

Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Emerging Markets Corporate Bond Fund, a US Dollar denominated sub fund of the Aberdeen Standard SICAV I, A MInc Hedged SGD Shares (ISIN: LU1820826276). This fund is managed by Aberdeen Standard Investments Luxembourg S.A.

OBJECTIVES AND INVESTMENT POLICY

Investment Objective

The Fund aims to achieve a combination of income and growth by investing in bonds (which are like loans that can pay a fixed or variable interest rate) issued by companies, governments or other bodies in Emerging Market countries.

The Fund aims to outperform the JP Morgan CEMBI Broad Diversified Index (USD) before charges.

Investment Policy Portfolio Securities

- The Fund invests at least two-thirds of its assets in bonds issued by companies based or carrying out much of their business in Emerging Market countries.

- Bonds will be of any credit quality. Up to 100% of the Fund may be invested in sub-investment grade bonds.

- Non-US Dollar denominated issues will typically be hedged back to US Dollars.

- Investment in corporate bonds will follow abrdn's "Promoting ESG Fixed Income Investment Approach".

- This approach utilises abrdn's fixed income investment process, which enables portfolio managers to qualitatively assess how ESG factors are likely to impact on the company's ability to repay its debt, both now and in the future. To complement this research, the abrdn ESG House Score is used to quantitatively identify and exclude those companies exposed to the highest ESG risks. Additionally, abrdn apply a set of company exclusions, which are related to the UN Global Compact, Controversial Weapons, Tobacco Manufacturing and Thermal Coal.

- Green bonds, Social bonds or Sustainable bonds issued by companies otherwise excluded by the environmental screens are permitted, where the proceeds of such issues can be confirmed as having a positive environmental impact.

- Further detail of this overall process is captured within the "Promoting ESG Fixed Income Investment Approach", which will be published at www.abrdn.com under "Sustainable Investing".

- Financial derivative instruments, money-market instruments and cash may not adhere to this approach.

Management Process

- The Fund is actively managed.

- Through the application of the abrdn "Promoting ESG Fixed Income Investment Approach", the Fund targets a lower carbon intensity than the benchmark.

- Engagement with external company management teams is used to evaluate the ownership structures, governance and management quality of those companies, in order to inform portfolio construction. As part of this, up to 5% of asset may be invested in companies in high carbon emitting sectors, which are seen as having ambitious and credible targets to decarbonise their operations, in order to support their transition to ultimately comply with the environmental screens.

- The benchmark is used as a reference point for portfolio construction and as a basis for setting risk constraints, but does not incorporate any sustainable criteria.

- In order to achieve its objective, the Fund will take positions whose weightings diverge from the benchmark or invest in securities which are not included in the benchmark. The investments of the Fund may deviate significantly from the components and their weightings in the benchmark. Due to the active nature of the management process, the Fund's performance profile may deviate significantly from that of the benchmark over the longer term."

Derivatives and Techniques

- The Fund may use investment techniques (including Derivatives) to seek to protect and enhance the value of the Fund and to manage the Fund's risks. Derivatives, such as futures, options and swaps, are linked to the rise and fall of other assets. In other words, they 'derive' their price from another asset. They can generate returns when share prices and/or indices fall.

Investors in the fund may buy and sell shares on any dealing day (as defined in the Prospectus).

If you invest in income shares, income from investments in the fund will be paid out to you. If you invest in accumulation shares, income will be added to the value of your shares.

Recommendation: the fund may not be appropriate for investors who plan to withdraw their money within five years. Investors should satisfy themselves that their attitude to risk aligns with the risk profile of this fund before investing.

RISK AND REWARD PROFILE

Lower risk ← Higher risk
Typically lower rewards ← Typically higher rewards

This indicator reflects the volatility of the fund's share price over the last five years which in turn reflects the volatility of the underlying assets in which the fund invests. Historical data may not be a reliable indication for the future.

The current rating is not guaranteed and may change if the volatility of the assets in which the fund invests changes. The lowest rating does not mean risk free.

The fund is rated as 3 because of the extent to which the following risk factors apply:

- The fund invests in securities which are subject to the risk that the issuer may default on interest or capital payments.
- The fund price can go up or down daily for a variety of reasons including changes in interest rates, inflation expectations or the perceived credit quality of individual countries or securities.
- The fund invests in emerging market equities and / or bonds. Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity and regulatory risks.
- The fund invests in high yielding bonds which carry a greater risk of default than those with lower yields.
- Convertible securities are investments that can be changed into another form upon certain triggers. As such, they can exhibit credit, equity and fixed interest risk. Contingent convertible securities (CoCos) are similar to convertible securities but have additional triggers which mean that they are more vulnerable to losses and volatile price movements and hence become less liquid.

- The use of derivatives carries the risk of reduced liquidity, substantial loss and increased volatility in adverse market conditions, such as a failure amongst market participants. The use of derivatives may result in the fund being leveraged (where market exposure and thus the potential for loss by the fund exceeds the amount it has invested) and in these market conditions the effect of leverage will be to magnify losses.

- Applying ESG and sustainability criteria in the investment process may result in the exclusion of securities within the fund's benchmark or universe of potential investments. The interpretation of ESG and sustainability criteria is subjective meaning that the fund may invest in companies which similar funds do not (and thus perform differently) and which do not align with the personal views of any individual investor.

All investment involves risk. This fund offers no guarantee against loss or that the fund's objective will be attained.

The price of assets and the income from them may go down as well as up and cannot be guaranteed; an investor may receive back less than their original investment.

Inflation reduces the buying power of your investment and income.

The value of assets held in the fund may rise and fall as a result of exchange rate fluctuations.

The fund could lose money if an entity (counterparty) with which it does business becomes unwilling or unable to honour its obligations to the fund.

In extreme market conditions some securities may become hard to value or sell at a desired price. This could affect the fund's ability to meet redemptions in a timely manner.

The fund could lose money as the result of a failure or delay in operational processes and systems including but not limited to third party providers failing or going into administration.

Where the share class is described as "hedged", currency hedging techniques are used which will reduce, but not eliminate, exchange rate risk. In particular, the currency being hedged is not necessarily related to the currencies within the fund. Such techniques also give rise to additional risks and costs.

CHARGES

The charges you pay are used to pay the costs of running the fund including marketing and distributing it. These charges reduce the potential growth of your investment.

One-off charges taken before or after you invest

Entry charge	5.00%
Exit charge	0.00%

These are the maximum charges that we might take out of your money before it is invested and before we pay out the sale proceeds of your investment. In some cases, you might pay less and you should speak to your financial adviser about this.

Charges taken from the fund over a year

Ongoing charges	1.74%
-----------------	-------

Charges taken from the fund under certain specific conditions

Performance fee	0.00%
-----------------	-------
