25%
Activities auxiliary to financial services and insurance activities	0.23%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	6.53%	12.35%	0.00%	0.00%
CapEx-based	22.26%	21.86%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 25.2% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 30.74% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Multi Asset People & Planet (the “Financial Product”)

Legal Entity Identifier: 213800JXTZ2GEXH1UT05

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> YES	<input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 57.47%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 38.72%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon Intensity
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Investment Universe	Coverage
Carbon Intensity	144.79 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	257.23 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	86.4 %
Women on Board	37.17 % of women on board (for corporates only)	32.06 % of women on board (for corporates only)	99 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Investment Universe	Coverage
Carbon Intensity	2024	163.93 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	277.36 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	98.65 %
Women on Board	2024	37.41 % of women on board (for corporates only)	31.08 % of women on board (for corporates only)	98.19 %
Carbon intensity	2023	198.1 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	291.63 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.6 %
% of companies in the GSS Watchlist & Non-compliant	2023	3.84 % of invested companies in the GSS Watchlist & Non-compliant	5.76 % of invested companies in the GSS Watchlist & Non-compliant	82.65 %
Carbon Delta Technology Opportunity (1.5C)	2022	21.61 % of the invested companys market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable General Equilibrium (AIM/CGE) model	8.91 % of the invested companys market value capped at 100%, assuming a global 1.5°C target that reflects the goals of the Paris Agreement and calculated using carbon prices from the Asia-Pacific Integrated Modelling/Computable General Equilibrium (AIM/CGE) model	93.74 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	27	31

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 7 Relative number: 7	Absolute number: 78 Relative number: 78

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of our exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark. The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund invest in companies that are deemed impactful through the implementation of an Impact analysis.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in

this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
MICROSOFT CORP XNGS USD	Publishing activities	2.95%	US
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	2.7%	US
REPUBLIC SERVICES INC XNYS USD	Waste collection, treatment and disposal activities, materials recovery	2.09%	US
SAP SE XETR EUR	Publishing activities	2.06%	DE
CADENCE DESIGN SYS INC XNGS USD	Publishing activities	1.95%	US
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	1.91%	FR
INTUIT INC XNGS USD	Publishing activities	1.88%	US
XYLEM INC XNYS USD	Manufacture of machinery and equipment n.e.c.	1.85%	US

PALO ALTO NETWORKS INC XNGS USD	Publishing activities	1.81%	US
NATIONAL GRID PLC XLON GBP	Electricity, gas, steam and air conditioning supply	1.76%	GB
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	1.73%	US
VEEVA SYSTEMS INC-CLASS A XNYS USD	Publishing activities	1.73%	US
S&P GLOBAL INC XNYS USD	Information service activities	1.73%	US
THERMO FISHER SCIENTIFIC INC XNYS USD	Manufacture of computer, electronic and optical products	1.67%	US

The portfolio proportions of investments presented above are an average over the reference period.

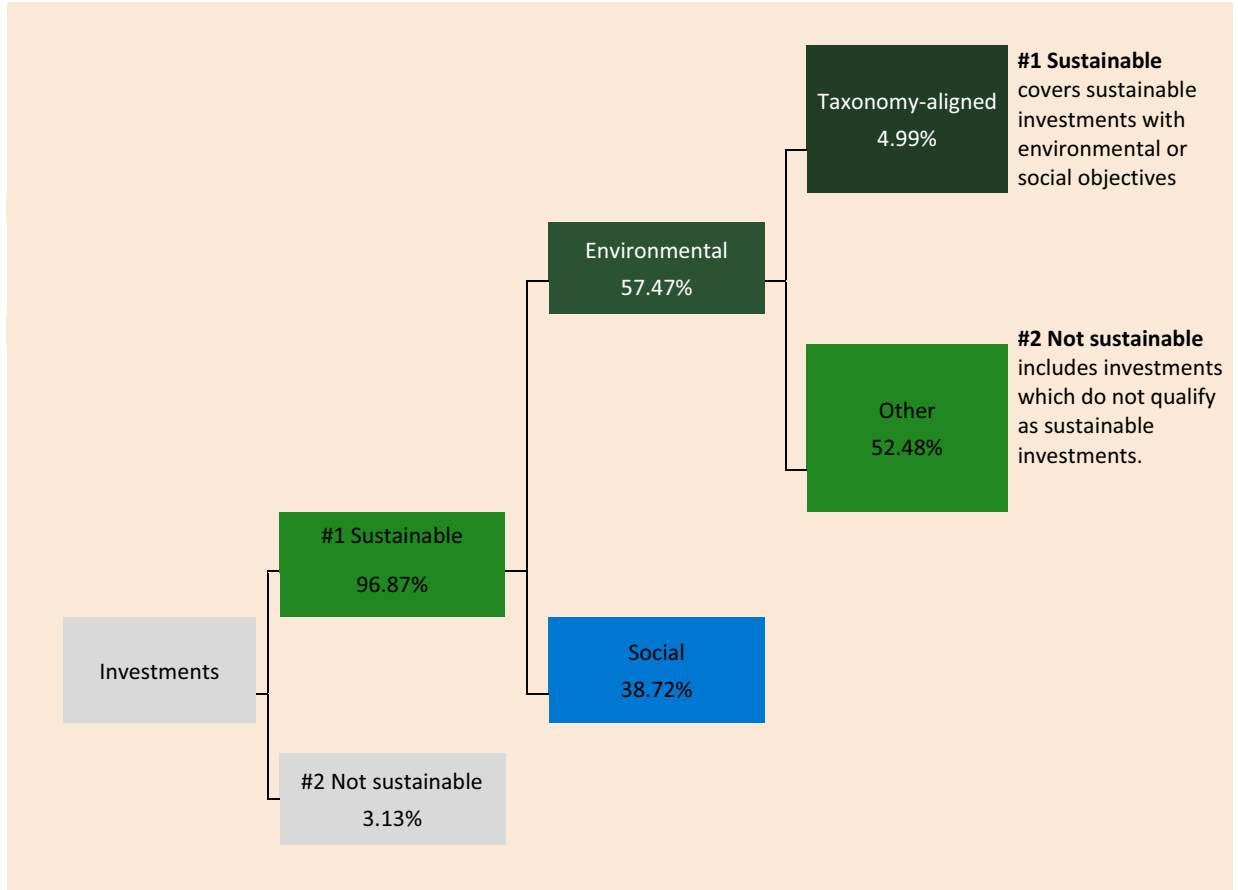

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Publishing activities	16.35%
Manufacture of machinery and equipment n.e.c.	8.96%
Electricity, gas, steam and air conditioning supply	8.45%
Manufacture of computer, electronic and optical products	8.28%
Financial service activities, except insurance and pension funding	8.18%
Public administration and defence, compulsory social security	6.45%
Manufacture of chemicals and chemical products	5.74%
Other manufacturing	4.44%
Other	3.39%
Real estate activities	3.11%
Manufacture of electrical equipment	2.85%

Insurance, reinsurance and pension funding, except compulsory social security	2.22%
Waste collection, treatment and disposal activities, materials recovery	2.12%
Information service activities	2.04%
Activities auxiliary to financial services and insurance activities	1.76%
Architectural and engineering activities, technical testing and analysis	1.49%
Activities of extraterritorial organisations and bodies	1.48%
Water collection, treatment and supply	1.46%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.43%
Manufacture of paper and paper products	1.25%
Manufacture of motor vehicles, trailers and semi-trailers	1.22%
Warehousing and support activities for transportation	1.06%
Legal and accounting activities	0.85%
Retail trade, except of motor vehicles and motorcycles	0.79%
Manufacture of fabricated metal products, except machinery and equipment	0.72%
Telecommunications	0.65%
Land transport and transport via pipelines	0.54%
Rental and leasing activities	0.38%
Civil engineering	0.26%
Computer programming, consultancy and related activities	0.26%
Repair and installation of machinery and equipment	0.24%
Other personal service activities	0.23%
Postal and courier activities	0.22%
Manufacture of rubber and plastic products	0.18%
Accommodation	0.18%
Scientific research and development	0.18%
Construction of buildings	0.16%
Manufacture of other non-metallic mineral products	0.12%
Sports activities and amusement and recreation activities	0.11%
Manufacture of beverages	0.1%
Manufacture of wearing apparel	0.09%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	0.01%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of: - **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	4.99%	8.01%	0.00%	10.00%
CapEx-based	4.86%	6.36%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 52.48% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 38.72 % of sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 3.13% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product’s investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product Name: AXA World Funds Optimal Income (the "Financial Product")

Legal Entity Identifier: 2138003LHHRO8T77DX76

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> YES	<input type="radio"/> <input checked="" type="radio"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 77.14 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Women on Board

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has reduced its investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and ESG Score to the exception of cash held on an ancillary basis and Solidarity Assets.

Sustainability KPI Name	Value	Investment Universe	Coverage
Carbon Intensity	122.13 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	181.71 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	82.44 %
Women on Board	41.76 % of women on board (for corporates only)	36.46 % of women on board (for corporates only)	97.48 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Sustainability KPI Name	Year	Value	Investment Universe	Coverage
Carbon Intensity	2024	161.15 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	193.41 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	97.38 %
Women on Board	2024	42.74 % of women on board (for corporates only)	36.33 % of women on board (for corporates only)	97.33 %
Carbon intensity	2023	176.02 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	207.46 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	96.87 %
Women on Board	2023	40.92 % of women on board	35.57 % of women on board	94.51 %
Carbon intensity	2022	186.5 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	265.32 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	95.82 %
Women on Board	2022	40.34 % of women on board	34.65 % of women on board	95.44 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission's ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as "sustainable investments" under AXA IM's SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM's internal analysis process are considered as "sustainable investments". This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer's sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target's ambition, (iii) bond characteristics and (iv) sustainability performance target's monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the "do not significantly harm" principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below -5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to 'significantly contributing' to -10 corresponding to 'significantly obstructing', unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM's sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts ("PAIs") indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under - 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact' to - 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 97 Relative number: 97

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 10017.379	Scope 1: 93	Scope 1: 97
Ecosystem protection & Deforestation policy			Scope 2: 4555.466	Scope 2: 92	Scope 2: 97
			Scope 3: 226807.469	Scope 3: 77	Scope 3: 81
			Scope 1+2: 14574.41	Scope 1+2: 93	Scope 1+2: 97
			Scope 1+2+3: 239155.281	Scope 1+2+3: 77	Scope 1+2+3: 81

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the “current value of all investments” as defined by the Regulation, or on “eligible assets with available data only” where relevant. For the purpose of this document, “eligible assets with available data only” refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. “Eligible assets without available data” refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies’ revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	3.59%	NL
SAP SE XETR EUR	Publishing activities	2.61%	DE
BANCO BILBAO VIZCAYA ARGENTA XMAD EUR	Financial service activities, except insurance and pension funding	2.39%	ES
AIR LIQUIDE SA-PF EUR	Manufacture of chemicals and chemical products	2.07%	FR
PRYSMIAN SPA MTA EUR	Manufacture of fabricated metal products, except machinery and equipment	1.63%	IT
SAFRAN SA XPAR EUR	Manufacture of other transport equipment	1.47%	FR
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	1.47%	FR
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.39%	GB
VOLVO AB-B SHS XSTO SEK	Manufacture of motor vehicles, trailers and semi-trailers	1.35%	SE

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	23.98%
Electricity, gas, steam and air conditioning supply	7.14%
Manufacture of machinery and equipment n.e.c.	5.66%
Other	5.3%
Manufacture of chemicals and chemical products	3.89%

Publishing activities	3.83%
Real estate activities	3.62%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.5%
Insurance, reinsurance and pension funding, except compulsory social security	3.46%
Telecommunications	3.42%
Manufacture of other transport equipment	2.99%
Activities auxiliary to financial services and insurance activities	2.57%
Manufacture of electrical equipment	2.53%
Manufacture of motor vehicles, trailers and semi-trailers	2.23%
Manufacture of computer, electronic and optical products	2.21%
Manufacture of coke and refined petroleum products	2.2%
Retail trade, except of motor vehicles and motorcycles	1.75%
Manufacture of fabricated metal products, except machinery and equipment	1.71%
Other manufacturing	1.4%
Travel agency, tour operator reservation service and related activities	1.15%
Manufacture of leather and related products	1.12%
Legal and accounting activities	1.09%
Manufacture of other non-metallic mineral products	1.06%
Advertising and market research	1.02%
Manufacture of paper and paper products	1%
Information service activities	0.95%
Manufacture of beverages	0.94%
Manufacture of food products	0.84%
Human health activities	0.84%
Civil engineering	0.8%
Scientific research and development	0.77%
Warehousing and support activities for transportation	0.64%
Rental and leasing activities	0.55%
Manufacture of rubber and plastic products	0.45%
Water collection, treatment and supply	0.42%
Food and beverage service activities	0.39%
Manufacture of wearing apparel	0.35%
Postal and courier activities	0.26%
Public administration and defence, compulsory social security	0.24%
Computer programming, consultancy and related activities	0.23%
Security and investigation activities	0.2%
Construction of buildings	0.2%
Waste collection, treatment and disposal activities, materials recovery	0.19%
Architectural and engineering activities, technical testing and analysis	0.18%
Services to buildings and landscape activities	0.15%
Land transport and transport via pipelines	0.14%
Office administrative, office support and other business support activities	0.13%
Manufacture of basic metals	0.11%
Wholesale trade, except of motor vehicles and motorcycles	0.08%
Mining of metal ores	0.05%
Water transport	0.05%
Air transport	0.02%

Motion picture, video and television programme production, sound recording and music publishing activity	0.01%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.

- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

This graph represents 100 % of the total investments.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	3.10%	4.05%	0.00%	0.00%
CapEx-based	9.17%	7.09%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 35.19% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 38.62% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.01% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity or debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds People & Planet Equity (the “Financial Product”)

Legal Entity Identifier: 213800DW4R9H3NOZT149

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 45.48%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 52.98%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Carbon Intensity
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainability indicators perform?

During the reference period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	106.1 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	128.75 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	83.33 %
Women on Board	35.78 % of women on board (for corporates only)	34.2 % of women on board (for corporates only)	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... and compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	54.77 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	160.87 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	100 %
Women on Board	2024	38 % of women on board (for corporates only)	33.99 % of women on board (for corporates only)	100 %
Carbon intensity	2023	80.5 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	173.19 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Water Intensity	2023	1547.15 Thousands of cubic meters for corporates	5549.86 Thousands of cubic meters for corporates	100 %
Carbon intensity	2022	75.9 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	238.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Water intensity	2022	897.18 Thousands of cubic meters for corporates	11618.89 Thousands of cubic meters for corporates	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA

IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM's exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts ("PAIs") indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to 'significant contributing impact' to – 10 corresponding to 'significant obstructing impact'), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 1002.972 Scope 2: 559.695 Scope 3: 24826.219 Scope 1+2: 1562.666 Scope 1+2+3: 26280.475	Scope 1: 98 Scope 2: 98 Scope 3: 85 Scope 1+2: 98 Scope 1+2+3: 85	Scope 1: 100 Scope 2: 100 Scope 3: 86 Scope 1+2: 100 Scope 1+2+3: 86

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial	0	32	33

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

		weapons (% of AuM)			
--	--	--------------------	--	--	--

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider's screening framework and excludes any companies that have been assessed as "non-compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 3: GHG intensity of investee companies
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity
Controversial weapons policy	PAI 14: Exposure to controversial weapons

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of our exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark. The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund invest in companies that are deemed impactful through the implementation of an Impact analysis.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
MICROSOFT CORP XNGS USD	Publishing activities	4.15%	US
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	3.92%	US
SAP SE XETR EUR	Publishing activities	3.07%	DE
AUTODESK INC XNGS USD	Publishing activities	2.88%	US
ELI LILLY & CO XNYS USD	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.87%	US
XYLEM INC XNYS USD	Manufacture of machinery and equipment n.e.c.	2.84%	US
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	2.84%	FR
CADENCE DESIGN SYS INC XNGS USD	Publishing activities	2.64%	US
THERMO FISHER SCIENTIFIC INC XNYS USD	Manufacture of computer, electronic and optical products	2.54%	US
INTUIT INC XNGS USD	Publishing activities	2.53%	US
TAIWAN SEMICONDUCTOR MANUFAC XTAI TWD	Manufacture of machinery and equipment n.e.c.	2.51%	TW
REPUBLIC SERVICES INC XNYS USD	Waste collection, treatment and disposal activities, materials recovery	2.41%	US
S&P GLOBAL INC XNYS USD	Information service activities	2.4%	US
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	2.39%	US
LINDE PLC XNGS USD	Manufacture of chemicals and chemical products	2.38%	US

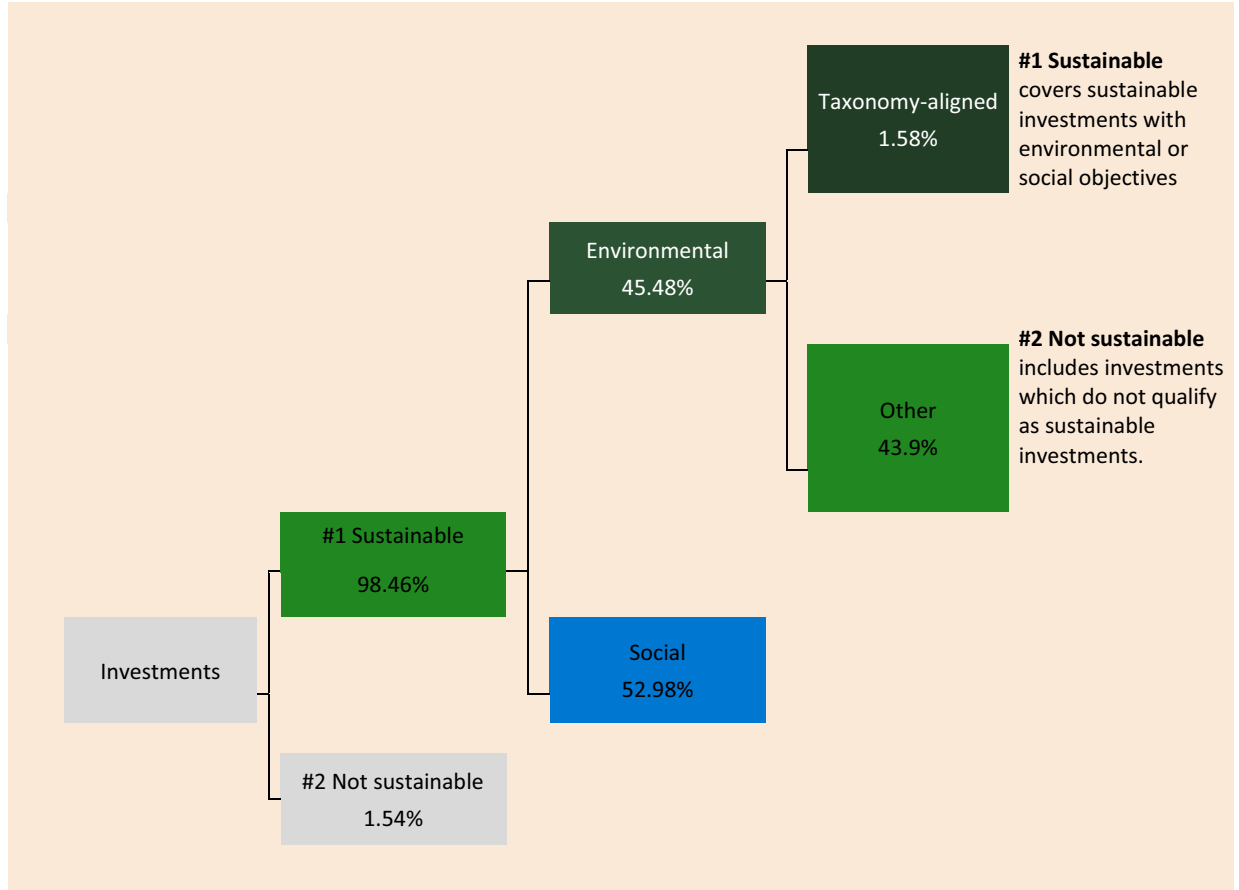

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Publishing activities	23.83%
Manufacture of computer, electronic and optical products	13.06%
Manufacture of machinery and equipment n.e.c.	12.43%
Other manufacturing	6.78%
Manufacture of chemicals and chemical products	6.06%
Manufacture of electrical equipment	4.42%
Electricity, gas, steam and air conditioning supply	3.45%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.44%
Information service activities	3.37%
Insurance, reinsurance and pension funding, except compulsory social security	3.02%
Waste collection, treatment and disposal activities, materials recovery	2.41%

Other	2.4%
Activities auxiliary to financial services and insurance activities	2.39%
Architectural and engineering activities, technical testing and analysis	2.1%
Computer programming, consultancy and related activities	1.84%
Retail trade, except of motor vehicles and motorcycles	1.7%
Legal and accounting activities	1.62%
Other personal service activities	1.16%
Manufacture of paper and paper products	0.99%
Financial service activities, except insurance and pension funding	0.9%
Real estate activities	0.87%
Manufacture of rubber and plastic products	0.79%
Repair and installation of machinery and equipment	0.71%
Construction of buildings	0.27%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	1.58%	0.00%	0.00%	0.00%
CapEx-based	3.89%	0.24%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 43.9% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 52.98 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 1.54% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product’s investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Robotech (the “Financial Product”) **Legal Entity Identifier:** 213800CU3X4UQM7PY924

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> YES	<input checked="" type="checkbox"/> <input type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 81 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human rights violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	59.49 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	128.72 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	83.33 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	60.13 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	160.87 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	98.7 %
Carbon intensity	2023	79.52 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	173.19 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	97.24 %
Water Intensity	2023	278.44 Thousands of cubic meters for corporates	5549.86 Thousands of cubic meters for corporates	97.24 %
Carbon intensity	2022	95.78 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	238.18 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	97.24 %
Water intensity	2022	472.75 Thousands of cubic meters for corporates	11618.89 Thousands of cubic meters for corporates	97.24 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	37	38

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 1717.031	Scope 1: 99	Scope 1: 100
Ecosystem protection & Deforestation policy			Scope 2: 3004.423	Scope 2: 99	Scope 2: 100
			Scope 3: 272087.25	Scope 3: 83	Scope 3: 84
			Scope 1+2: 4721.455	Scope 1+2: 99	Scope 1+2: 100
			Scope 1+2+3: 276073.5	Scope 1+2+3: 83	Scope 1+2+3: 84
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 6.305	Scope 1+2: 49	Scope 1+2: 50
Ecosystem protection & Deforestation policy			Scope 1+2+3: 371.723	Scope 1+2+3: 83	Scope 1+2+3: 84
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1209.254	Scope 1+2+3: 83	Scope 1+2+3: 84
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	0.0	99	100
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 53.45	Energy Consumption: 98 Energy Production: 0	Energy Consumption: 100
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	51.03	75	76

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	99	100
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	30.35	99	100
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	37	38

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	7.58%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	5.14%	US
CADENCE DESIGN SYS INC XNGS USD	Publishing activities	3.89%	US
KEYENCE CORP XTKS JPY	Manufacture of machinery and equipment n.e.c.	3.54%	JP
SIEMENS AG-REG XETR EUR	Manufacture of electrical equipment	3.24%	DE
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	3.17%	FR
INTUITIVE SURGICAL INC XNGS USD	Other manufacturing	3.14%	US
TAIWAN SEMICONDUCTOR-SP ADR XNYS USD	Manufacture of machinery and equipment n.e.c.	3.13%	TW
ALPHABET INC-CL C XNGS USD	Information service activities	3.11%	US
AUTODESK INC XNGS USD	Publishing activities	2.96%	US
FANUC CORP XTKS JPY	Manufacture of machinery and equipment n.e.c.	2.95%	JP
DAIFUKU CO LTD XTKS JPY	Manufacture of machinery and equipment n.e.c.	2.88%	JP
MITSUBISHI ELECTRIC CORP XTKS JPY	Manufacture of electrical equipment	2.82%	JP
BROADCOM INC XNGS USD	Manufacture of computer, electronic and optical products	2.77%	US
DEXCOM INC XNGS USD	Other manufacturing	2.32%	US

The portfolio proportions of investments presented above are an average over the reference period.

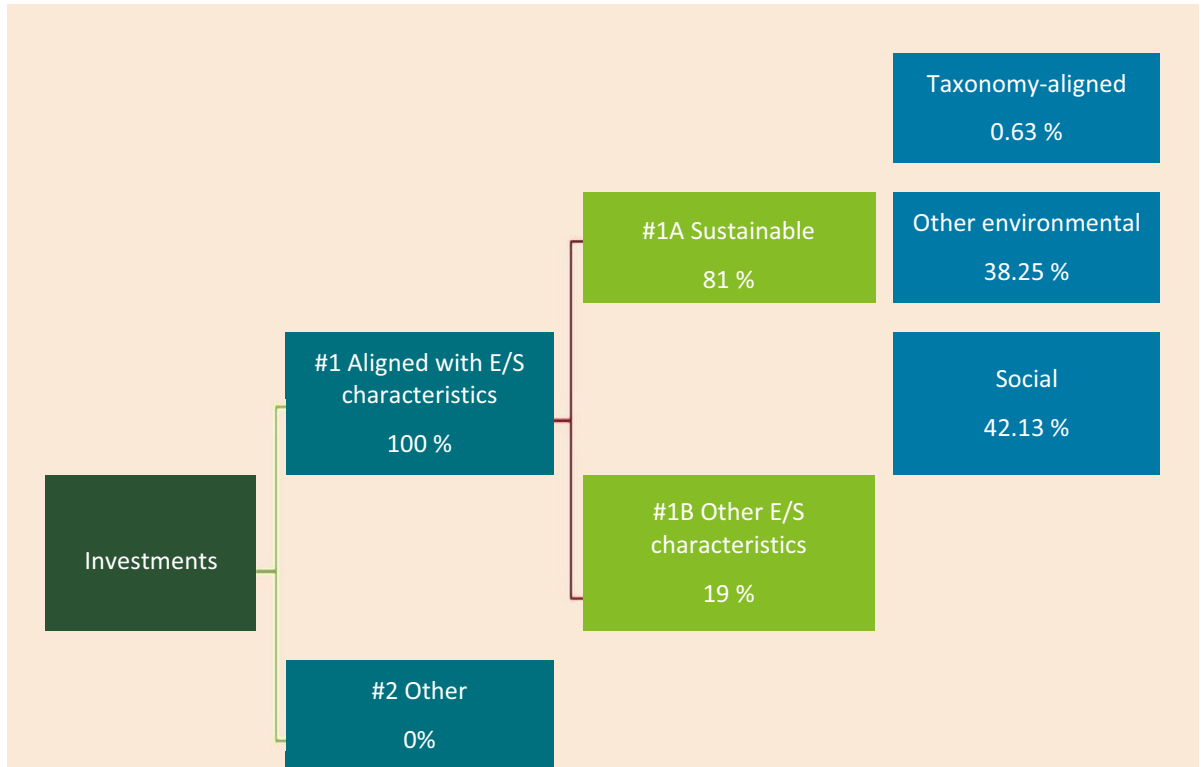

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Manufacture of computer, electronic and optical products	27.86%
Manufacture of machinery and equipment n.e.c.	23.63%
Publishing activities	13.8%
Manufacture of electrical equipment	11.84%
Other manufacturing	9.14%

Retail trade, except of motor vehicles and motorcycles	5.61%
Information service activities	4.64%
Office administrative, office support and other business support activities	1.7%
Other	1.26%
Manufacture of fabricated metal products, except machinery and equipment	0.46%
Manufacture of motor vehicles, trailers and semi-trailers	0.07%
Manufacture of other transport equipment	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.63%	0.59%	0.00%	0.00%
CapEx-based	1.49%	0.81%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 38.25% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 42.13% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

Through the year, the Financial Product has removed its adherence to the French Label ISR as well as its SRI strategy and as described in the relative SFDR Annex of the prospectus of the Financial Product.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product Name: AXA World Funds Selectiv' Infrastructure (the "Financial Product")

Legal Entity Identifier: 2138007UJLE7MEGJLU10

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="checkbox"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 79.27 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Coverage
Women on Board	36.99 % of women on board (for corporates only)	93.03 %
Carbon Intensity	385.13 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	80.68 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... **And compared to previous periods?**

Sustainability KPI Name	Year	Value	Coverage
Women on Board	2024	38.87 % of women on board (for corporates only)	94.19 %
Carbon Intensity	2024	408.61 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	92.44 %
Women on board	2023	38.45 % of women on board	95.36 %
Carbon Intensity	2023	449.08 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.58 %
Women on board	2022	36.84 % of women on board	95.67 %
Carbon Intensity	2022	513.36 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	92.84 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
CONSTELLATION ENERGY XNGS USD	Electricity, gas, steam and air conditioning supply	2.82%	US
NEXTERA ENERGY INC XNYS USD	Electricity, gas, steam and air conditioning supply	2.8%	US
TRANSURBAN GROUP XASX AUD	Warehousing and support activities for transportation	2.45%	AU
UNION PACIFIC CORP XNYS USD	Land transport and transport via pipelines	2.33%	US
ENEL SPA MTAA EUR	Electricity, gas, steam and air conditioning supply	2.18%	IT
KINDER MORGAN INC XNYS USD	Land transport and transport via pipelines	1.86%	US
AMERICAN TOWER CORP XNYS USD	Real estate activities	1.85%	US
CHENIERE ENERGY INC XNYS USD	Manufacture of coke and refined petroleum products	1.82%	US
AENA SME SA XMAD EUR	Warehousing and support activities for transportation	1.78%	ES
SEMPRA XNYS USD	Electricity, gas, steam and air conditioning supply	1.62%	US
EQUINIX INC XNGS USD	Real estate activities	1.62%	US
EXELON CORP XNGS USD	Electricity, gas, steam and air conditioning supply	1.58%	US
EVERSOURCE ENERGY XNYS USD	Electricity, gas, steam and air conditioning supply	1.47%	US
NATIONAL GRID PLC XLON GBP	Electricity, gas, steam and air conditioning supply	1.44%	GB
VINCI SA XPAR EUR	Civil engineering	1.41%	FR

The portfolio proportions of investments presented above are an average over the reference period.

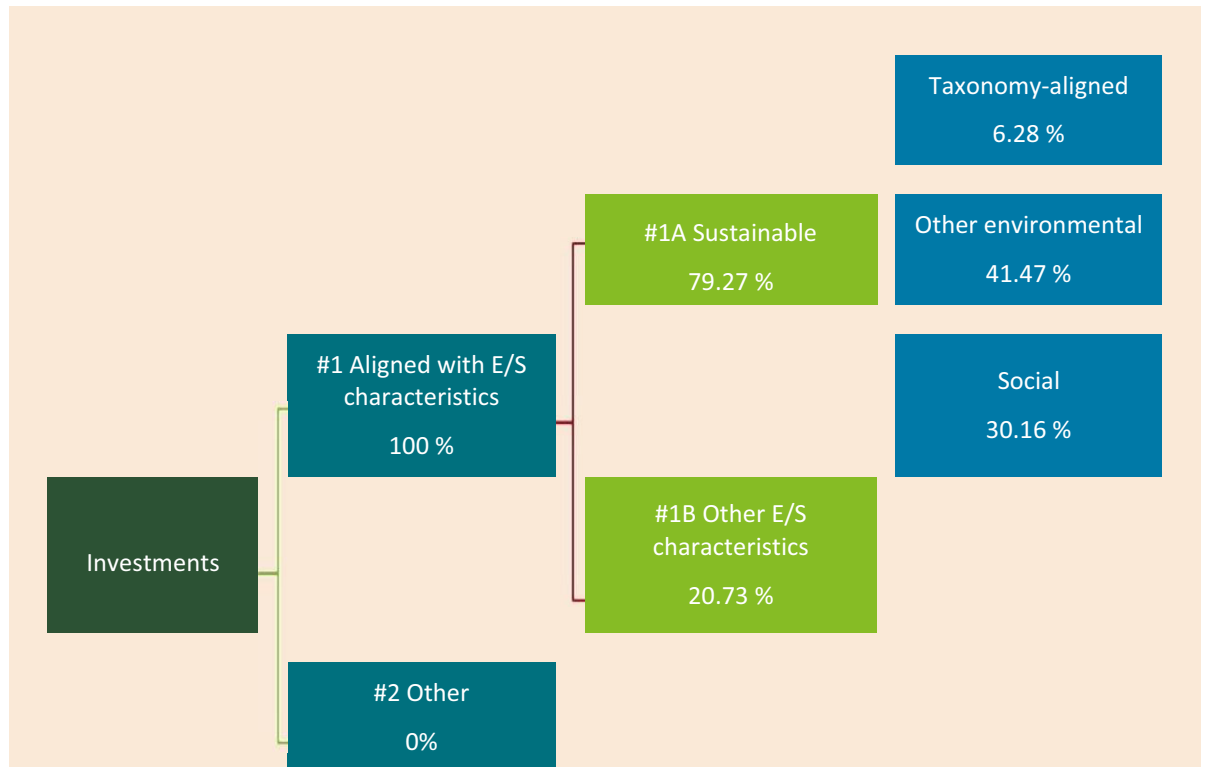

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Electricity, gas, steam and air conditioning supply	42.35%
Real estate activities	17.35%
Land transport and transport via pipelines	14.84%
Warehousing and support activities for transportation	10.45%
Civil engineering	4.79%

Water collection, treatment and supply	3.84%
Manufacture of coke and refined petroleum products	1.82%
Other	1.46%
Programming and broadcasting activities	1.11%
Activities auxiliary to financial services and insurance activities	0.97%
Telecommunications	0.66%
Construction of buildings	0.26%
Public administration and defence, compulsory social security	0.09%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	6.28%	10.43%	0.00%	0.00%
CapEx-based	11.24%	14.69%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 41.47% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 30.16% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity related instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and/or for diversification and/or hedging purposes.

Environmental or social safeguards are applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Social (the “Financial Product”)

Legal Entity Identifier: 213800Z5DWFODAPKIC63

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> YES	<input type="checkbox"/> <input type="checkbox"/> NO
<input checked="" type="checkbox"/> It made sustainable investments with an environmental objective: 32.24%	<input type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
<input checked="" type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input checked="" type="checkbox"/> It made sustainable investments with a social objective: 65.62%	<input type="checkbox"/> with a social objective
	<input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Financial Product has met its sustainable investment objective for the reference period by investing in companies considering their:

- Social Product & Services score
- Women on Board

The financial product has met its sustainable investment objectives by investing in companies assessed as sustainable through the following dimension:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainability indicators perform?**

During the reference period, the attainment of the sustainable objective of the Financial Product has been measured with the sustainability indicators mentioned below:

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

Sustainability KPI Name	Value	Benchmark	Coverage
Social Product & Services score	1.46 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	0.58 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	91,66 %
Women on Board	35,83 % of women on board (for corporates only)	34,20 % of women on board (for corporates only)	99,75%

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... and compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Social Product & Services score	2024	1.56 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	0.64 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	100 %
Women on Board	2024	37.46 % of women on board (for corporates only)	33.99 % of women on board (for corporates only)	100 %
Social Product & Services score	2023	3.49 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))		
Social Product & Services score	2022	3.51 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	0.96 / 10 (SDG scores range from -10 (significant negative impact) to +10 (significant positive impact))	89.76 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The application of the Do No Significant Harm Principle for the sustainable investments the Financial Product made means that the following companies cannot qualify as sustainable if they met any of the criteria listed below1:

- The issuer causes harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer is in AXA IM’s sectorial and ESG standards ban lists (as described below), which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer has a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology. The ESG score is based on ESG scoring from external data provider as primary inputs assessing data points across Environment, Social and Governance (ESG) dimensions. AXA IM analysts can complement with a fundamental and documented ESG analysis in case of lack of coverage or disagreement on the ESG rating provided that it is approved by AXA IM dedicated internal governance body.

Indicators for principal adverse impacts on sustainability factors were considered, including through the application of AXA IM’s exclusion and stewardship policies.

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM Sectorial policies and AXA IM ESG standards and (ii) exclusion criteria for Climate Transition Benchmarks (CTB), as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(c) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Where relevant, Stewardship policies are an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors.

Voting at general meetings is also an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 1168.991 Scope 2: 401.281 Scope 3: 21042.219 Scope 1+2: 1570.272 Scope 1+2+3: 22543.889	Scope 1: 98 Scope 2: 98 Scope 3: 85 Scope 1+2: 98 Scope 1+2+3: 85	Scope 1: 100 Scope 2: 100 Scope 3: 86 Scope 1+2: 100 Scope 1+2+3: 86

<ul style="list-style-type: none"> • AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations • Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A
---	---	--	-----	--	-----

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM relies on an external provider’s screening framework and excludes any companies that have been assessed as “non-compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators as presented below:

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 3: GHG intensity of investee companies
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity
Controversial weapons policy	PAI 14: Exposure to controversial weapons

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of our exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark. The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund invest in companies that are deemed impactful through the implementation of an Impact analysis.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 8, 9, 10, 11 and 14	PAI indicators 3, 5, 6, 12 and 13

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	4.21%	US
MICROSOFT CORP XNGS USD	Publishing activities	4.11%	US
CADENCE DESIGN SYS INC XNGS USD	Publishing activities	3.42%	US
SAP SE XETR EUR	Publishing activities	3.22%	DE
XYLEM INC XNYS USD	Manufacture of machinery and equipment n.e.c.	3.11%	US
INTUIT INC XNGS USD	Publishing activities	3.09%	US
STRYKER CORP XNYS USD	Other manufacturing	3.07%	US
MUENCHENER RUECKVER AG-REG XETR EUR	Insurance, reinsurance and pension funding, except compulsory social security	3.04%	DE
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	3.03%	US
PALO ALTO NETWORKS INC XNGS USD	Publishing activities	2.92%	US
ELI LILLY & CO XNYS USD	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.91%	US
ECOLAB INC XNYS USD	Manufacture of chemicals and chemical products	2.8%	US
VEEVA SYSTEMS INC-CLASS A XNYS USD	Publishing activities	2.73%	US
THERMO FISHER SCIENTIFIC INC XNYS USD	Manufacture of computer, electronic and optical products	2.72%	US
PLANET FITNESS INC - CL A XNYS USD	Sports activities and amusement and recreation activities	2.69%	US

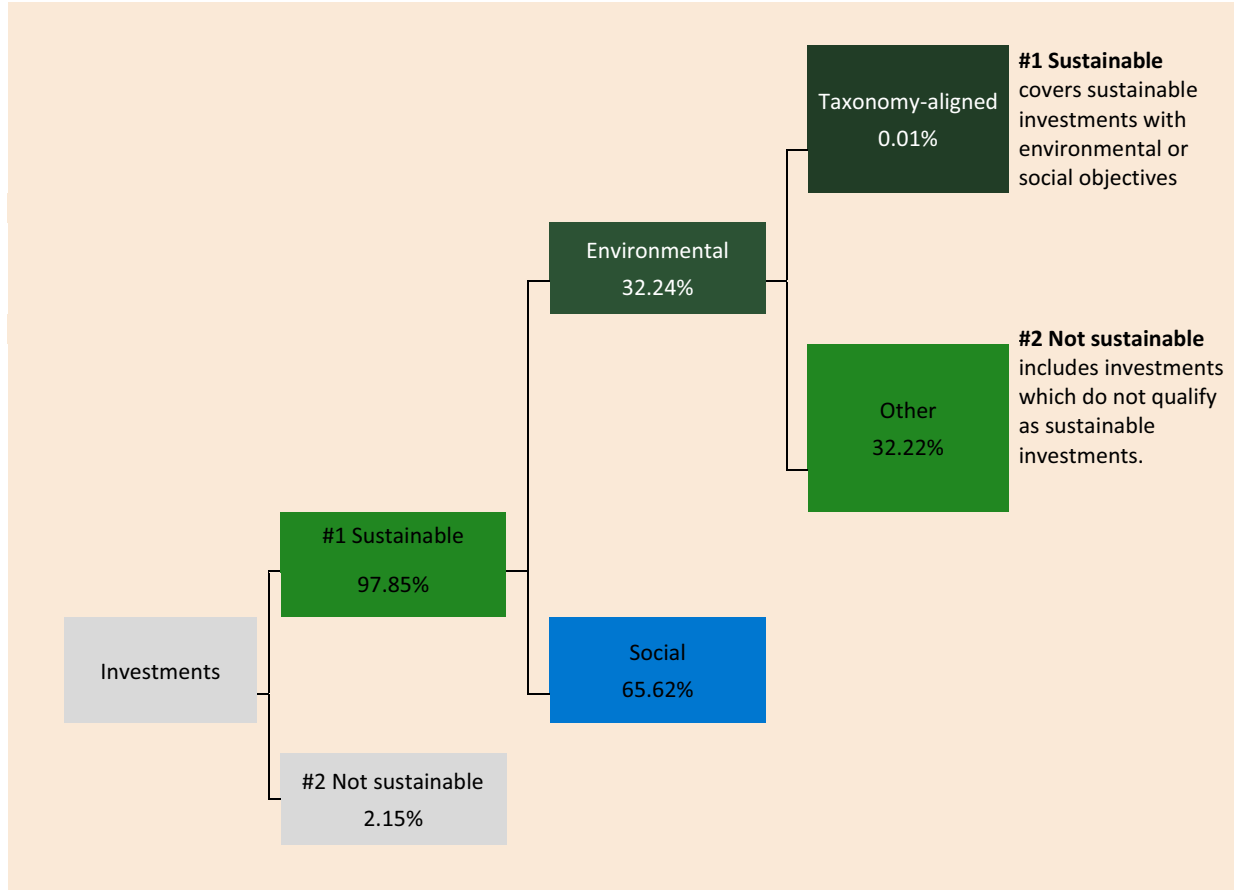

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Publishing activities	29.88%
Manufacture of computer, electronic and optical products	13.48%
Other manufacturing	9.25%
Manufacture of chemicals and chemical products	6.3%
Manufacture of machinery and equipment n.e.c.	4.72%
Insurance, reinsurance and pension funding, except compulsory social security	4.4%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.43%
Activities auxiliary to financial services and insurance activities	3.03%
Sports activities and amusement and recreation activities	2.69%
Waste collection, treatment and disposal activities, materials recovery	2.64%
Retail trade, except of motor vehicles and motorcycles	2.45%

Manufacture of fabricated metal products, except machinery and equipment	2.26%
Other	2.12%
Repair and installation of machinery and equipment	1.93%
Manufacture of paper and paper products	1.89%
Education	1.88%
Legal and accounting activities	1.74%
Information service activities	1.64%
Financial service activities, except insurance and pension funding	1.22%
Wholesale trade, except of motor vehicles and motorcycles	1.15%
Food and beverage service activities	1.08%
Architectural and engineering activities, technical testing and analysis	0.83%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas

In nuclear energy

No

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objectives -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

The Taxonomy alignment of the Financial Product has been provided by an external data provider and has been consolidated to the portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

- **What was the share of investments made in transitional and enabling activities?**
The Financial Product has invested 0 % of its Net Asset Value in transitional activities and 0 % in enabling activities
- **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.01%	0.05%	0.00%	0.00%
CapEx-based	0.16%	0.21%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 32.22% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 65.62 % of sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

Investments included under “not sustainable” represented 2.15% of the Net Asset Value of the product.

The “not sustainable” assets may have consisted in, as defined in the precontractual annex:

- derivatives used in hedging strategies or used for liquidity management purpose and,
- cash and cash equivalent investments (being bank deposit, eligible money market instruments and money market funds) used for managing the liquidity of the Financial Product

Environmental or social safeguards are applied and assessed on all “Not Sustainable” assets except on (i) non single name derivatives and (ii) on cash and cash equivalent investments described above.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product’s investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Subordinated Bonds (the "Financial Product") **Legal Entity Identifier:** 213800XXY9T8Y17BE792

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 61.12 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Coverage
ESG Score	7.66 / 10	

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... And compared to previous periods?

Not applicable.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.

b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

SDG no significantly negative score	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	41.39	81	83
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	9	9

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 1321.427	Scope 1: 94	Scope 1: 96
Ecosystem protection & Deforestation policy			Scope 2: 177.523	Scope 2: 94	Scope 2: 96
			Scope 3: 16281.354	Scope 3: 85	Scope 3: 88
			Scope 1+2: 1498.95	Scope 1+2: 94	Scope 1+2: 96
			Scope 1+2+3: 17778.346	Scope 1+2+3: 85	Scope 1+2+3: 88
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 43.195	Scope 1+2: 37	Scope 1+2: 38
Ecosystem protection & Deforestation policy			Scope 1+2+3: 584.141	Scope 1+2+3: 85	Scope 1+2+3: 88
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 2084.523	Scope 1+2+3: 76	Scope 1+2+3: 78

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
Portfolio 108275 EUR SET SSX	Other	2.51%	N/A
CRELAN 5.375% Var - 30/04/2035 Call	Financial service activities, except insurance and pension funding	2.16%	BE
FRPTT 5% Var - 16/04/2031 Perp	Postal and courier activities	2.07%	FR
ENIIM 4.875% Var - 21/01/2034 Perp	Manufacture of coke and refined petroleum products	2.06%	IT
CMZB 8.625% Var - 28/02/2033 Call	Financial service activities, except insurance and pension funding	1.71%	DE
MACIFS 3.5% Var - 21/12/2028 Perp	Insurance, reinsurance and pension funding, except compulsory social security	1.57%	FR

BACR 4.616% Var - 26/03/2037 Call	Financial service activities, except insurance and pension funding	1.4%	GB
BFCM 4.375% - 11/01/2034	Financial service activities, except insurance and pension funding	1.39%	FR

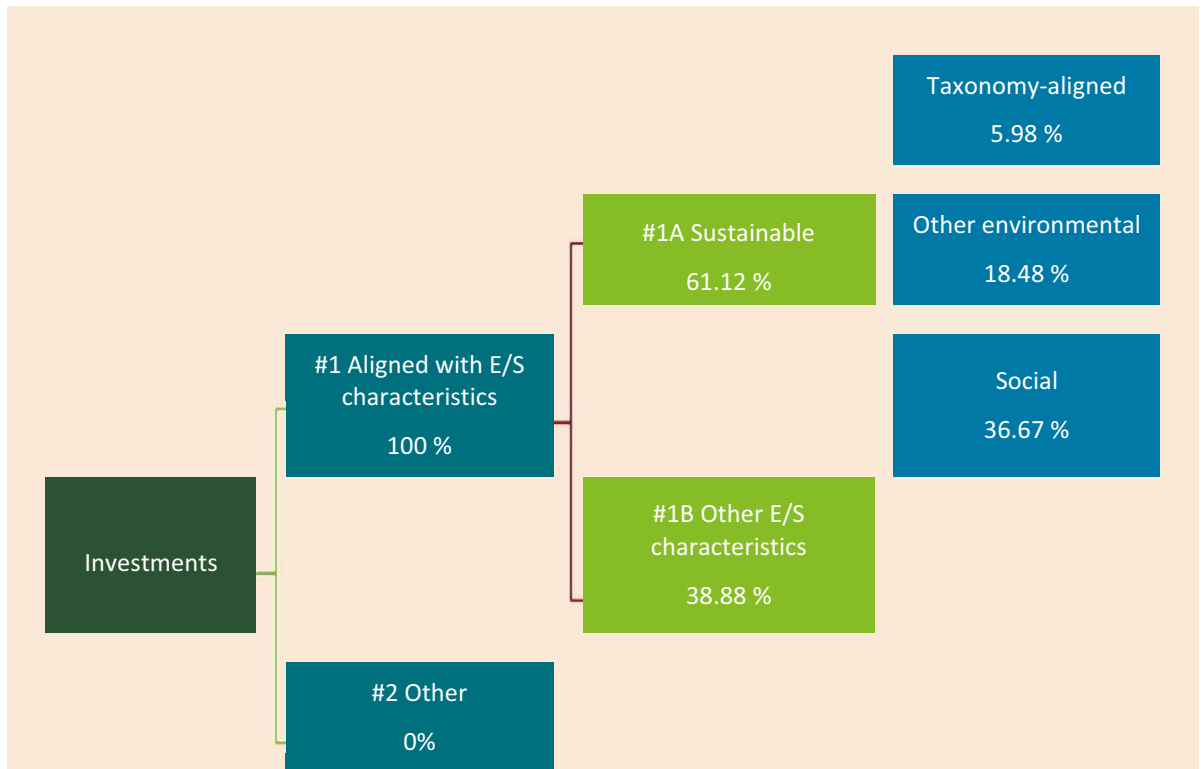

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	52.59%
Insurance, reinsurance and pension funding, except compulsory social security	16.51%
Electricity, gas, steam and air conditioning supply	10.29%
Manufacture of coke and refined petroleum products	4.93%
Telecommunications	3.38%

Other	2.96%
Real estate activities	2.44%
Postal and courier activities	2.07%
Manufacture of chemicals and chemical products	1.38%
Manufacture of motor vehicles, trailers and semi-trailers	1.28%
Water collection, treatment and supply	1.15%
Activities auxiliary to financial services and insurance activities	1.03%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

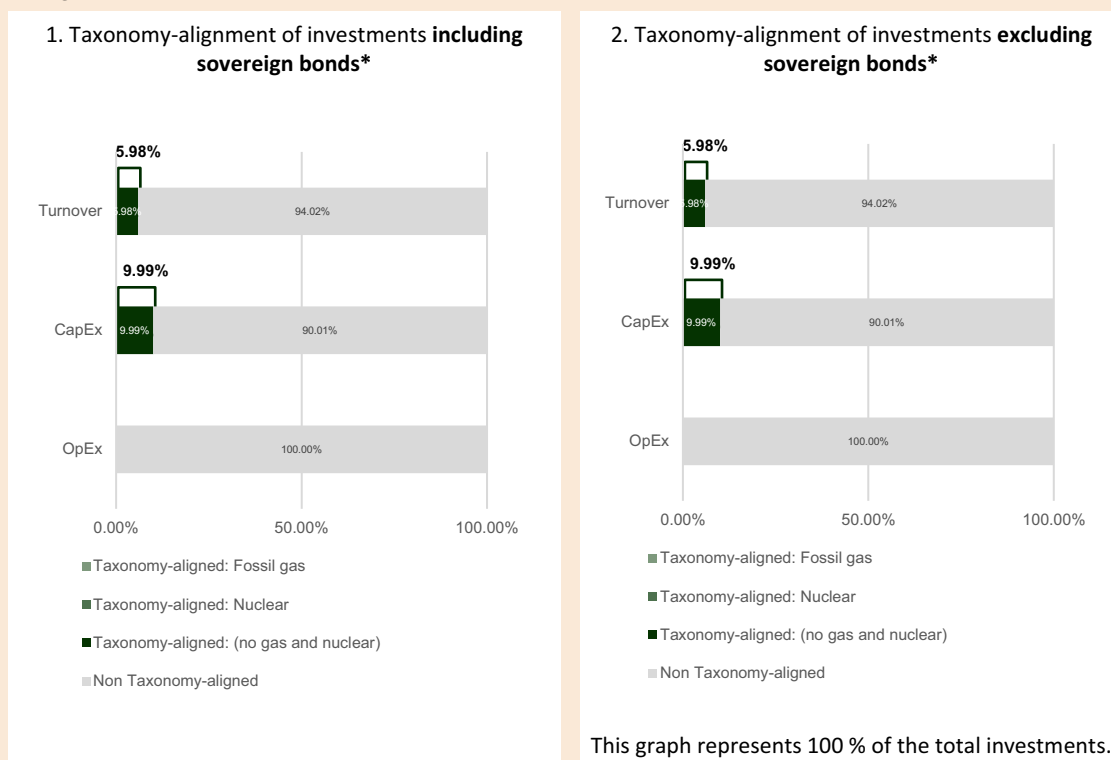

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 18.48% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

What was the share of socially sustainable investments?

During the reference period, the Financial Product invested in 36.67% of sustainable investments with a social objective.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The "other" assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and

that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Sustainable Equity QI (the “Financial Product”) **Legal Entity Identifier:** 21380043259EJLUQF79

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 68.7 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Women on Board

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

During the reference period, the Financial Product has applied a ESG Score Upgrade Approach approach on its investment universe, according to which the ESG scoring of the Financial Product has been higher than the scoring of the investment universe after removing at least the 20% worst ESG Scores, on a weighted average basis.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	58.53 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	110.87 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	83.26 %
Women on Board	38.23 % of women on board (for corporates only)	35.85 % of women on board (for corporates only)	99.62 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● ... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	73.68 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	131.38 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	99.87 %
Women on Board	2024	37.35 % of women on board (for corporates only)	35.78 % of women on board (for corporates only)	99.56 %
Carbon intensity (Scope 1+2)	2023	71.86 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign		
Water Intensity	2023	2899.64 Thousands of cubic meters for corporates	0 Thousands of cubic meters for corporates	99.95 %
Carbon intensity	2022	128.15 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	225.84 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.89 %
Water intensity	2022	7835.77 Thousands of cubic meters for corporates	12712.05 Thousands of cubic meters for corporates	99.89 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy

alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Delegated Regulation of the Benchmark Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 9673.631 Scope 2: 8174.436 Scope 3: 371832.313 Scope 1+2: 17848.066 Scope 1+2+3: 387271.438	Scope 1: 99 Scope 2: 99 Scope 3: 83 Scope 1+2: 99 Scope 1+2+3: 83	Scope 1: 100 Scope 2: 100 Scope 3: 84 Scope 1+2: 100 Scope 1+2+3: 84

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	0.032	29	29
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	1.91	48	48

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0%	99	100
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	50.1 %	99	100
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	12.65%	97	98
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	37.89	99	100
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved	0	26	26

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

		in the manufacture or selling of controversial weapons (% of AuM)			
--	--	---	--	--	--

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 3: GHG intensity of investee companies
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector
Climate Risk policy (engagement only)	
Ecosystem protection & Deforestation policy	PAI 5: Share of non-renewable energy consumption and production
ESG standard policy / violation of international norms and standards	
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 7: Activities negatively affecting biodiversity-sensitive areas
Controversial weapons policy	
	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises
	PAI 13: Board Gender diversity
	PAI 14: Exposure to controversial weapons

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator
--------------------------	---------------

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations
- Compliance black-list based on international and EU sanctions

PAI 16: Sovereign Investee countries subject to social violations

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of AXA IM's exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark. The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund tends to invest in companies with a strong ESG profile through the implementation of an SRI strategy.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for

which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	4.52%	US
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	4.5%	US
MICROSOFT CORP XNGS USD	Publishing activities	4.23%	US
ALPHABET INC-CL A XNGS USD	Information service activities	2.77%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	1.89%	US
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	1.5%	US
COSTCO WHOLESALE CORP XNGS USD	Retail trade, except of motor vehicles and motorcycles	1.21%	US
BROADCOM INC XNGS USD	Manufacture of computer, electronic and optical products	1.11%	US
MASTERCARD INC - A XNYS USD	Activities auxiliary to financial services and insurance activities	1.09%	US

PROCTER & GAMBLE CO/THE XNYS USD	Manufacture of paper and paper products	1.07%	US
ROYAL BANK OF CANADA XTSE CAD	Financial service activities, except insurance and pension funding	1.07%	CA
PEPSICO INC XNGS USD	Manufacture of beverages	1.04%	US
MCDONALD'S CORP XNYS USD	Food and beverage service activities	0.91%	US
TESLA INC XNGS USD	Manufacture of motor vehicles, trailers and semi-trailers	0.89%	US

The portfolio proportions of investments presented above are an average over the reference period.

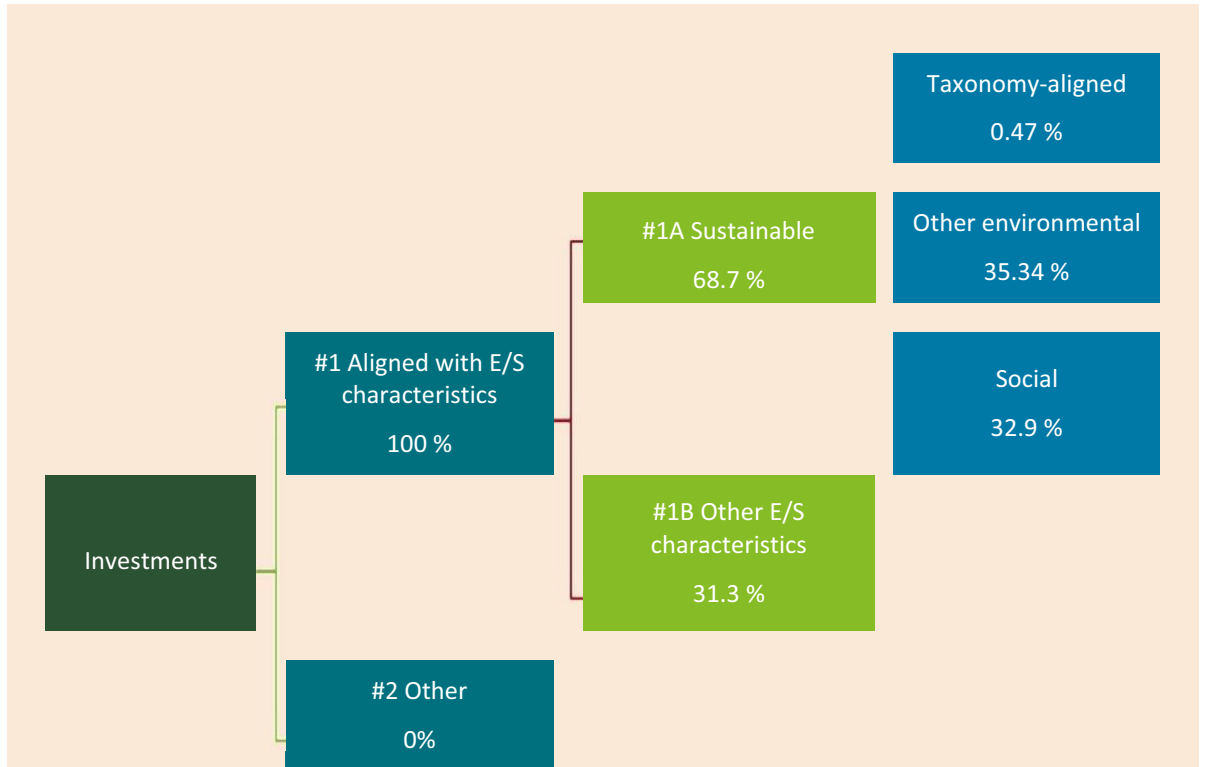

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Manufacture of computer, electronic and optical products	14.42%
Insurance, reinsurance and pension funding, except compulsory social security	8.93%
Retail trade, except of motor vehicles and motorcycles	8.79%
Publishing activities	7.14%
Activities auxiliary to financial services and insurance activities	6.82%

Financial service activities, except insurance and pension funding	6.35%
Information service activities	5.83%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.68%
Telecommunications	3.18%
Manufacture of paper and paper products	3.14%
Manufacture of machinery and equipment n.e.c.	3.13%
Manufacture of beverages	2.64%
Manufacture of chemicals and chemical products	2.52%
Electricity, gas, steam and air conditioning supply	2.36%
Wholesale trade, except of motor vehicles and motorcycles	2.07%
Legal and accounting activities	1.98%
Computer programming, consultancy and related activities	1.64%
Manufacture of food products	1.64%
Food and beverage service activities	1.44%
Manufacture of motor vehicles, trailers and semi-trailers	1.2%
Manufacture of electrical equipment	1.13%
Other manufacturing	0.9%
Real estate activities	0.86%
Other	0.74%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.62%
Scientific research and development	0.56%
Land transport and transport via pipelines	0.53%
Waste collection, treatment and disposal activities, materials recovery	0.47%
Other personal service activities	0.44%
Security and investigation activities	0.44%
Gambling and betting activities	0.38%
Manufacture of other transport equipment	0.37%
Mining of metal ores	0.36%
Human health activities	0.36%
Architectural and engineering activities, technical testing and analysis	0.35%
Warehousing and support activities for transportation	0.34%
Water collection, treatment and supply	0.31%
Office administrative, office support and other business support activities	0.31%
Construction of buildings	0.3%
Advertising and market research	0.25%
Manufacture of wearing apparel	0.23%
Manufacture of other non-metallic mineral products	0.23%
Accommodation	0.18%
Manufacture of rubber and plastic products	0.18%
Postal and courier activities	0.11%
Sports activities and amusement and recreation activities	0.06%
Civil engineering	0.04%
Manufacture of leather and related products	0.03%
Manufacture of fabricated metal products, except machinery and equipment	0.02%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.47%	0.64%	0.00%	0.00%
CapEx-based	1.53%	1.27%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 35.34% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 32.9% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product's investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Sustainable Eurozone Equity (the “Financial Product”) **Legal Entity Identifier:** 213800EVJM9C68HYWU61

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 95.01 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity
- Women on Board

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has applied a socially responsible investment selectivity approach Best-in-Universe on the investment universe during the reference period. The selectivity approach has reduced the investment universe at least by 20% based on a combination of AXA IM's Sectorial Exclusion and ESG Standards policies and their E Score to the exception of cash held on an ancillary basis and Solidarity Assets.

In addition, the investment strategy has outperformed its benchmark or investment universe on at least two ESG Key Performance Indicator that are Carbon Intensity and Women on Board during the reference period.

During the reference period, the following minimum coverage rates have been applied with the Financial Product portfolio (expressed as a percentage of at least % of the net assets, excluding bonds and other debt securities issued by public issuers, cash held on an ancillary basis and Solidarity Assets): i) 90% for the ESG analysis, ii) 90% for the Carbon Intensity indicator and iii) 70% for the Women on Board indicator.

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	91.18 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	114.67 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	83.08 %
Women on Board	43.98 % of women on board (for corporates only)	42 % of women on board (for corporates only)	99.33 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● ... And compared to previous periods?

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	122.41 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	136.64 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	98.38 %
Women on Board	2024	44.41 % of women on board (for corporates only)	42.49 % of women on board (for corporates only)	98.57 %
Carbon intensity	2023	147.37 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	150.66 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.41 %
Women on Board	2023	43.45 % of women on board	41.98 % of women on board	97.54 %
Carbon intensity	2022	156.03 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	240.09 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	98.7 %
Women on Board	2022	43.78 % of women on board	40.77 % of women on board	97.93 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities ("Operations"). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the "products and services" offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer's operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer's Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer's "Operations" is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°C world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards and (ii) those applicable to Paris-aligned Benchmarks (PAB), as defined in the Delegated Regulation of the Benchmark Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g) (as described in the SFDR precontractual annex that have been applied bindingly at all times by the Financial Product), as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

with board gender diversity		expressed as a percentage of all board members (%)			
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	35	35

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 100 Relative number: 100

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 2: Carbon Footprint
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 3: GHG intensity of investee companies
Ecosystem protection & Deforestation policy	
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity
Controversial weapons policy	PAI 14: Exposure to controversial weapons

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

For their computation, indicators and coverage are weighted over the value of each instrument

Beyond the application of AXA IM's exclusion policies, principal adverse impacts (PAIs) are addressed through the outperformance objective on two indicators, whereby the fund seeks to improve its performance relative to its benchmark. The fund does not have a specific objective on other indicators, the performance of which evolves over time according to investment decisions. Finally, in addition to applying ESG exclusions and outperforming two indicators, the fund tends to invest in companies with a strong ESG profile through the implementation of an SRI strategy.

PAI used as sustainable indicator are used to set a "level" which has to be overperformed. Pms then use this level to frame their stock picking and to build the portfolio.

As a PAB fund, the Financial Product applies additional exclusions as defined in the Benchmark Regulation Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g), which also allow to consider PAI indicators 1 to 6, 10, 11 and 14.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment.

The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
ASML HOLDING NV XAMS EUR	Manufacture of machinery and equipment n.e.c.	6.8%	NL
SCHNEIDER ELECTRIC SE XPAR EUR	Manufacture of electrical equipment	4.96%	FR
INTESA SANPAOLO MTA EUR	Financial service activities, except insurance and pension funding	4.96%	IT
ALLIANZ SE-REG XETR EUR	Insurance, reinsurance and pension funding, except compulsory social security	4.38%	DE
IBERDROLA SA XMAD EUR	Electricity, gas, steam and air conditioning supply	4.11%	ES
BANCO BILBAO VIZCAYA ARGENTA XMAD EUR	Financial service activities, except insurance and pension funding	3.54%	ES
PUBLICIS GROUPE XPAR EUR	Advertising and market research	3.32%	FR
FINECOBANK SPA MTA EUR	Financial service activities, except insurance and pension funding	3.28%	IT
LVMH MOET HENNESSY LOUIS VUI XPAR EUR	Manufacture of leather and related products	3.23%	FR
BNP PARIBAS XPAR EUR	Financial service activities, except insurance and pension funding	3.04%	FR
COMPAGNIE DE SAINT GOBAIN XPAR EUR	Manufacture of other non-metallic mineral products	2.77%	FR
INDUSTRIA DE DISENO TEXTIL XMAD EUR	Retail trade, except of motor vehicles and motorcycles	2.68%	ES
AIR LIQUIDE SA XPAR EUR	Manufacture of chemicals and chemical products	2.66%	FR
DEUTSCHE TELEKOM AG-REG XETR EUR	Telecommunications	2.6%	DE
SAP SE XETR EUR	Publishing activities	2.41%	DE

The portfolio proportions of investments presented above are an average over the reference period.

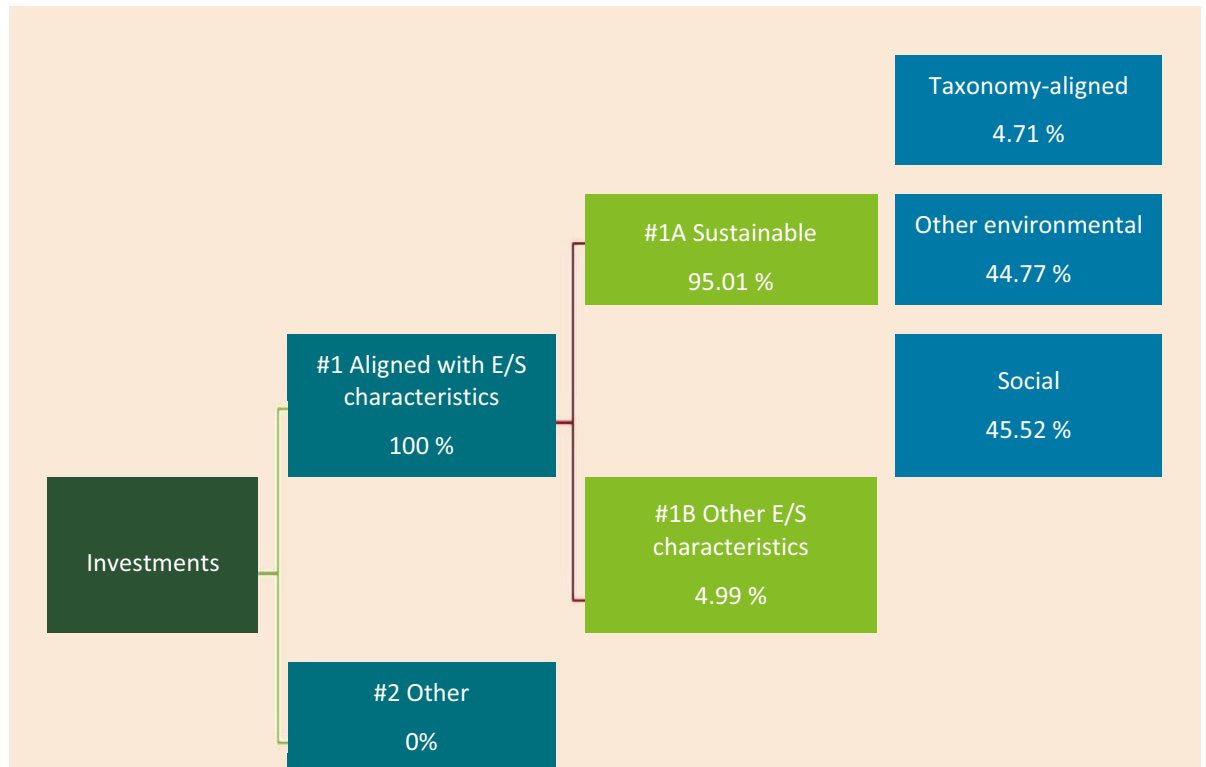

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	20.1%
Manufacture of machinery and equipment n.e.c.	10.43%
Electricity, gas, steam and air conditioning supply	6.58%
Manufacture of chemicals and chemical products	6.45%
Manufacture of electrical equipment	4.96%

Publishing activities	4.75%
Insurance, reinsurance and pension funding, except compulsory social security	4.38%
Retail trade, except of motor vehicles and motorcycles	3.63%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.36%
Telecommunications	3.34%
Advertising and market research	3.32%
Manufacture of leather and related products	3.23%
Civil engineering	2.89%
Manufacture of other non-metallic mineral products	2.77%
Manufacture of fabricated metal products, except machinery and equipment	2.38%
Other manufacturing	2.13%
Architectural and engineering activities, technical testing and analysis	1.87%
Manufacture of beverages	1.83%
Legal and accounting activities	1.63%
Water collection, treatment and supply	1.29%
Manufacture of food products	1.24%
Manufacture of computer, electronic and optical products	1.07%
Travel agency, tour operator reservation service and related activities	1.03%
Scientific research and development	0.99%
Manufacture of rubber and plastic products	0.99%
Computer programming, consultancy and related activities	0.97%
Activities auxiliary to financial services and insurance activities	0.94%
Manufacture of motor vehicles, trailers and semi-trailers	0.83%
Other	0.44%
Food and beverage service activities	0.17%
Manufacture of coke and refined petroleum products	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

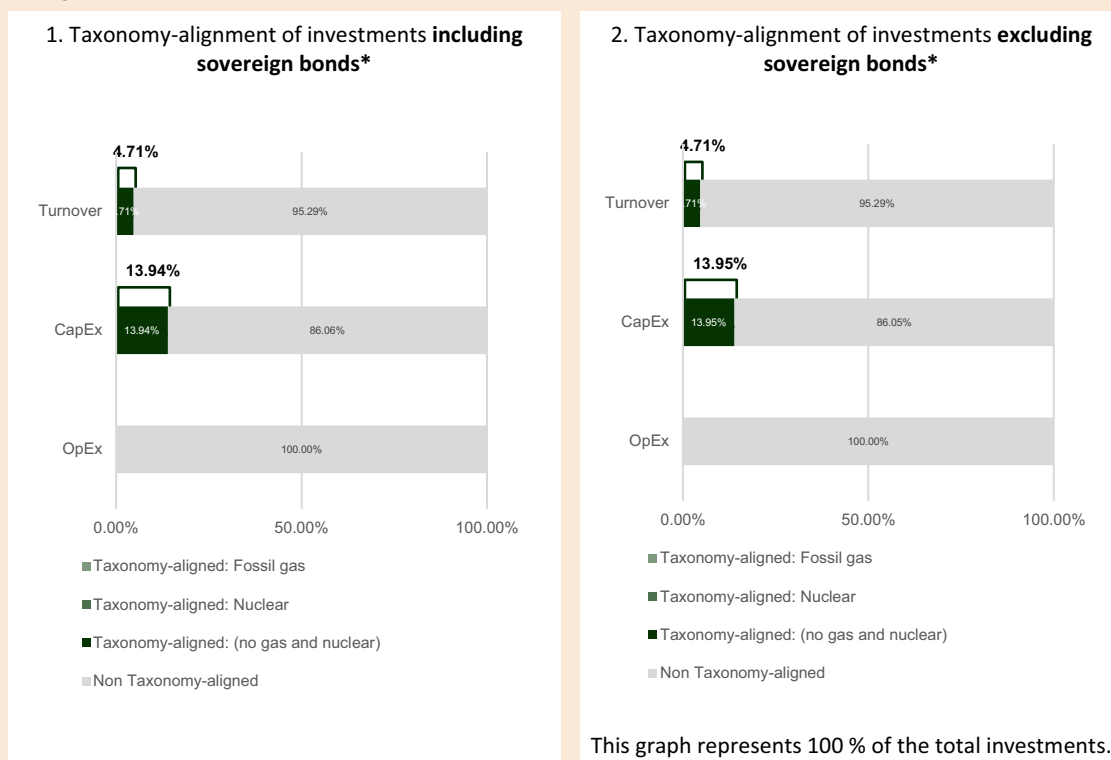

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	4.71%	7.70%	0.00%	0.00%
CapEx-based	13.94%	11.54%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 44.77% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 45.52% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Financial Product has been awarded with the French Label ISR and therefore applied continuously the label’s requirements into its daily management during the reference period. As a consequence of the planned continuous application of the label in 2025, and to align with the Label ISR V3 standards which enter into force on the 1st of January of 2025 for existing products, the Financial Product's investment strategy, in particular the responsible investment strategy, has been adapted end of 2024, as described in the relative SFDR Annex of the prospectus of the Financial Product. Furthermore, a yearly audit is conducted by external auditors to ensure the compliance of the Financial Product with the Label. More details on this label are available under the following link: [Label ISR - Attribution criteria](#)

Through the year, the Financial Product has also reviewed its SRI strategy to apply additional exclusions required for PAB funds as defined in the section related to the EU Paris-aligned Benchmarks in the Delegated Regulation (CDR (EU) 2020/1818) Article 12(1)(a)-(g). More information can be found within AXA IM exclusion policies (AXA IM Climate risks policy in particular) available on AXA IM website under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds Switzerland Equity (the "Financial Product") **Legal Entity Identifier:** 2138001ELXVWPC8ELB48

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="checkbox"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 66.05 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization's (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	90.1 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	121.48 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	80.73 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... **And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	104.3 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	133.59 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	96.26 %
Carbon intensity	2023	125.51 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	135.11 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	99.36 %
Carbon intensity	2022	124.43 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	161.08 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance,

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 1840.574	Scope 1: 95 Scope 2: 95 Scope 3: 86 Scope 1+2: 95 Scope 1+2+3: 86	Scope 1: 96 Scope 2: 96 Scope 3: 88 Scope 1+2: 96 Scope 1+2+3: 88
Ecosystem protection & Deforestation policy			Scope 2: 1439.875

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
ROCHE HOLDING AG-GENUSSCHEIN XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	7.81%	CH
NESTLE SA-REG XSWX CHF	Manufacture of food products	6.67%	CH
JULIUS BAER GROUP LTD XSWX CHF	Activities auxiliary to financial services and insurance activities	5.49%	CH
NOVARTIS AG-REG XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.27%	CH
LONZA GROUP AG-REG XSWX CHF	Human health activities	4.64%	CH
CHOCOLADEFABRIKEN LINDT-PC XSWX CHF	Manufacture of food products	4.42%	CH
UBS GROUP AG-REG XSWX CHF	Activities auxiliary to financial services and insurance activities	4.1%	CH
PSP SWISS PROPERTY AG-REG XSWX CHF	Real estate activities	3.82%	CH
FISCHER (GEORG)-REG XSWX CHF	Manufacture of machinery and equipment n.e.c.	3.62%	CH
VAT GROUP AG XSWX CHF	Manufacture of machinery and equipment n.e.c.	3.61%	CH
SWISSCOM AG-REG XSWX CHF	Telecommunications	3.22%	CH
CIE FINANCIERE RICHEMO-A REG XSWX CHF	Other manufacturing	3.11%	CH
SIKA AG-REG XSWX CHF	Manufacture of other non-metallic mineral products	2.83%	CH
SGS SA-REG XSWX CHF	Legal and accounting activities	2.67%	CH
GALDERMA GROUP AG XSWX CHF	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.66%	CH

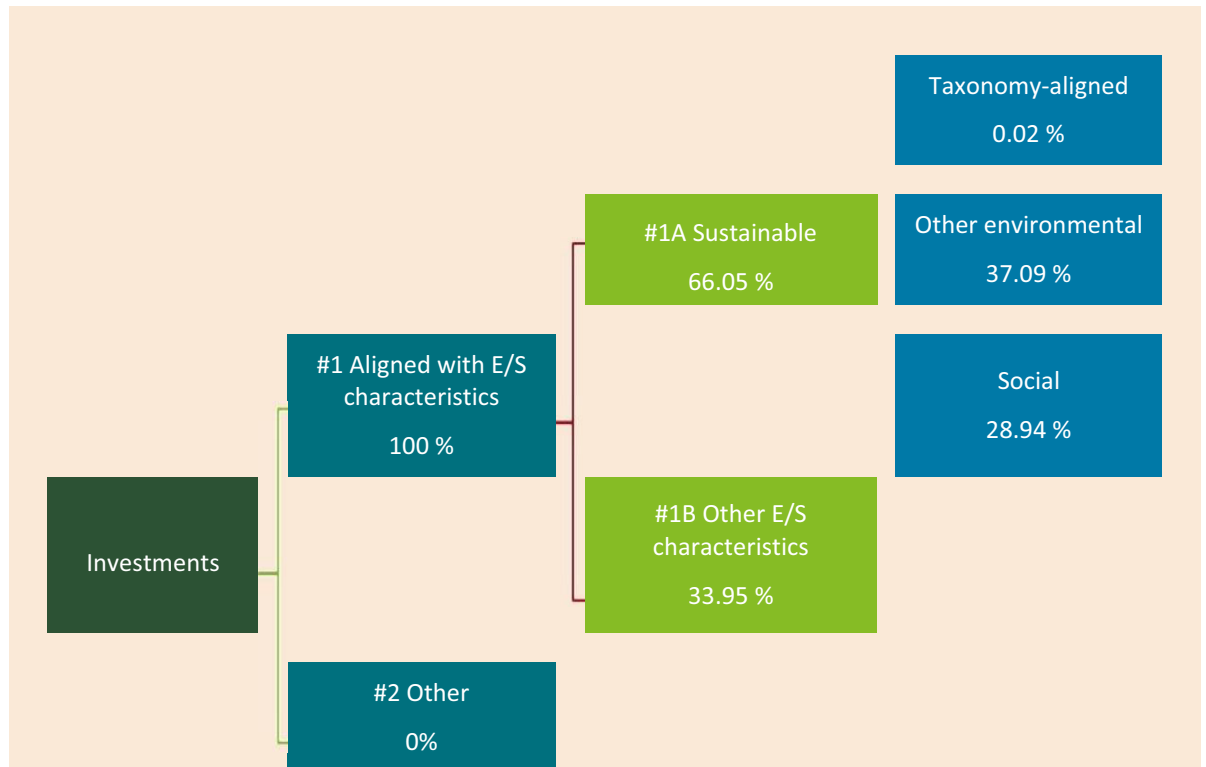

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Manufacture of basic pharmaceutical products and pharmaceutical preparations	19.71%
Manufacture of machinery and equipment n.e.c.	13.37%
Manufacture of food products	12.64%
Activities auxiliary to financial services and insurance activities	10.75%
Other manufacturing	5.71%

Manufacture of computer, electronic and optical products	5.4%
Insurance, reinsurance and pension funding, except compulsory social security	5.2%
Human health activities	4.64%
Real estate activities	3.82%
Telecommunications	3.22%
Manufacture of other non-metallic mineral products	2.97%
Legal and accounting activities	2.67%
Manufacture of paper and paper products	2.61%
Manufacture of fabricated metal products, except machinery and equipment	1.72%
Other	1.7%
Manufacture of chemicals and chemical products	1.63%
Computer programming, consultancy and related activities	0.77%
Employment activities	0.65%
Retail trade, except of motor vehicles and motorcycles	0.49%
Financial service activities, except insurance and pension funding	0.32%
Mining of metal ores	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

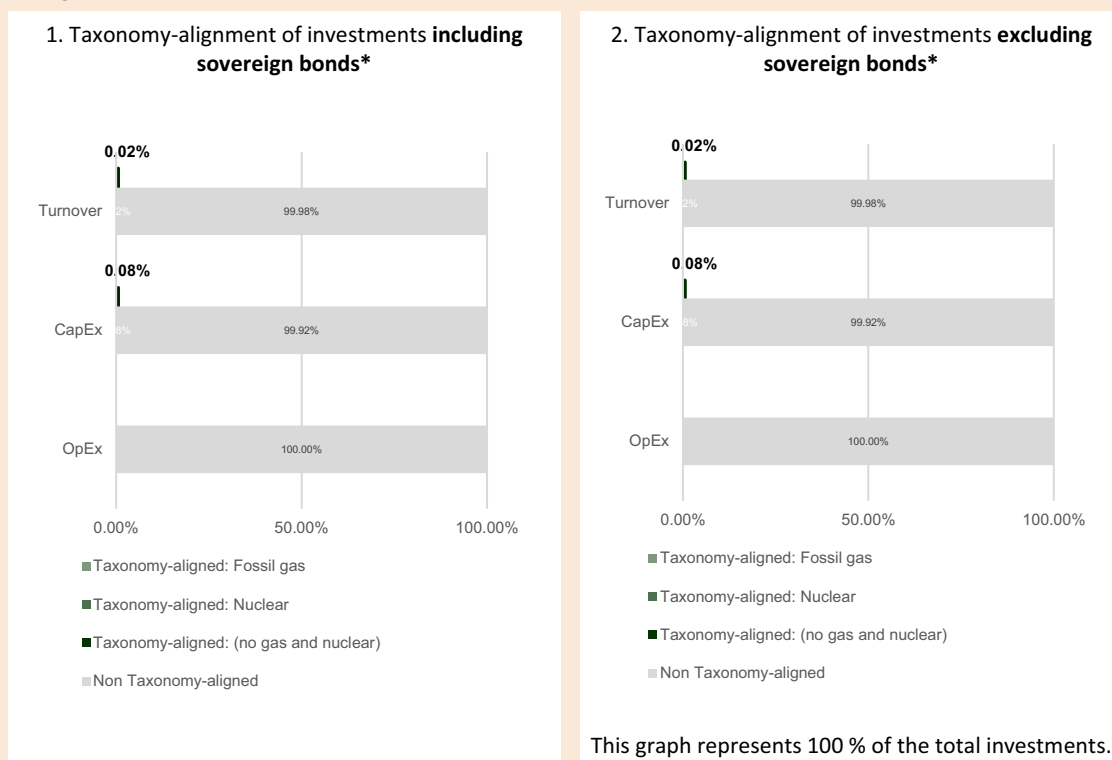

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.02%	0.27%	0.00%	0.00%
CapEx-based	0.08%	0.21%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 37.09% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 28.94% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds UK Equity (the “Financial Product”) **Legal Entity Identifier:** 213800C215XQXI3S8M28

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●○ <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 58.23 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human rights violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Benchmark	Coverage
Carbon Intensity	105.68 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	107.1 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	80.93 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... **And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
Carbon Intensity	2024	115.61 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	122.64 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	95.23 %
Carbon intensity	2023	118.39 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	128.47 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	93.28 %
Carbon intensity	2022	169.5 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	214.79 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	93.15 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance,

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 3198.941	Scope 1: 94 Scope 2: 94 Scope 3: 83 Scope 1+2: 94 Scope 1+2+3: 83	Scope 1: 96 Scope 2: 96 Scope 3: 85 Scope 1+2: 96 Scope 1+2+3: 85
Ecosystem protection & Deforestation policy			Scope 2: 668.008		
Climate Risk policy			Scope 3: 47661.461 Scope 1+2: 3866.95 Scope 1+2+3: 51101.297		
Ecosystem protection & Deforestation policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 40.512 Scope 1+2+3: 519.887	Scope 1+2: 47 Scope 1+2+3: 83	Scope 1+2: 48 Scope 1+2+3: 85
Ecosystem protection & Deforestation policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1036.78	Scope 1+2+3: 83	Scope 1+2+3: 85
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	5.28	94	96
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 55.99	Energy Consumption: 87 Energy Production: 0	Energy Consumption: 89
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	33.6	83	85
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for	Share of investments in investee companies that have been involved in violations of the	0.0%	96	98

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Multinational Enterprises	UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)			
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	42.56	94	96
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	28	28

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
ASTRAZENECA PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.14%	GB
LONDON STOCK EXCHANGE GROUP XLON GBP	Activities auxiliary to financial services and insurance activities	3.53%	GB
UNILEVER PLC XLON GBP	Manufacture of paper and paper products	3.5%	GB
SHELL PLC XLON GBP	Manufacture of coke and refined petroleum products	3.36%	GB
EXPERIAN PLC XLON GBP	Information service activities	3.23%	IE
LLOYDS BANKING GROUP PLC XLON GBP	Financial service activities, except insurance and pension funding	3.03%	GB
PRUDENTIAL PLC XLON GBP	Insurance, reinsurance and pension funding, except compulsory social security	2.9%	HK
STANDARD CHARTERED PLC XLON GBP	Financial service activities, except insurance and pension funding	2.62%	GB
RELX PLC XLON GBP	Legal and accounting activities	2.42%	GB
GSK PLC XLON GBP	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.39%	GB
NATWEST GROUP PLC XLON GBP	Financial service activities, except insurance and pension funding	2.3%	GB
ANTOFAGASTA PLC XLON GBP	Mining of metal ores	2.27%	CL
RENTOKIL INITIAL PLC XLON GBP	Services to buildings and landscape activities	2.21%	GB
WEIR GROUP PLC/THE XLON GBP	Manufacture of machinery and equipment n.e.c.	2.12%	GB
CRANSWICK PLC XLON GBP	Manufacture of food products	2%	GB

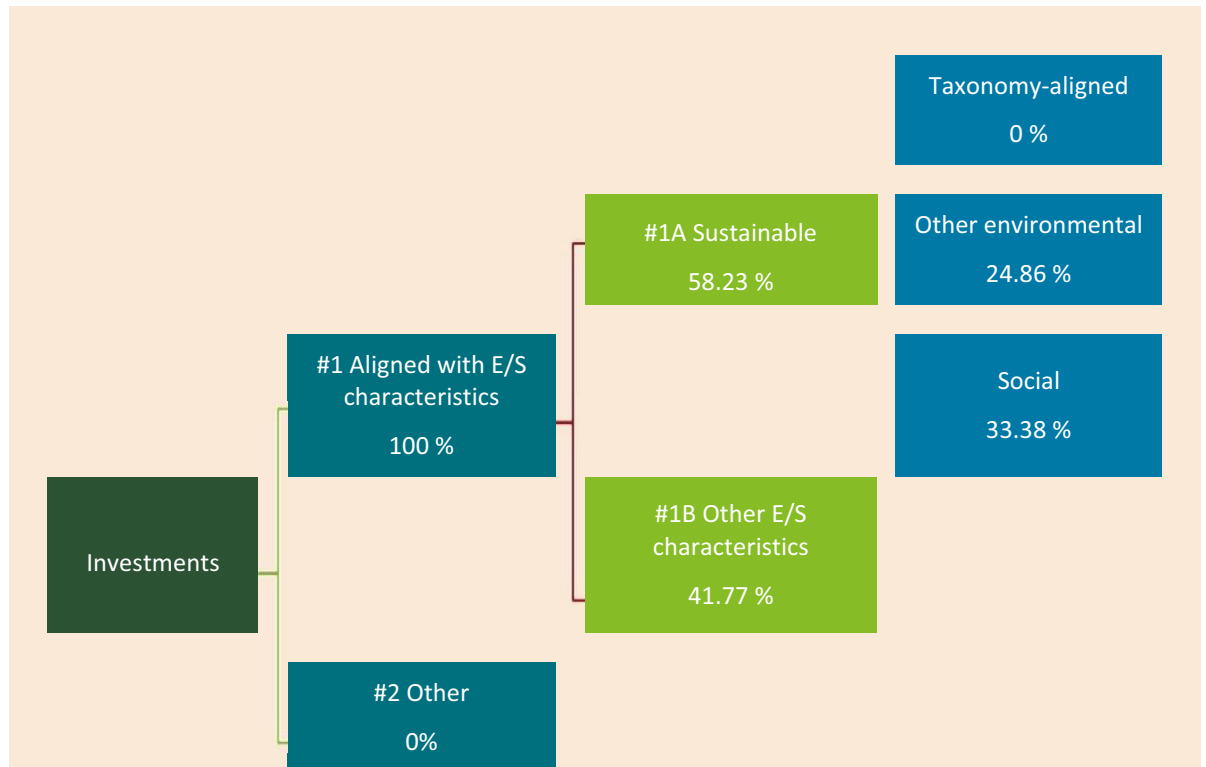

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	9.77%
Information service activities	8.83%
Activities auxiliary to financial services and insurance activities	7.85%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	7.22%
Retail trade, except of motor vehicles and motorcycles	5.96%

Insurance, reinsurance and pension funding, except compulsory social security	5.76%
Manufacture of coke and refined petroleum products	5.29%
Manufacture of machinery and equipment n.e.c.	5.2%
Publishing activities	4.07%
Manufacture of paper and paper products	3.5%
Manufacture of fabricated metal products, except machinery and equipment	3.27%
Real estate activities	2.87%
Computer programming, consultancy and related activities	2.53%
Manufacture of other non-metallic mineral products	2.47%
Legal and accounting activities	2.42%
Mining of metal ores	2.27%
Other	2.22%
Services to buildings and landscape activities	2.21%
Manufacture of food products	2%
Manufacture of textiles	1.72%
Construction of buildings	1.69%
Manufacture of computer, electronic and optical products	1.68%
Advertising and market research	1.34%
Other manufacturing	1.33%
Manufacture of furniture	1.28%
Rental and leasing activities	1.17%
Warehousing and support activities for transportation	1.16%
Sports activities and amusement and recreation activities	1.07%
Manufacture of beverages	0.63%
Activities of head offices, management consultancy activities	0.53%
Manufacture of electrical equipment	0.45%
Manufacture of other transport equipment	0.26%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

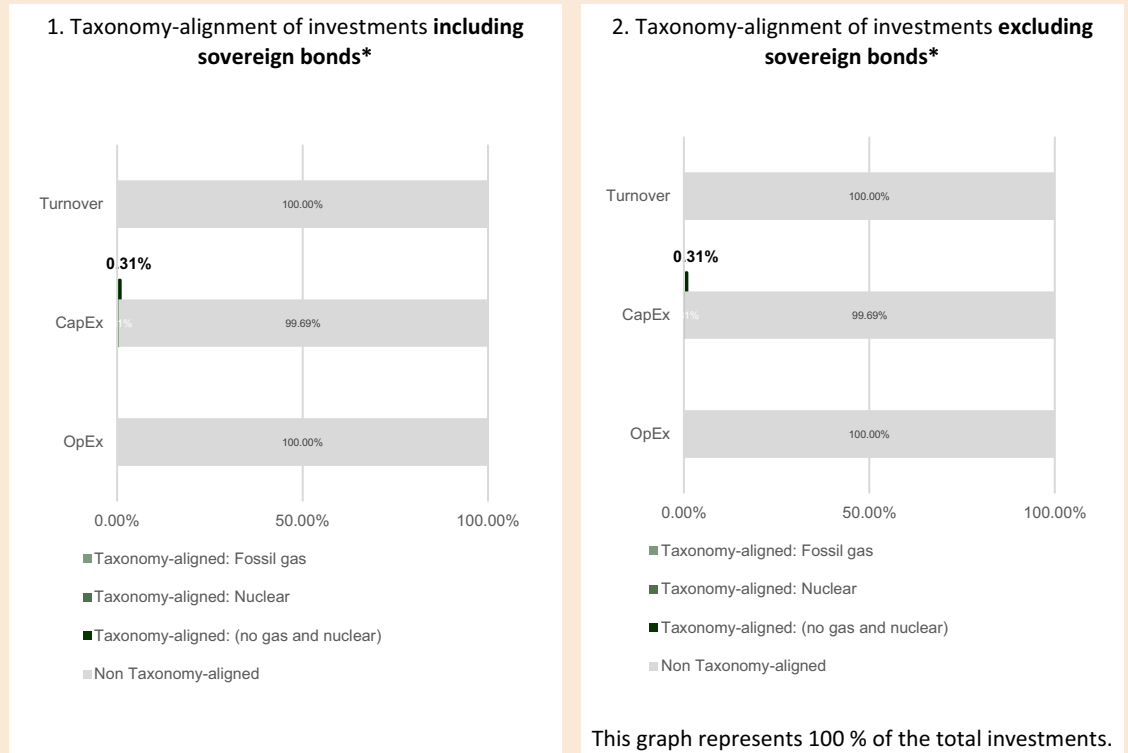

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.00%	0.00%	0.00%	0.00%
CapEx-based	0.31%	0.00%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 24.86% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 33.38% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product Name: AXA World Funds US Credit Short Duration IG (the “Financial Product”)

Legal Entity Identifier: 2138001K1UWJEUHHLH73

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 44.6 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	7.05 / 10	6.63 / 10	99.77 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	7.01 / 10	6.62 / 10	99.86 %
ESG Score	2023	6.9 / 10	6.68 / 10	100 %
ESG Score	2022	6.72 / 10	6.61 / 10	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3.Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 57856.027 Scope 2: 15083.96 Scope 3: 681937.875 Scope 1+2: 72939.984 Scope 1+2+3: 751821.688	Scope 1: 94 Scope 2: 94 Scope 3: 84 Scope 1+2: 94 Scope 1+2+3: 84	Scope 1: 94 Scope 2: 94 Scope 3: 85 Scope 1+2: 94 Scope 1+2+3: 85

<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
BAC 2.087% Var - 14/06/2029 Call	Financial service activities, except insurance and pension funding	1.18%	US
JPM 4.452% Var - 05/12/2029 Call	Financial service activities, except insurance and pension funding	1.05%	US
GS 1.948% Var - 21/10/2027 Call	Activities auxiliary to financial services and insurance activities	1.03%	US
MQGAU 1.34% Var - 12/01/2027 Call	Financial service activities, except insurance and pension funding	1.02%	AU
IQV 5.7% - 15/05/2028 Call	Human health activities	0.98%	US
EXC 5.15% - 15/03/2028 Call	Electricity, gas, steam and air conditioning supply	0.93%	US
DQE 3.616% - 01/08/2027 Call	Electricity, gas, steam and air conditioning supply	0.91%	US
VARNO 7.5% - 15/01/2028 Call	Extraction of crude petroleum and natural gas	0.89%	NO

The portfolio proportions of investments presented above are an average over the reference period.

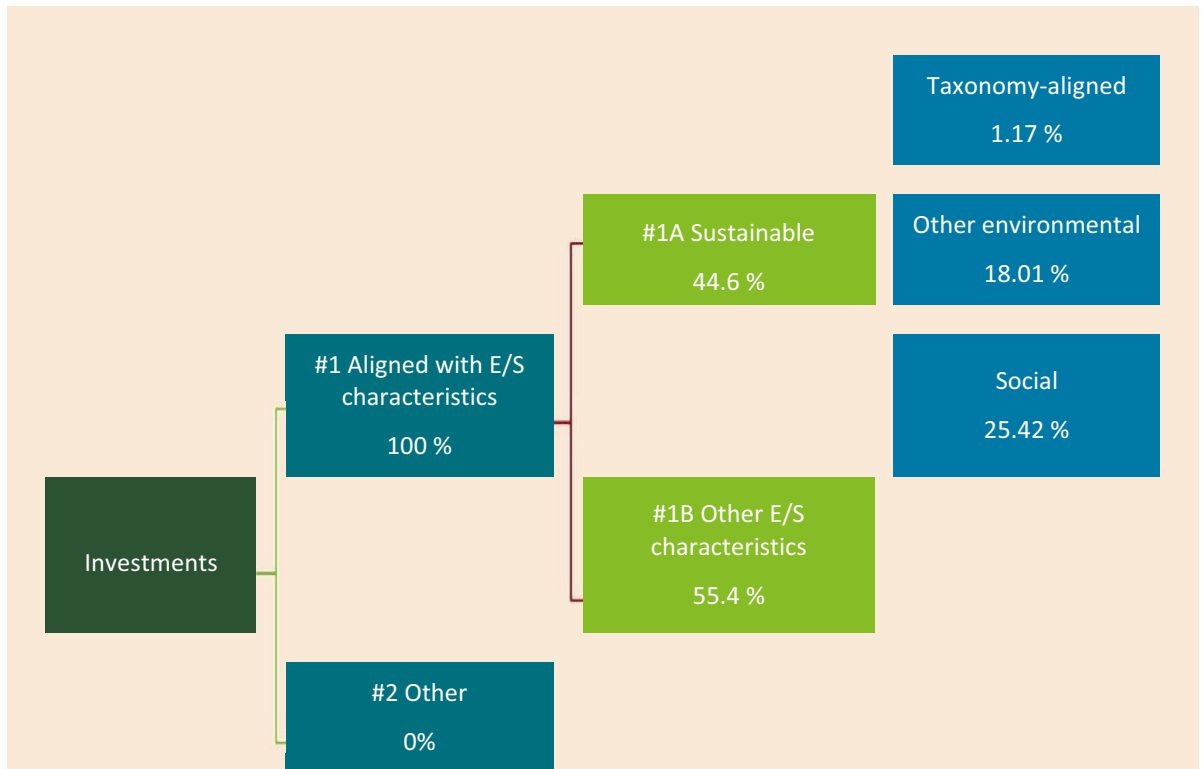

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Financial service activities, except insurance and pension funding	37.28%
Activities auxiliary to financial services and insurance activities	8.11%
Electricity, gas, steam and air conditioning supply	6.43%
Insurance, reinsurance and pension funding, except compulsory social security	5.48%
Telecommunications	5.24%

Real estate activities	3.94%
Human health activities	2.92%
Manufacture of computer, electronic and optical products	2.86%
Extraction of crude petroleum and natural gas	2.76%
Land transport and transport via pipelines	2.71%
Manufacture of food products	2.32%
Wholesale trade, except of motor vehicles and motorcycles	2.08%
Manufacture of motor vehicles, trailers and semi-trailers	1.95%
Rental and leasing activities	1.62%
Manufacture of coke and refined petroleum products	1.58%
Publishing activities	1.47%
Other manufacturing	1.45%
Manufacture of paper and paper products	1.09%
Scientific research and development	0.99%
Manufacture of rubber and plastic products	0.97%
Food and beverage service activities	0.82%
Other	0.79%
Warehousing and support activities for transportation	0.66%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.65%
Accommodation	0.65%
Manufacture of electrical equipment	0.62%
Manufacture of machinery and equipment n.e.c.	0.6%
Manufacture of basic metals	0.4%
Other personal service activities	0.32%
Manufacture of other transport equipment	0.29%
Manufacture of other non-metallic mineral products	0.26%
Manufacture of fabricated metal products, except machinery and equipment	0.26%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.19%
Motion picture, video and television programme production, sound recording and music publishing activity	0.14%
Retail trade, except of motor vehicles and motorcycles	0.08%
Public administration and defence, compulsory social security	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

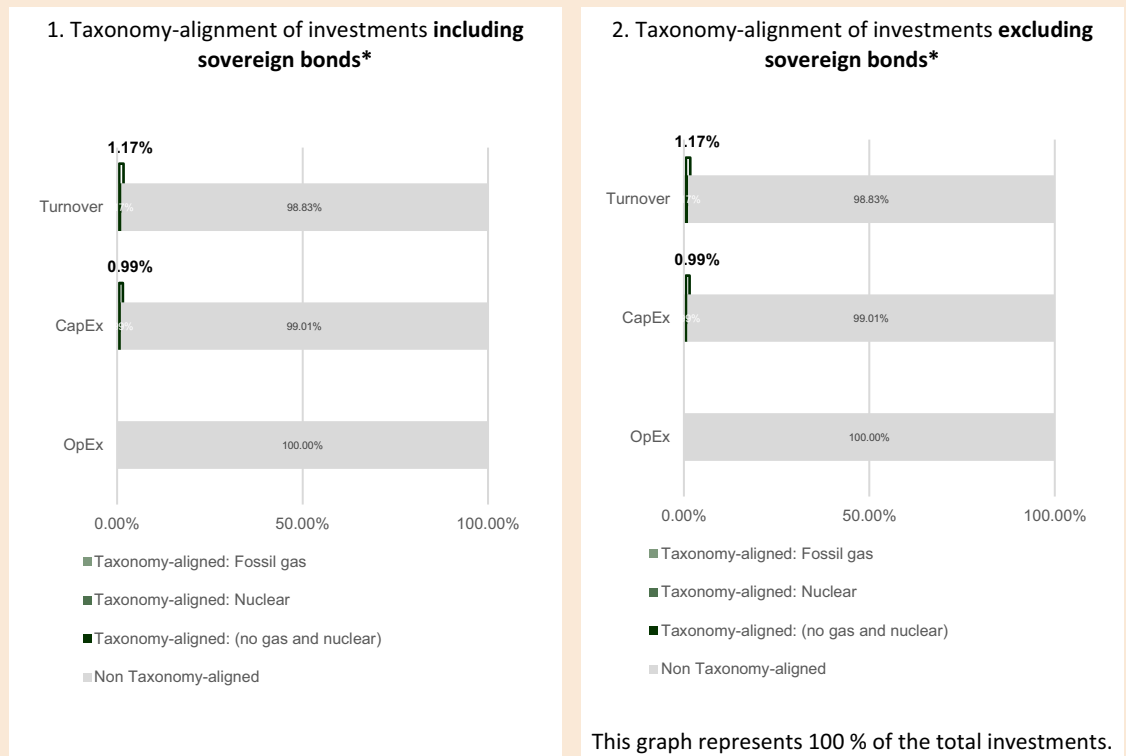

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	1.17%	0.88%	0.00%	0.00%
CapEx-based	0.99%	0.39%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 18.01% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 25.42% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds US Enhanced High Yield Bonds (the “Financial Product”) **Legal Entity Identifier:** 213800FKWSIZVZ5JGJ30

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 23.83 % of sustainable investments <ul style="list-style-type: none"> <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	5.79 / 10	5.47 / 10	98.97 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	5.56 / 10	5.3 / 10	99.97 %
ESG Score	2023	5.08 / 10	5.26 / 10	100 %
ESG Score	2022	4.82 / 10	4.79 / 10	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

		expressed as a weighted average (t/€M)			
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	0.055	7	8

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	88	90
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	53.8 %	67	68
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	14.37%	67	69
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	28.44	40	41
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	25	25

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 6799.523	Scope 1: 67	Scope 1: 69
Ecosystem protection & Deforestation policy			Scope 2: 2230.508	Scope 2: 67	Scope 2: 69
			Scope 3: 70301.211	Scope 3: 61	Scope 3: 62
			Scope 1+2: 9030.031	Scope 1+2: 67	Scope 1+2: 69
			Scope 1+2+3: 78836.234	Scope 1+2+3: 61	Scope 1+2+3: 62
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 89.472	Scope 1+2: 34	Scope 1+2: 35
Ecosystem protection & Deforestation policy			Scope 1+2+3: 597.466	Scope 1+2+3: 61	Scope 1+2+3: 62
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1317.281	Scope 1+2+3: 33	Scope 1+2+3: 34
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	6.13	67	69
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 79.75	Energy Consumption: 37 Energy Production: 0	Energy Consumption: 38
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	22.7	58	59

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	88	90
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	28.44	40	41
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	25	25

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	N/A	Absolute number: 0 Relative number: 0	N/A

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
Stand alone 101380 USD SET SSX	Other	41.63%	N/A
ABEGET 9.75% - 01/03/2027 Call	Information service activities	1.4%	US
BLURAC 6.625% - 15/07/2026 Call	Land transport and transport via pipelines	1.31%	US
ALIAN 6.75% - 15/10/2027 Call	Activities auxiliary to financial services and insurance activities	1.17%	US
OI 6.625% - 13/05/2027 Call	Manufacture of other non-metallic mineral products	1.1%	US
RBACN 6.75% - 15/03/2028 Call	Wholesale trade, except of motor vehicles and motorcycles	1.05%	US
PRSESE 6.25% - 15/01/2028 Call	Security and investigation activities	0.99%	US
ACALTD 6% - 15/11/2027 Call	Retail trade, except of motor vehicles and motorcycles	0.86%	US

USFOOD 6.875% - 15/09/2028 Call	Wholesale trade, except of motor vehicles and motorcycles	0.7%	US
NWL 6.375% - 15/09/2027 Call	Other manufacturing	0.68%	US

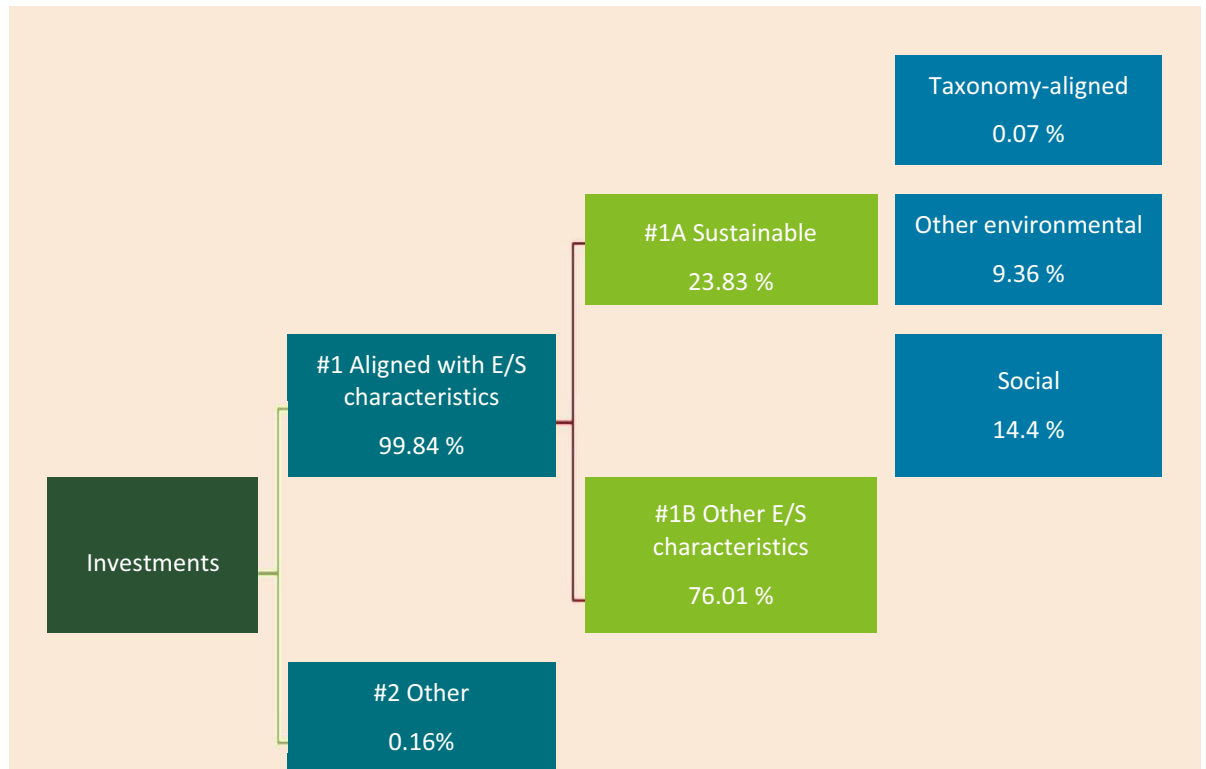

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Other	44%
Land transport and transport via pipelines	4.68%
Security and investigation activities	4.23%
Activities auxiliary to financial services and insurance activities	3.6%
Financial service activities, except insurance and pension funding	3.05%

Publishing activities	2.89%
Telecommunications	2.86%
Wholesale trade, except of motor vehicles and motorcycles	2.54%
Gambling and betting activities	2.09%
Manufacture of chemicals and chemical products	2.01%
Retail trade, except of motor vehicles and motorcycles	1.96%
Manufacture of paper and paper products	1.87%
Information service activities	1.69%
Real estate activities	1.69%
Programming and broadcasting activities	1.52%
Manufacture of motor vehicles, trailers and semi-trailers	1.39%
Manufacture of electrical equipment	1.36%
Other manufacturing	1.34%
Human health activities	1.16%
Manufacture of other non-metallic mineral products	1.16%
Manufacture of machinery and equipment n.e.c.	1.09%
Manufacture of fabricated metal products, except machinery and equipment	1.03%
Office administrative, office support and other business support activities	0.91%
Manufacture of rubber and plastic products	0.88%
Accommodation	0.78%
Rental and leasing activities	0.77%
Motion picture, video and television programme production, sound recording and music publishing activity	0.76%
Manufacture of food products	0.76%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.75%
Food and beverage service activities	0.68%
Advertising and market research	0.66%
Water transport	0.48%
Manufacture of computer, electronic and optical products	0.45%
Manufacture of basic metals	0.44%
Other personal service activities	0.34%
Mining support service activities	0.33%
Creative, arts and entertainment activities	0.29%
Manufacture of wearing apparel	0.25%
Construction of buildings	0.23%
Extraction of crude petroleum and natural gas	0.2%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	0.2%
Manufacture of leather and related products	0.17%
Warehousing and support activities for transportation	0.14%
Sports activities and amusement and recreation activities	0.12%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.1%
Legal and accounting activities	0.09%
Employment activities	0.02%
Civil engineering	0.01%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

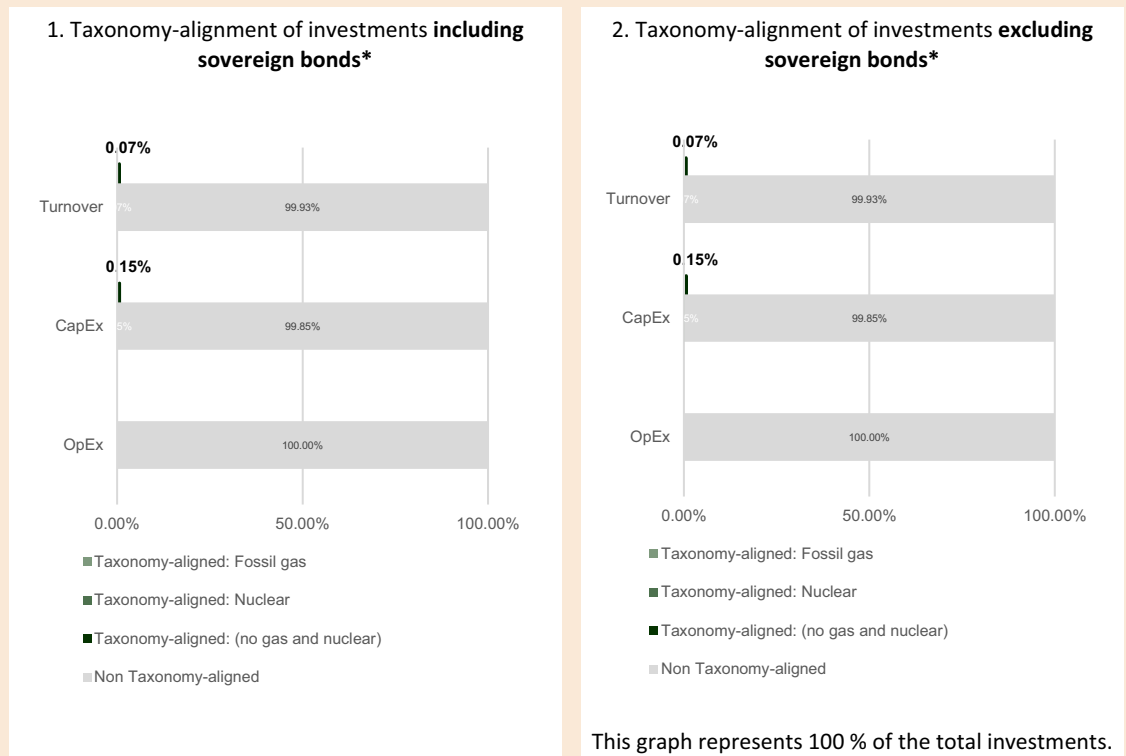

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.07%	0.00%	0.00%	0.00%
CapEx-based	0.15%	0.00%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 9.36% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

 **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 14.4% of sustainable investments with a social objective.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.16% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds US Growth
(the “Financial Product”)

Legal Entity Identifier: 213800J7BKEI6B8FJO48

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	●● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 68.46 % of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- Carbon Intensity

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

Sustainability KPI Name	Value	Coverage
Carbon Intensity	56.88 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	83.33 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

... **And compared to previous periods?**

Sustainability KPI Name	Year	Value	Coverage
Carbon Intensity	2024	67.82 Metric tonnes of carbon dioxide equivalents per million \$ of revenue (for corporates only) - Scope 1+2	100 %
Carbon intensity	2023	98.24 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %
Carbon intensity	2022	104.52 CO2 tons per millions \$ revenue for corporate and in CO2 Kg per PPP \$ of GDP for sovereign	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1.UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or

b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2.Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

How were the indicators for adverse impacts on sustainability factors taken into account?

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the

Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO ₂ e)	Scope 1: 1478.636 Scope 2: 891.107 Scope 3: 23951.5 Scope 1+2: 2369.744 Scope 1+2+3: 26058.428	Scope 1: 98 Scope 2: 98 Scope 3: 83 Scope 1+2: 98 Scope 1+2+3: 83	Scope 1: 100 Scope 2: 100 Scope 3: 84 Scope 1+2: 100 Scope 1+2+3: 84

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 0 Relative number: 0	Absolute number: 25 Relative number: 25

The Financial Product is also taking into account the environmental optional indicator PAI 6 ‘Water usage and recycling’ and the social optional indicator PAI 15 ‘Lack of anti-corruption and anti-bribery policies’.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider’s change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as “non compliant” to UN’s Global Compact Principles, International Labor Organization’s (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 1478.636	Scope 1: 98	Scope 1: 100
Ecosystem protection & Deforestation policy			Scope 2: 891.107	Scope 2: 98	Scope 2: 100
			Scope 3: 23951.5	Scope 3: 83	Scope 3: 84
			Scope 1+2: 2369.744	Scope 1+2: 98	Scope 1+2: 100
			Scope 1+2+3: 26058.428	Scope 1+2+3: 83	Scope 1+2+3: 84
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 6.239	Scope 1+2: 49	Scope 1+2: 50
Ecosystem protection & Deforestation policy			Scope 1+2+3: 66.236	Scope 1+2+3: 83	Scope 1+2+3: 84
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 496.001	Scope 1+2+3: 83	Scope 1+2+3: 84
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	1.96	98	100
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 51.55	Energy Consumption: 98 Energy Production: 0	Energy Consumption: 100
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect those areas (% of AuM)	39.77	88	90
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational	0.0%	98	100

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		Enterprises (% of AuM)			
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	36.37	98	100
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	27	28

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

More details on our methodologies to account and disclose PAIs are available in AXA IM ESG Methodologies Handbook available on AXA IM website: <https://www.axa-im.com/our-policies-and-reports>

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
NVIDIA CORP XNGS USD	Manufacture of computer, electronic and optical products	8.1%	US
APPLE INC XNGS USD	Manufacture of computer, electronic and optical products	7%	US
MICROSOFT CORP XNGS USD	Publishing activities	6.78%	US
ALPHABET INC-CL C XNGS USD	Information service activities	5.73%	US
AMAZON.COM INC XNGS USD	Retail trade, except of motor vehicles and motorcycles	4.64%	US
BROADCOM INC XNGS USD	Manufacture of computer, electronic and optical products	3.7%	US
META PLATFORMS INC-CLASS A XNGS USD	Information service activities	2.57%	US
Portfolio 35230 USD SET SSD	Other	1.89%	N/A
BOOKING HOLDINGS INC XNGS USD	Information service activities	1.88%	US
BOSTON SCIENTIFIC CORP XNYS USD	Manufacture of computer, electronic and optical products	1.75%	US
VISA INC-CLASS A SHARES XNYS USD	Activities auxiliary to financial services and insurance activities	1.64%	US
O'REILLY AUTOMOTIVE INC XNGS USD	Wholesale and retail trade and repair of motor vehicles and motorcycles	1.63%	US
UBER TECHNOLOGIES INC XNYS USD	Information service activities	1.62%	US
ROYAL CARIBBEAN CRUISES LTD XNYS USD	Water transport	1.62%	US
PALO ALTO NETWORKS INC XNGS USD	Publishing activities	1.56%	US

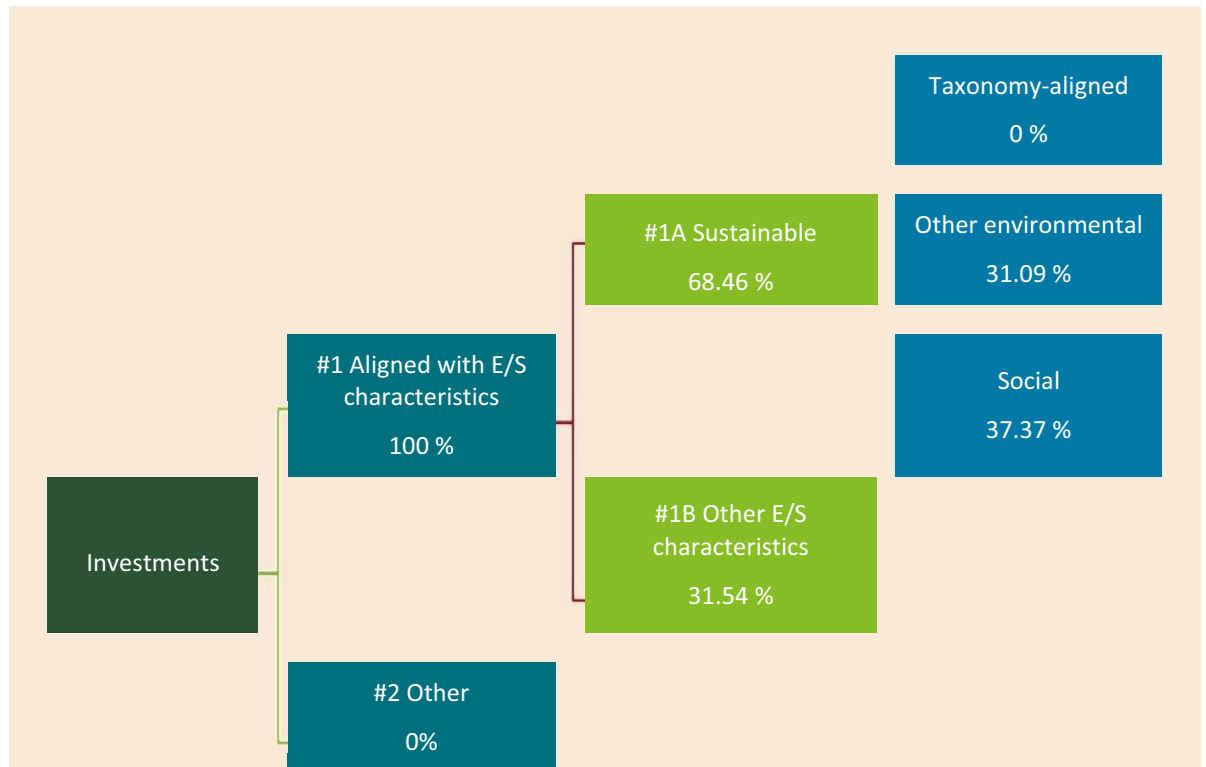

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Manufacture of computer, electronic and optical products	25.56%
Publishing activities	15.58%
Information service activities	12.04%
Retail trade, except of motor vehicles and motorcycles	7.81%
Activities auxiliary to financial services and insurance activities	4.18%

Other manufacturing	3.54%
Insurance, reinsurance and pension funding, except compulsory social security	3.38%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.17%
Financial service activities, except insurance and pension funding	2.77%
Real estate activities	2.53%
Sports activities and amusement and recreation activities	2.09%
Other	1.89%
Manufacture of fabricated metal products, except machinery and equipment	1.78%
Wholesale and retail trade and repair of motor vehicles and motorcycles	1.63%
Water transport	1.62%
Manufacture of chemicals and chemical products	1.54%
Manufacture of beverages	1.48%
Manufacture of other transport equipment	1.43%
Manufacture of electrical equipment	1.35%
Extraction of crude petroleum and natural gas	1.16%
Food and beverage service activities	1.12%
Residential care activities	0.67%
Mining support service activities	0.46%
Waste collection, treatment and disposal activities, materials recovery	0.32%
Land transport and transport via pipelines	0.24%
Manufacture of machinery and equipment n.e.c.	0.22%
Scientific research and development	0.2%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	0.16%
Office administrative, office support and other business support activities	0.08%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The Financial Product did not consider the 'do not significant harm criteria' of the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

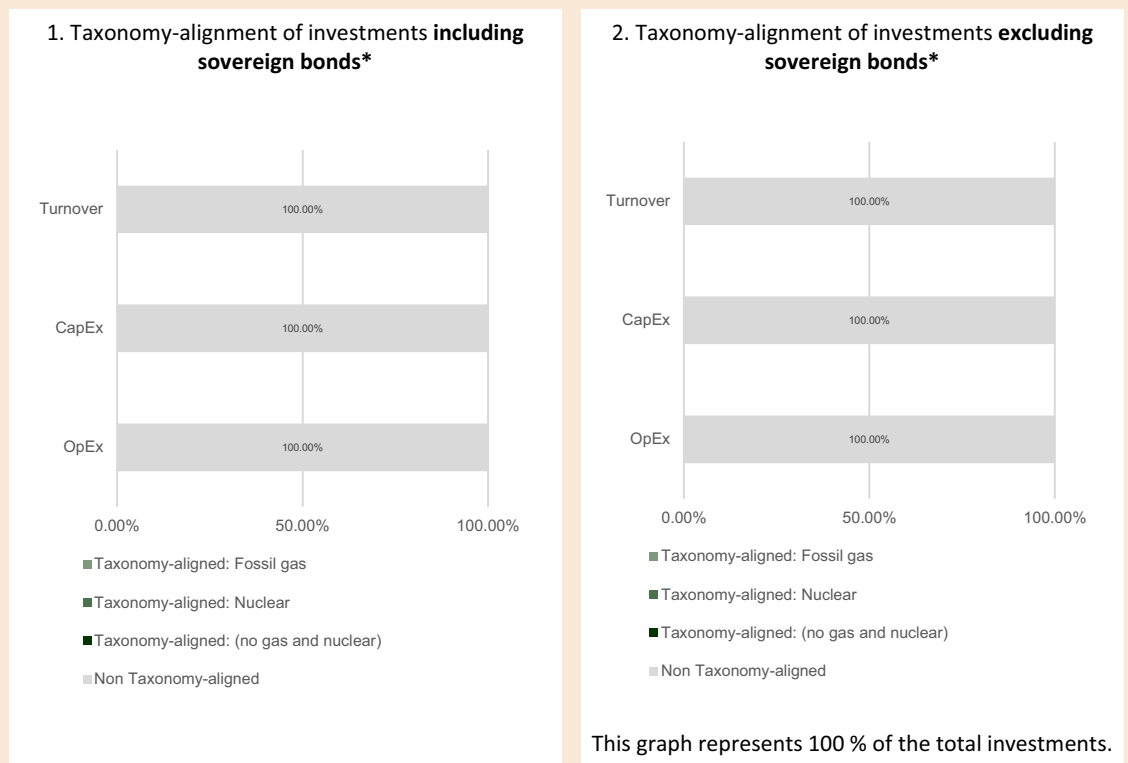

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product did not take into consideration the criteria of the EU Taxonomy environmental objectives. The financial Product did not consider the “do not significantly harm” criteria of the EU Taxonomy.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.00%	0.00%	0.00%	0.00%
CapEx-based	0.00%	0.00%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 31.09% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 37.37% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as equity instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product Name: AXA World Funds US High Yield Bonds (the “Financial Product”) **Legal Entity Identifier:** 213800MRE1HGV6R96K78

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

●● <input type="checkbox"/> YES	● <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 23.43 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Benchmark during the reference period.

Sustainability KPI Name	Value	Benchmark	Coverage
ESG Score	5.6 / 10	5.47 / 10	98.81 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Benchmark	Coverage
ESG Score	2024	5.37 / 10	5.3 / 10	99.69 %
ESG Score	2023	5.08 / 10	5.26 / 10	99.57 %
ESG Score	2022	4.87 / 10	4.79 / 10	100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 83981.578 Scope 2: 26882.891 Scope 3: 851352.5 Scope 1+2: 110864.469 Scope 1+2+3: 955701.375	Scope 1: 57 Scope 2: 57 Scope 3: 53 Scope 1+2: 57 Scope 1+2+3: 53	Scope 1: 61 Scope 2: 61 Scope 3: 56 Scope 1+2: 61 Scope 1+2+3: 56

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes of emissions to water generated by investee companies per	0.01	11	11

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

		million EUR invested, expressed as a weighted average (t/€M)			
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	0.084	7	7

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	79	84
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	43.31 %	57	61
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	14.76%	57	61
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	29.2	32	34
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	25	26

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 1 Relative number: 1	Absolute number: 75 Relative number: 75

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 83981.578	Scope 1: 57	Scope 1: 61
Ecosystem protection & Deforestation policy			Scope 2: 26882.891		
			Scope 3: 851352.5	Scope 3: 53	Scope 3: 56
			Scope 1+2: 110864.469	Scope 1+2: 57	Scope 1+2: 61
			Scope 1+2+3: 955701.375	Scope 1+2+3: 53	Scope 1+2+3: 56
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 119.657	Scope 1+2: 31	Scope 1+2: 32
Ecosystem protection & Deforestation policy			Scope 1+2+3: 416.293		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1333.499	Scope 1+2+3: 27	Scope 1+2+3: 29

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

Largest investments	Sector (NACE level 2)	% Assets	Country
Portfolio 19339 USD SET SSX	Other	4.08%	N/A
CZR 7% - 15/02/2030 Call	Gambling and betting activities	1.18%	US
TIBX 9% - 30/09/2029 Call	Publishing activities	0.9%	US
ZMINFO 3.875% - 01/02/2029 Call	Publishing activities	0.86%	US
SUMMPL 8.625% - 31/10/2029 Call	Land transport and transport via pipelines	0.83%	US
GRA 5.625% - 15/08/2029 Call	Manufacture of chemicals and chemical products	0.77%	US
NOVHOL 8.75% - 15/04/2030 Call	Manufacture of paper and paper products	0.74%	US
NLSN 9.29% - 15/04/2029 Call	Advertising and market research	0.69%	US
BWY 9.25% - 15/04/2027 Call	Manufacture of paper and paper products	0.69%	US
NGL 8.375% - 15/02/2032 Call	Land transport and transport via pipelines	0.69%	US
GTLS 7.5% - 01/01/2030 Call	Manufacture of fabricated metal products, except machinery and equipment	0.67%	US
FOUR 6.75% - 15/08/2032 Call	Activities auxiliary to financial services and insurance activities	0.67%	US
USACUT 9.75% - 15/05/2029 Call	Human health activities	0.65%	US
UVN 8.5% - 31/07/2031 Call	Motion picture, video and television programme production, sound recording and music publishing activity	0.64%	US
RISBAK 8.625% - 01/11/2031 Call	Manufacture of food products	0.63%	US

The portfolio proportions of investments presented above are an average over the reference period.

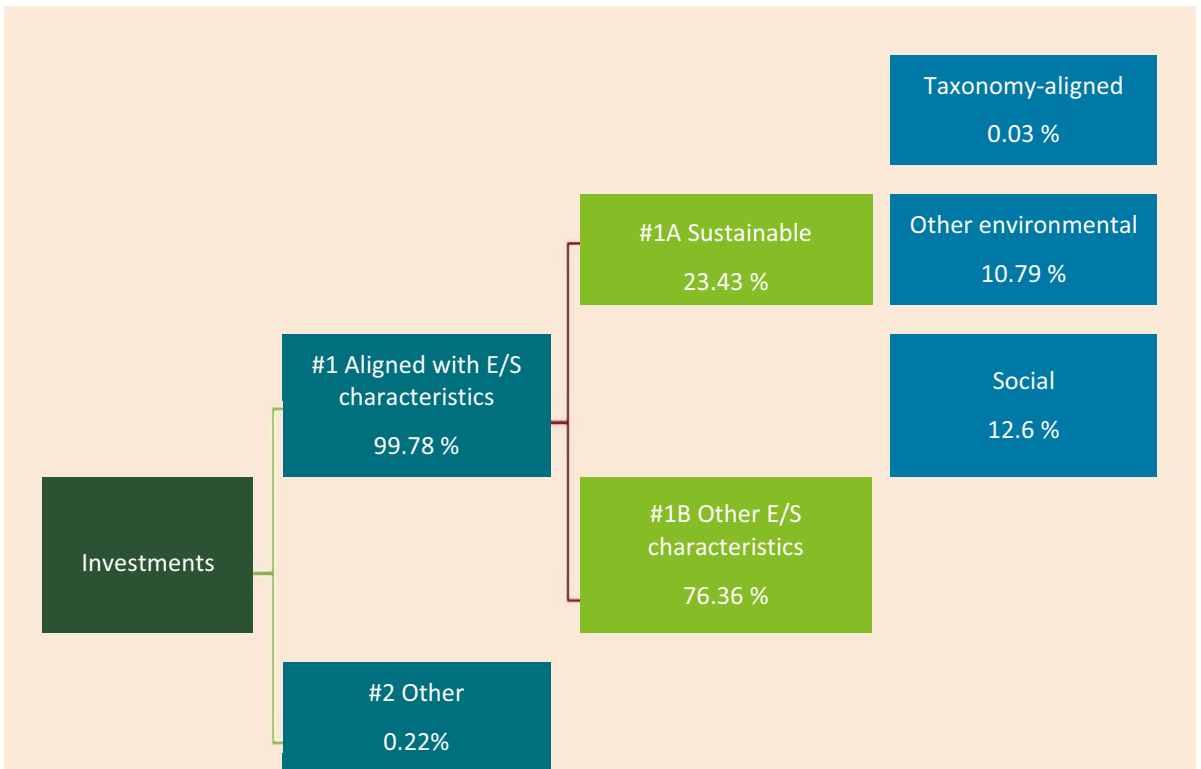

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 01/01/2025-31/12/2025

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Publishing activities	8.55%
Other	7.47%
Manufacture of chemicals and chemical products	6.11%
Land transport and transport via pipelines	6.08%
Telecommunications	5.29%

Human health activities	4.09%
Activities auxiliary to financial services and insurance activities	3.29%
Financial service activities, except insurance and pension funding	2.98%
Manufacture of paper and paper products	2.93%
Wholesale trade, except of motor vehicles and motorcycles	2.86%
Security and investigation activities	2.77%
Gambling and betting activities	2.68%
Water transport	2.52%
Manufacture of machinery and equipment n.e.c.	2.4%
Manufacture of food products	2.33%
Extraction of crude petroleum and natural gas	1.87%
Manufacture of computer, electronic and optical products	1.78%
Manufacture of motor vehicles, trailers and semi-trailers	1.7%
Manufacture of electrical equipment	1.69%
Retail trade, except of motor vehicles and motorcycles	1.66%
Advertising and market research	1.66%
Manufacture of fabricated metal products, except machinery and equipment	1.6%
Office administrative, office support and other business support activities	1.59%
Real estate activities	1.54%
Information service activities	1.54%
Accommodation	1.41%
Computer programming, consultancy and related activities	1.41%
Other manufacturing	1.39%
Rental and leasing activities	1.26%
Programming and broadcasting activities	1.25%
Manufacture of other non-metallic mineral products	1.25%
Food and beverage service activities	1.23%
Manufacture of wearing apparel	1.2%
Civil engineering	1.07%
Wholesale and retail trade and repair of motor vehicles and motorcycles	0.94%
Motion picture, video and television programme production, sound recording and music publishing activity	0.78%
Mining support service activities	0.76%
Manufacture of basic metals	0.73%
Other personal service activities	0.72%
Public administration and defence, compulsory social security	0.71%
Manufacture of rubber and plastic products	0.64%
Printing and reproduction of recorded media	0.62%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	0.61%
Manufacture of other transport equipment	0.61%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.4%
Sports activities and amusement and recreation activities	0.39%
Legal and accounting activities	0.34%
Construction of buildings	0.32%
Travel agency, tour operator reservation service and related activities	0.23%
Creative, arts and entertainment activities	0.2%
Architectural and engineering activities, technical testing and analysis	0.18%
Manufacture of leather and related products	0.16%

Waste collection, treatment and disposal activities, materials recovery	0.11%
Warehousing and support activities for transportation	0.11%
Scientific research and development	0.06%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?³

Yes

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

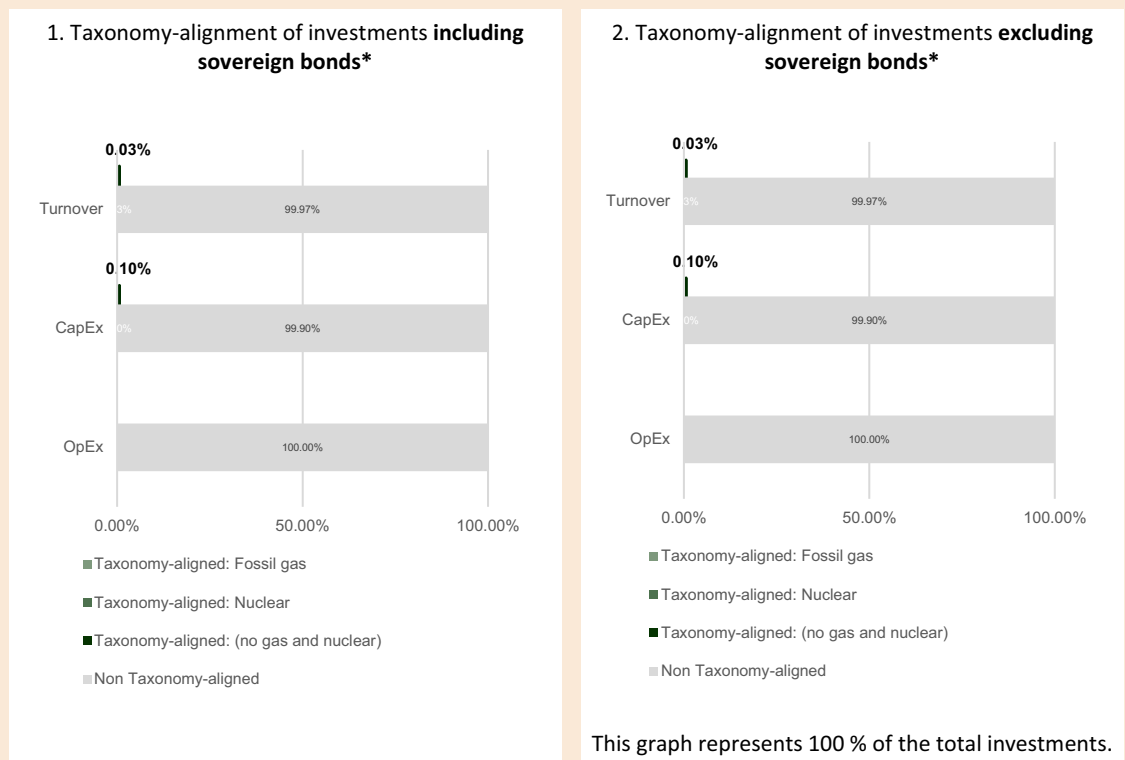

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective -see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.03%	0.00%	0.00%	0.00%
CapEx-based	0.10%	0.00%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 10.79% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 12.6% of sustainable investments with a social objective.

● **What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

The remaining "Other" investments represented 0.22% of the Financial Product's Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Product Name: AXA World Funds US Short Duration High Yield Bonds (the “Financial Product”)

Legal Entity Identifier: 2138002N3U1G1L4YI08

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="checkbox"/> YES	<input type="radio"/> <input checked="" type="checkbox"/> NO
<input type="checkbox"/> It made sustainable investments with an environmental objective : ___% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ___%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 26.76 % of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Financial Product has met the environmental and social characteristics promoted for the reference period by investing in companies considering their:

- ESG Score

The Financial Product has also promoted other specific environmental and social characteristics, mainly:

- Preservation of climate with exclusion policies on coal and oil & gas activities
- Protection of ecosystem and prevention of deforestation
- Better health with exclusion on tobacco
- Labor rights, society and human rights, business ethics, anti-corruption with exclusion on companies in violation of international norms and standards such as the United Nations Global Compact Principles, International Labor Organization’s (ILO) Conventions or the OECD guidelines for Multinational Enterprises AXA IM sectorial exclusions and ESG standards have been applied bindingly at all times during the reference period
- Protection of human rights avoiding investing in debt instruments issued by countries where the worst forms of human right violations are observed.

The Financial Product has not designated an ESG Benchmark to promote environmental or social characteristics.

How did the sustainability indicators perform?

During the reference period, the attainment of the environmental and social characteristics promoted by the Financial Product has been measured with the sustainability indicators mentioned above:

The Financial Product has outperformed its ESG Score compared to Parallel comparison portfolio during the reference period.

Sustainability KPI Name	Value	Parallel comparison portfolio	Coverage
ESG Score	5.81 / 10	5.47 / 10	99.1 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **... And compared to previous periods?**

Sustainability KPI Name	Year	Value	Parallel comparison portfolio	Coverage
ESG Score	2024	5.61 / 10	5.3 / 10	99.97 %
ESG Score	2023	5.15 / 10	5.26 / 10	100 %
ESG Score	2022	4.89 / 10		100 %

N.B.: KPIs and benchmarks are reported based on an average of the data available at each end of month of the reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

During the reference period, the Financial Product has partially invested in instruments qualifying as sustainable investments with various social and environmental objectives (without any limitation) by assessing the positive contribution of investee companies through at least one of the following dimensions:

1. UN Sustainable Development Goals alignment (SDG) of investee companies as reference framework, considering companies which contribute positively to at least one SDG either through the Products and Services they offer or the way they carry their activities (“Operations”). To be considered as a sustainable asset, a company must satisfy the following criteria:

- a) the SDG scoring related to the “products and services” offered by the issuer is equal or above 2, corresponding to at least 20% of their revenues being derived from a sustainable activity, or
- b) using a best in universe approach consisting of giving priority to the issuers best rated from a non-financial viewpoint irrespective of their sector of activity, the SDG scoring of the issuer’s operations is on the better top 2.5%, except in consideration to the SDG-5 (gender equality), SDG 8 (decent work), SDG 10 (reduced inequalities), SDG 12 (Responsible Production and Consumption) and SDG 16 (peace & justice), for which the SDG scoring of the issuer’s Operation is on the better top 5%. For SDG 5, 8, 10 and 16 the selectivity criteria on issuer’s “Operations” is less restrictive as such SDGs are better addressed considering the way the issuer carries their activities than the Products and Services offered by the investee company. It is also less restrictive for SDG 12 which can be addressed through the Products & Services or the way the investee company carries their activities.

The quantitative SDG results are sourced from external data providers and can be overridden by a duly supported qualitative analysis performed by the Investment Manager.

2. Integration of issuers engaged in a solid Transition Pathway consistently with the European Commission’s ambition to help fund the transition to a 1.5°c world - based on the framework developed by the Science Based Targets Initiative, considering companies which have validated Science-Based targets.

3. Investments in Green, Social or Sustainability Bonds (GSSB), Sustainability Linked Bonds:

- a) GSSB are instruments which aim to contribute to various sustainable objectives by nature. As such, investments in bonds issued by corporates and sovereigns that have been identified as green bonds, social bonds or sustainability bonds in Bloomberg data base are considered as “sustainable investments” under AXA IM’s SFDR framework.
- b) With regards to Sustainability Linked Bonds, an internal framework was developed to assess the robustness of those bonds that are used to finance general sustainable purpose. As these instruments are newer leading to heterogeneous practices from issuers, only Sustainability Linked Bonds that get a positive or neutral opinion from AXA IM’s internal analysis process are considered as “sustainable investments”. This analysis framework draws on the International Capital Market Association (ICMA) guidelines with a stringent proprietary approach based on the following defined criteria: (i) issuer’s sustainability strategy and key performance indicators relevance and materiality, (ii) Sustainability performance target’s ambition, (iii) bond characteristics and (iv) sustainability performance target’s monitoring & reporting.

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

During the reference period, the Do No Significant Harm Principle for the sustainable investments the Financial Product made had been achieved by not investing in company meeting any of the criteria below:

- The issuer caused significant harm along any of the SDGs when one of its SDG scores is below –5 based on a quantitative database from an external provider on a scale ranging from +10 corresponding to ‘significantly contributing’ to -10 corresponding to ‘significantly obstructing’, unless the quantitative score has been qualitatively overridden.
- The issuer failed within in AXA IM’s sectorial and ESG standards ban lists, which consider among other factors the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.
- The issuer had a CCC (or 1.43) or lower ESG rating according to AXA IM ESG scoring methodology (as defined in SFDR precontractual annex).

----- **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Financial Product has taken into consideration Principal Adverse Impacts (“PAIs”) indicators to ensure that the sustainable investments did not harm significantly any other sustainability objectives under SFDR.

Principal adverse impacts have been mitigated through (i) AXA IM sectorial exclusion policies and AXA IM ESG standards that have been applied bindingly at all times by the Financial Product, as well as through the filters based on UN Sustainable Development Goals scoring.

Where relevant, Stewardship policies have been an additional risk mitigation on principal adverse impacts through direct dialogue with companies on sustainability and governance issues. Through the engagement activities, the Financial Product has used its influence as an investor to encourage companies to mitigate environmental and social risks relevant to their sectors as described below.

Voting at general meetings has also been an important element of the dialogue with investee companies in order to foster sustainably long-term value of the companies in which the Financial Product invests and mitigate adverse impacts as described below.

AXA IM also relies on the SDG pillar of its sustainable investment framework to monitor and take into account adverse impacts on those sustainability factors by excluding investee companies which have a SDG score under – 5 on any SDG (on a scale from + 10 corresponding to ‘significant contributing impact’ to – 10 corresponding to ‘significant obstructing impact’), unless the quantitative score has been qualitatively overridden following a duly documented analysis by AXA IM Core ESG & Impact Research. This approach enables us to ensure investee companies with the worst adverse impacts on any SDG are not considered as sustainable investments.

Environment:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy Ecosystem Protection & Deforestation policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2, & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 17703.469 Scope 2: 5991.356 Scope 3: 187299.078 Scope 1+2: 23694.822 Scope 1+2+3: 209728.984	Scope 1: 69 Scope 2: 69 Scope 3: 62 Scope 1+2: 69 Scope 1+2+3: 62	Scope 1: 74 Scope 2: 74 Scope 3: 67 Scope 1+2: 74 Scope 1+2+3: 67

SDG no significantly negative score	PAI 8: Emissions to water	Tonnes of emissions to water generated by investee companies per	0.014	14	15

¹ The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively. Not all high impact climate sectors are targeted by the exclusion policy for the time being.

		million EUR invested, expressed as a weighted average (t/€M)			
SDG no significantly negative score	PAI 9: Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average (t/€M)	0.087	8	8

Social and Governance:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
ESG standards policy: violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	86	92
ESG standards policy: violation of international norms and standards (considering an expected correlation between companies non-compliant with international norms and standards and the lack of implementation by companies of processes and compliance mechanisms to monitor compliance with those standards) ²	PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	53.54 %	68	73
SDG no significantly negative score	PAI 12: Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies (%)	14.47%	69	73
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	29.19	42	44
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	24	25

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 1 Relative number: 1	Absolute number: 25 Relative number: 25

The Financial Product is also taking into account the environmental optional indicator PAI 6 'Water usage and recycling' and the social optional indicator PAI 15 'Lack of anti-corruption and anti-bribery policies'.

² The approach used to mitigate the PAI indicators through this exclusion policy will evolve as the improvement in data availability and quality enables us to use the PAI more effectively.

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

During the reference period, the Financial Product did not invest in companies which cause, contribute or are linked to violations of international norms and standards in a material manner. Those standards focus on Human Rights, Society, Labor and Environment. AXA IM excluded any companies that have been assessed as "non compliant" to UN's Global Compact Principles, International Labor Organization's (ILO) Conventions, OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights (UNGPs).

The EU Taxonomy sets out a "do no significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Financial Product took into consideration the following Principal Adverse Impact indicators applying the following exclusion policies and stewardship policies :

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
Climate Risk policy	PAI 1: Green House Gas (GHG) emissions (scope 1, 2 & 3 starting 01/2023)	Metric tonnes of carbon dioxide equivalents (tCO2e)	Scope 1: 17703.469	Scope 1: 69	Scope 1: 74
Ecosystem protection & Deforestation policy			Scope 2: 5991.356		
			Scope 3: 187299.078	Scope 3: 62	Scope 3: 67
			Scope 1+2: 23694.822	Scope 1+2: 69	Scope 1+2: 74
			Scope 1+2+3: 209728.984	Scope 1+2+3: 62	Scope 1+2+3: 67
Climate Risk policy	PAI 2: Carbon Footprint	Metric tonnes of carbon dioxide equivalents per million euro or dollar invested (tCO2e/€M)	Scope 1+2: 76.099	Scope 1+2: 37	Scope 1+2: 38
Ecosystem protection & Deforestation policy			Scope 1+2+3: 552.453		
Climate Risk policy	PAI 3: GHG intensity of investee companies	Metric tonnes of carbon dioxide equivalents per million euro of revenue (tCO2e/€M)	Scope 1+2+3: 1091.008	Scope 1+2+3: 35	Scope 1+2+3: 37
Ecosystem protection & Deforestation policy					
Climate Risk policy	PAI 4: Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector (% of AuM)	5.52	69	74
Climate Risk policy (engagement only)	PAI 5: Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)	Energy Consumption: 80.35	Energy Consumption: 39 Energy Production: 0	Energy Consumption: 41
Ecosystem protection & Deforestation policy	PAI 7: Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity sensitive areas where activities of those investee companies negatively affect	23.02	61	65

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

		those areas (% of AuM)			
ESG standard policy / violation of international norms and standards	PAI 10: Violation of UN Global Compact principles & OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises (% of AuM)	0.0%	86	92
Voting and Engagement policy with systematic voting criteria linked with board gender diversity	PAI 13: Board Gender diversity	Average ratio of female board members in investee companies, expressed as a percentage of all board members (%)	29.19	42	44
Controversial weapons policy	PAI 14: Exposure to controversial weapons	Share of investments in investee companies involved in the manufacture or selling of controversial weapons (% of AuM)	0	24	25

For Sovereign and supranationals:

Relevant AXA IM policies	PAI indicator	Units	Measurement	Coverage in % based on Total AUM	Coverage in % based on eligible assets
<ul style="list-style-type: none"> AXA IM ESG Standards policy, through the exclusion of investee countries with severe social violations Compliance black-list based on international and EU sanctions 	PAI 16: Sovereign Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Absolute number: 0 Relative number: 0	Absolute number: 1 Relative number: 1	Absolute number: 25 Relative number: 25

Source: S&P Trucost, 2025

PAI calculation methodologies have been defined as consistently as possible with current regulatory guidelines. Furthermore, reporting on PAIs can be limited or may reflect reporting periods prior to the reference period mainly due to challenges with regards to both data availability and reliability. PAI definitions and calculation methodologies may still evolve in the future depending on any additional regulatory guidelines, or due to data evolution with, for instance, data provider's change in methodology, or change in data sets used in order to align different reporting frameworks whenever possible.

N.B.: PAIs are reported based on an average of the impacts at each end of quarter of the reference period where data is available.

Figures disclosed on PAI indicators can either be based on the "current value of all investments" as defined by the Regulation, or on "eligible assets with available data only" where relevant. For the purpose of this document, "eligible assets with available data only" refers to all investments (i.e., investee companies, or sovereign and supranational, or real estate assets, depending on the PAI), excluding derivatives, cash and cash equivalent and eligible assets without available data. "Eligible assets without available data" refers to assets that have insufficient data and/or low data quality for a specific investment. The attention of the recipient is drawn to the fact that for some specific PAIs (i.e., PAIs which are relative i) to investee companies' revenue or ii) to non-monetary units such as physical flows), the calculation is rebased on eligible assets with available data only for data quality and comparability purposes. Such exclusion at the denominator is reflected and disclosed through the coverage ratios for the relevant indicators: the coverage disclosed reflects the proportion of eligible assets for which data is available and provided in this document; in addition, to ensure full transparency on the scope of assets where PAIs are disclosed, the coverage based on the current value of all investments is also disclosed.

Reported PAI indicators based on the current value of all investments	Reported PAI indicators based on eligible assets, excluding eligible assets with no available data
PAI indicators 2, 4, 7, 10, 11 and 14	PAI indicators 3 and 6

N.B.: PAI indicators 1 and 16 are not based neither on any of these two approaches as being PAIs in absolute values (noting that the PAI 16 is also relative to the number of invested countries in addition to the absolute value number), i.e., having no denominator in their formula.

What were the top investments of this financial product?

The top investments of the Financial Product (based on the NACE classification's divisions: NACE level 2) are detailed below:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2025-31/12/2025

Largest investments	Sector (NACE level 2)	% Assets	Country
Portfolio USD SET SSX	Other	1.69%	N/A
NXST 5.625% - 15/07/2027 Call	Programming and broadcasting activities	1.41%	US
OI 6.625% - 13/05/2027 Call	Manufacture of other non-metallic mineral products	1.37%	US
THC 6.125% - 01/10/2028 Call	Human health activities	1.24%	US
ACALTD 6% - 15/11/2027 Call	Retail trade, except of motor vehicles and motorcycles	1.2%	US
SIRI 5% - 01/08/2027 Call	Telecommunications	1.19%	US
UNSEAM 4.625% - 01/06/2028 Call	Security and investigation activities	1.16%	US
PFGC 5.5% - 15/10/2027 Call	Wholesale trade, except of motor vehicles and motorcycles	1.1%	US
BLURAC 6.625% - 15/07/2026 Call	Land transport and transport via pipelines	1.08%	US

GEN 6.75% - 30/09/2027 Call	Publishing activities	0.98%	US

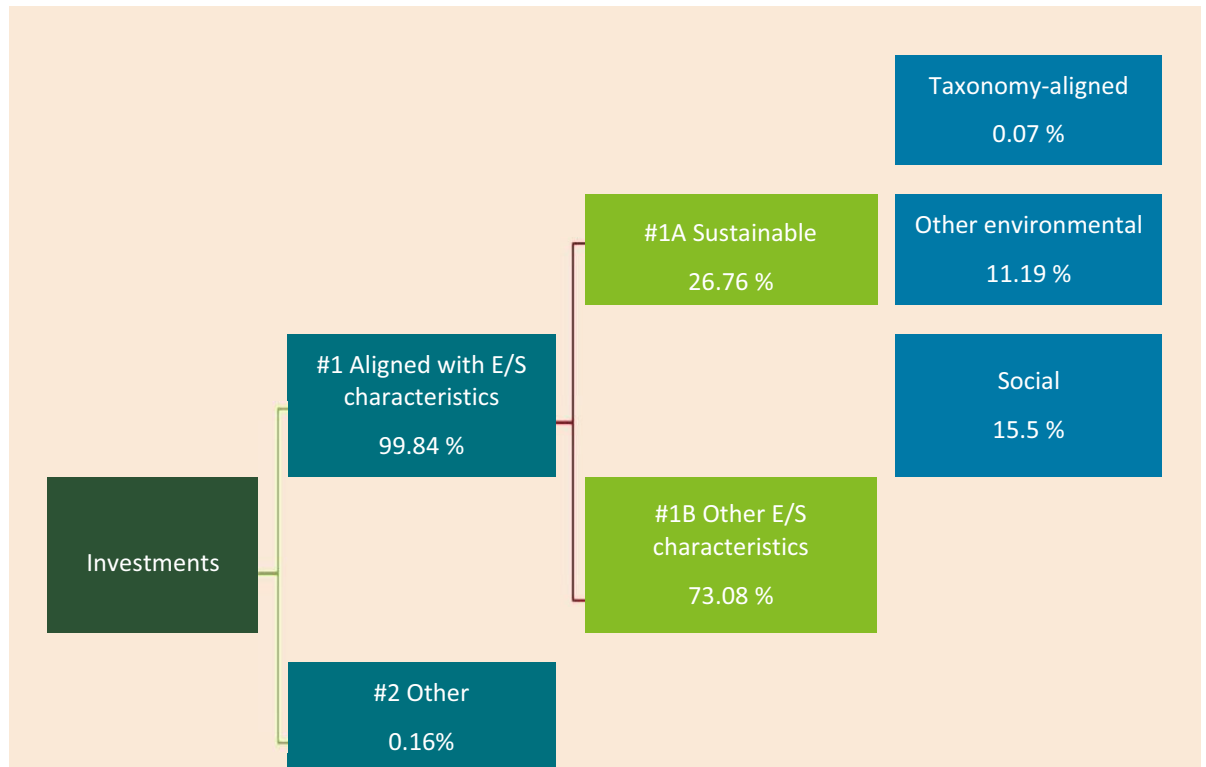

The portfolio proportions of investments presented above are an average over the reference period.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The actual asset allocation has been reported based on an average of the data available at end of each quarter of the reference period.

Depending on the potential usage of derivatives within this product's investment strategy, the expected exposure detailed below could be subject to variability as the portfolio's NAV may be impacted by the Mark to Market of derivatives. For more details on the potential usage of derivatives by this product, please refer to its precontractual documents and its investment strategy described within.

The data presented in this report have been affected by technical difficulties resulting from the migration to a new service provider. These issues have led to anomalies in the processing and consolidation of information, including an inconsistency between the sum of the three SI subcategories and the reported SI total.

Despite these technical difficulties, the information provided offers a fairly accurate measure of the sustainability of the investments.

In which economic sectors were the investments made?

Financial product's investments were made in the economic sectors (based on NACE level 2) detailed below:

Top sector (NACE level 2)	Proportion
Telecommunications	6.76%
Land transport and transport via pipelines	6.73%
Financial service activities, except insurance and pension funding	5.61%
Security and investigation activities	5.03%
Publishing activities	4.85%

Activities auxiliary to financial services and insurance activities	4.78%
Other	4.44%
Real estate activities	3.92%
Gambling and betting activities	3.65%
Manufacture of chemicals and chemical products	3.42%
Human health activities	3.33%
Retail trade, except of motor vehicles and motorcycles	3.17%
Manufacture of electrical equipment	3.05%
Wholesale trade, except of motor vehicles and motorcycles	2.8%
Manufacture of motor vehicles, trailers and semi-trailers	2.7%
Programming and broadcasting activities	2.59%
Other manufacturing	2.29%
Manufacture of paper and paper products	2.25%
Manufacture of machinery and equipment n.e.c.	1.91%
Rental and leasing activities	1.73%
Manufacture of food products	1.7%
Information service activities	1.67%
Manufacture of fabricated metal products, except machinery and equipment	1.64%
Manufacture of rubber and plastic products	1.63%
Wholesale and retail trade and repair of motor vehicles and motorcycles	1.53%
Public administration and defence, compulsory social security	1.51%
Manufacture of other non-metallic mineral products	1.47%
Motion picture, video and television programme production, sound recording and music publishing activity	1.21%
Office administrative, office support and other business support activities	1.13%
Food and beverage service activities	1.08%
Accommodation	1.07%
Manufacture of computer, electronic and optical products	0.96%
Water transport	0.93%
Manufacture of wood and of products of wood and cork, except furniture, manufacture of articles of straw and plaiting materials	0.91%
Advertising and market research	0.88%
Manufacture of basic metals	0.82%
Sports activities and amusement and recreation activities	0.67%
Manufacture of wearing apparel	0.56%
Mining support service activities	0.55%
Other personal service activities	0.53%
Construction of buildings	0.46%
Creative, arts and entertainment activities	0.41%
Manufacture of leather and related products	0.37%
Extraction of crude petroleum and natural gas	0.29%
Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.26%
Architectural and engineering activities, technical testing and analysis	0.16%
Legal and accounting activities	0.16%
Warehousing and support activities for transportation	0.13%
Manufacture of other transport equipment	0.11%
Employment activities	0.09%
Civil engineering	0.07%
Activities of extraterritorial organisations and bodies	0%

The portfolio proportions of investments presented above are an average over the reference period.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Financial Product took into consideration the criteria of the EU Taxonomy environmental objectives, and the “do not significantly harm” principles. It is invested in activities aligned with the objectives of the EU Taxonomy. The Taxonomy alignment of the Financial Product has been provided by an external data provider and have been consolidated at portfolio level by AXA IM. Nevertheless, it has not been subject to an audit or a review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

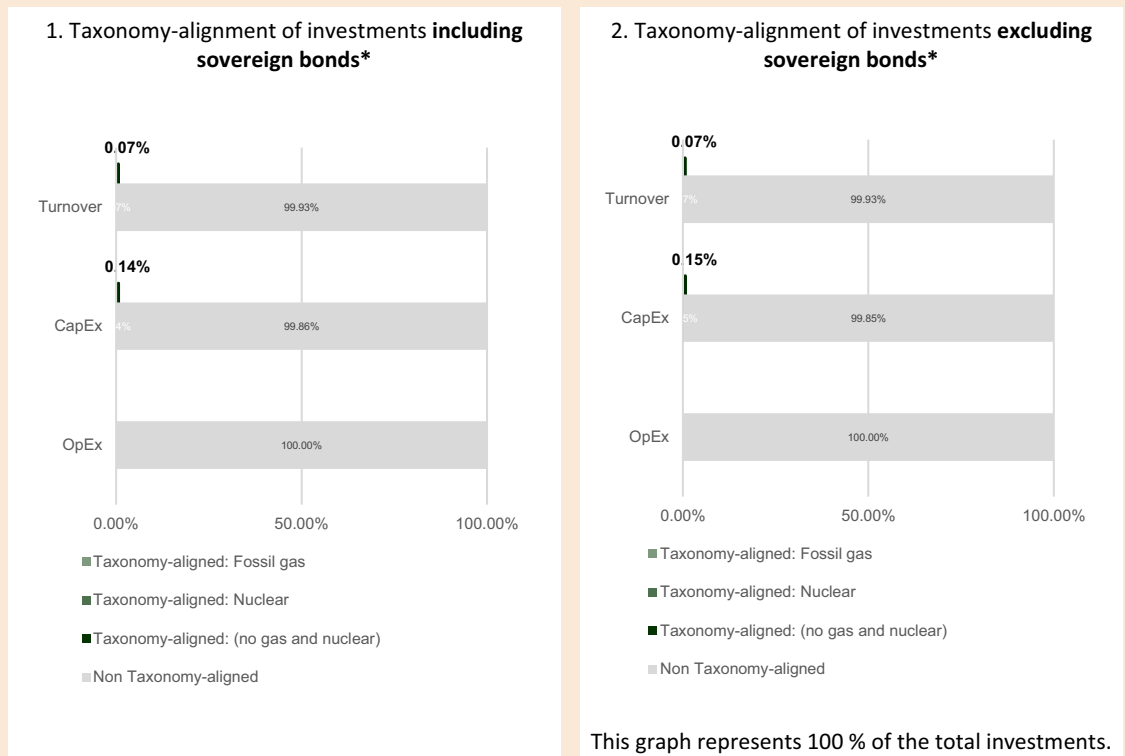

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The Financial Product has invested 0% of its Net Asset Value in transitional activities and 0% of its Net Asset Value in enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Percentage of EU Taxonomy-aligned investments				
	2025	2024	2023	2022
Revenue-based	0.07%	0.00%	0.00%	0.00%
CapEx-based	0.14%	0.00%	0.00%	0.00%
OpEx-based	0.00%	0.00%	0.00%	0.00%

Source: AXA IM, based on S&P Trucost, 2025

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

The share of the sustainable investments with an environmental objective not aligned with the EU Taxonomy has been 11.19% for this Financial Product during the reference period.

Investee companies with an environmental sustainable objective under SFDR are contributing to support UN SDGs or transition to decarbonization based on defined criteria as described above. Those criteria applying to issuers are different from technical screening criteria defined in EU Taxonomy applying to economic activities.

● **What was the share of socially sustainable investments?**

During the reference period, the Financial Product invested in 15.5% of sustainable investments with a social objective.

● **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

The remaining “Other” investments represented 0.16% of the Financial Product’s Net Asset Value.

The “other” assets may have consisted in, as defined in the precontractual annex:

- cash and cash equivalent investments, and ;
- other instruments eligible to the Financial Product and that do not meet the Environmental and/or Social criteria described in this appendix. Such assets may be transferable securities such as debt instruments, derivatives investments and investment collective schemes that do not promote environmental or social characteristics and that are used to attain the financial objective of the Financial Product and / or for diversification and / or hedging purposes.

Environmental or social safeguards were applied and assessed on all “other” assets except on (i) non single name derivatives, (ii) on UCITS and/or UCIs managed by other management company and (iii) on cash and cash equivalent investments described above.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Financial Product continued to apply all AXA IM exclusion policies, for which the exclusion criteria were updated - for the most recent updates - in 2023, but which exclusion lists were updated in 2024. More details on AXA IM exclusion policies are available under the following link: [Sustainability Policies and Reports | AXA IM Corporate](#)

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
