Authorised Corporate Director's Report

The Authorised Corporate Director (ACD) of M&G Investment Funds (1) presents its interim report and unaudited financial statements for the six months ended 28 February 2026.

The unaudited financial statements of M&G Investment Funds (1), the Authorised Corporate Director's Reports including the portfolio statements, financial highlights and the unaudited financial statements and notes of each sub-fund are presented in their individual sections of this report as set out in the contents page.

Please note that an explanation of key investment terminology is available on our website at mandg.com/private-investor/glossary. A printed copy of the glossary is available upon request by calling customer services and administration as shown within the 'Investor information' section of this report.

Company information

M&G Investment Funds (1) is an umbrella Open-Ended Investment Company (OEIC) and contains eight sub-funds, hereinafter referred to as 'funds' in the rest of this report. Each fund is a UK UCITS (Undertakings for Collective Investment in Transferable Securities) scheme as defined in the Collective Investment Schemes sourcebook, as issued (and amended) by the Financial Conduct Authority (FCA). This OEIC is an Investment Company with Variable Capital (ICVC) incorporated under the Open-Ended Investment Companies Regulations 2001. It is authorised and regulated by the FCA under the Financial Services and Markets Act 2000.

The Company was authorised on 6 June 2001 and was launched on 1 November 2001, following the conversion of a series of authorised unit trusts.

The Company's principal activity is to carry out business as an OEIC. The Company is structured as an umbrella company, and different funds may be established by the ACD from time to time with the agreement of the Depositary and approval from the FCA. The funds are

operated separately and the assets of each fund are managed in accordance with the investment objective and policy applicable to that fund.

As at 28 February 2026, none of the funds held shares of the other funds within this OEIC.

A shareholder is not liable for the debts of the Company and will never be liable to make any further payment to the Company after paying the purchase price of the shares.

Annual value assessment

An annual assessment report is available which shows the value provided to investors in each of M&G's UK-based funds. The assessment report evaluates whether M&G's charges are justified in the context of the overall service delivered to its investors. The latest report can be found on our website at mandg.com/investments/valueassessment

Climate-related Financial Disclosures (TCFD)

We have produced TCFD reports in compliance with the FCA's rules on climate-related financial disclosures. The TCFD fund reports are designed to help you understand the impact these funds have on the climate and equally how climate change could influence the performance of these funds. The reports will also give you the ability to compare a range of climate metrics with other funds. To understand the governance, strategy and risk management that M&G has in place to manage the risks and opportunities related to climate change, please refer to the M&G Investments Management TCFD report.

These reports are available via the Sustainability Disclosures page on our website at mandg.com/footer/sustainability-disclosures

Important information

Effective from 6 February 2026, M&G Investments has updated its Thermal Coal Investment Policy ('the Policy'). A summary of the update can be found at group.mandg.com/thermal-coal-investment-policy-changes

Our intention under the original Policy was to identify whether companies with significant thermal coal activities had plans to transition away from thermal coal. Companies in emerging markets (so called 'non-OECD countries') were given longer to put these plans in place. If they did not, we would consider how best to engage with them. We intended to complete engagement with companies with significant thermal coal exposure in non-OECD countries by March 2024. We then allowed until October 2024 to divest from those companies if they had not adopted transition plans. It took longer than expected to complete this engagement in time for all holdings. For holdings in some funds, we finished the process in early 2025.

We conducted a retrospective review that confirmed, based on our assessment, the delay in engagement did not result in non-compliance with any fund restrictions relating to the Policy. A further review of the operational model was undertaken to ensure all commitments

Authorised Corporate Director's Report

within the updated Policy can be met in a timely fashion on an ongoing basis.

On 2 April 2026, additional benchmark was adopted on M&G North American Value Fund.

Please refer to the 'Investment review' section for details on any significant events during the period. Investment reviews may become quickly outdated in relation to ongoing economic and geopolitical events.

Authorised Corporate Director's Report

Authorised Corporate Director's Responsibilities

The Authorised Corporate Director (ACD) is required to prepare annual and interim reports for the Company. The ACD must ensure that the financial statements, contained in this report, for each of the funds are prepared in accordance with the Investment Association Statement of Recommended Practice for Financial Statements of UK Authorised Funds (SORP) and UK Financial Reporting Standards, and give a true and fair view of the net revenue or expenses and net capital gains or losses for the accounting period, and the financial position at the end of that period.

The ACD is required to keep proper accounting records, and to manage the Company in accordance with the Collective Investment Schemes sourcebook, as issued (and amended) by the FCA, the Instrument of Incorporation and the Prospectus, and to take reasonable steps for the prevention and detection of fraud or other irregularities. Additionally, the ACD is responsible for preparing the financial statements on a going concern basis unless it is appropriate to presume that the Company will not continue in operation.

Directors' statement

This report has been prepared in accordance with the requirements of the Collective Investment Schemes sourcebook, as issued and amended by the FCA.

M&G Securities Limited
15 April 2026

Financial statements and notes

The financial statements for M&G Investment Funds (1) comprise the individual financial statements for each fund and the notes below.

Notes to the financial statements

Accounting policies

There are no material events that have been identified that may cast significant doubt on the Company's ability to continue as a going concern for a period of twelve months from the date these financial statements are authorised for issue. The ACD believes that the Company has adequate resources to continue in operational existence for the foreseeable future and they continue to adopt the going concern basis in preparing the financial statements. The ACD has made an assessment of each fund's ability to continue as a going concern which is made as at the date of issue of these financial statements and considers liquidity, declines in global capital markets, investor intention, known redemption levels, expense projections and key service provider's operational resilience.

The interim financial statements have been prepared on the same basis as the audited financial statements for the year ended 31 August 2025. They are prepared under the historical cost convention, as modified by the revaluation of investments, and in accordance with the Statement of Recommended Practice (SORP) for Authorised Funds issued by the Investment Association in May 2014 and amended in June 2017.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 9 February 2026 has been used.

Investment objective

The fund aims to provide a higher total return (the combination of capital growth and income), net of the ongoing charge figure, than that of the MSCI AC Asia Pacific ex Japan Index over any five-year period.

Investment policy

At least 80% of the fund is invested directly in equity securities and equity-related securities of companies across any sectors and market capitalisations that are incorporated, domiciled, or do most of their business in the Asia Pacific region (excluding Japan).

The fund may also invest in other transferable securities directly and via collective investment schemes (including funds managed by M&G).

The fund may also hold cash and near cash for liquidity purposes.

Derivatives may be used for efficient portfolio management and hedging.

Investment approach

The fund employs a disciplined approach to investment which concentrates on the analysis and selection of individual companies.

The investment approach identifies shares of Asia Pacific ex Japan companies which, in the fund manager's opinion at the time of investment, are undervalued.

When analysing a company, the fund manager focuses on three key factors: return on capital, valuations and corporate governance.

The fund manager believes that company-specific factors, in particular their profitability (which is measured in terms of return on capital), drive share prices over the long term.

Benchmark

MSCI AC Asia Pacific ex Japan Index

The benchmark is a target which the fund seeks to outperform. The index has been chosen as the fund's benchmark as it best reflects the scope of the fund's investment policy. The benchmark is used solely to measure the fund's performance and does not constrain the fund's portfolio construction.

The fund is actively managed. The fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund. The fund's holdings may deviate significantly from the benchmark's constituents.

For each share class the benchmark will be denominated or hedged into the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Authorised Corporate Director's Report

Investment review

For the six months ended 28 February 2026

Performance against objective

Between 1 September 2025 (the start of the review period) and 28 February 2026, the fund's sterling share classes delivered a positive total return (the combination of income and growth of capital). Fund performance was ahead of the benchmark, the MSCI AC Asia Pacific ex Japan Index, which advanced 26.2% during the period.

The fund has outperformed its benchmark over five years (the benchmark returned 7.3% pa in this time). It has therefore met the objective of providing a higher total return, net of the ongoing charge figure, than that of the benchmark, over any five-year period.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

The MSCI AC Asia Pacific ex Japan Index rose over the period and outperformed the MSCI AC World Index.

The fund outperformed relative to the benchmark, supported by strong stock selection across a diversified set of markets and sectors.

Korean equities rallied over the period driven in part by demand for artificial intelligence (AI) chips. Our positions in Hyundai Motor and Samsung Life added to returns, with Hyundai benefiting from accelerating electric vehicle (EV) production and rising investor confidence in its investment spending and innovation initiatives, including robotics. Samsung Life gained as the value of its stake in Samsung Electronics continued to rise.

In China and Hong Kong, markets were taking a pause after a period of strong performance. Nevertheless, bottom-up stock selection added meaningfully. Jiangsu Zhongtian Technology contributed to returns, driven by sustained demand from renewable-energy projects. Weichai Power also performed well, a global leader in hydrogen power solutions for truck engines.

Conversely, our Indian names such as HDFC Bank and Cartrade Tech, an online marketplace for cars and bikes, held back relative performance. We have been able to take advantage of the weakness in the Indian market to add to some quality businesses that were sold off along with the wider market.

Investment activities

We aim to identify significant dislocations between the price and what we consider to be the underlying value of a stock. We seek to exploit these dislocations using what we believe to be our greater perspective compared to other investors. In our opinion, our edge does not come from better forecasting, but rather from the superior pricing of risk.

Our strategy utilises our own independent, proprietary research to identify and extensively research opportunities across a universe of nearly 500 Asia ex-Japan stocks, which has been carefully refined over many years. We deliberately concentrate our efforts around a pre-defined universe of companies.

The desire is for portfolio returns to be driven by our stock picking ability, rather than the portfolio's exposure to be dominated by one or two specific investment styles. We also pay close attention to the portfolio's below-benchmark positions. The performance gap between the portfolio and the benchmark index over time is affected not just by what we invest in, but also what we do not.

We initiated positions in Hankook Tire & Technology, Coway, Sun Art Retail, Beijing-Shanghai High Speed Railway, ASE Technology, Samsung SDS, and D'Alba Global. Hankook is among the most profitable yet undervalued tyre manufacturers globally, in our view, with a notable dividend upside driven by improving governance. Its leadership in EV tyres presents strong growth potential, in our view, and it trades at a substantial discount to global peers in Japan and Europe, despite consistently delivering one of the highest operating profit margins in the industry. Additionally, we initiated new positions in CP ALL, Axis Bank and JINGDONG Industrials. CP ALL, Thailand's 7-11 operator, dominates the market with a 70%+

Authorised Corporate Director's Report

market share. This was a quality stock that pre-COVID traded at a higher valuation because of its strong growth outlook, but has since fallen significantly despite the company meeting earnings expectations in 2025. As a result we have been able to add to the holding at a meaningfully lower valuation.

JINGDONG Industrials, a leading player in offshore wind cables; also strong in optical fibre and power cables, offers a strong recurring revenue business, in our opinion, with growth via new clients and greater existing client penetration.

Conversely, we exited our holdings in Bajaj Auto, Singapore Telecommunications, BYD, Sinopec Kantons and DBS Group.

Outlook

At the end of 2025, markets were dealing with the impact of US tariffs, the direction of interest rates, and concerns around whether China's economy would recover. On the surface, the news through this year on tariffs and China was not very encouraging. Even so, markets delivered strong performance. Technology stocks led the way, but many companies across the region also produced excellent returns thanks to earnings that were better than the market expected.

Overall, this year reinforced our view that focusing on individual companies, rather than trying to predict every macroeconomic event, is the most reliable way to add value. We still monitor the macroeconomic backdrop, but mainly to understand the environment in which companies operate.

Interestingly, some previously highly rated companies in areas like consumer staples, telecommunications and specialist industrials have seen their valuations fall sharply, despite steady earnings. Much of this appears to be a shift in investor attention toward

AI-related stocks. For us, these 'fallen quality' names are just one of many areas where we continue to find diverse, independent sources of opportunity for the portfolio.

David Perrett

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different.

For additional information, including monthly fund commentaries, fund facts, historic prices, distribution rates, performance information (including a range of performance graphs) and other documents, please visit our website at mandg.com/investments

Long-term performance by share class

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested and shown as net of operating charge. Please refer to 'Comparative tables' for the share class launch dates.

Share class	Six months % ^a	Three years % pa	Five years % pa	Ten years % pa
Sterling				
Class 'A' Income	+30.2	+20.6	+13.0	+12.4
Class 'A' Accumulation	+30.2	+20.6	+13.0	+12.4
Class 'I' Income	+30.5	+21.0	+13.5	+13.1
Class 'I' Accumulation	+30.5	+21.0	+13.5	+13.0
Class 'PP' Income	+30.6	n/a	n/a	n/a
Class 'PP' Accumulation	+30.5	n/a	n/a	n/a
Class 'R' Income	+30.3	+20.7	+13.2	+12.8
Class 'R' Accumulation	+30.3	+20.7	+13.2	+12.8
Benchmark	+26.2	+16.5	+7.3	+11.7

^a Not annualised.

Comparative tables

'Operating charges' is calculated as a percentage of average net asset value and represents an annual rate. Where there is a change in the charging structure, you may see variances in the 'operating charges' between the comparative and current period figures.

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 5.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 9 February 2026 has been used.

Sustainability Improvers label

From 2 April 2025, this fund adopted the 'Sustainability Improvers' label. For more information on the fund's sustainability objective and its progress towards achieving the objective as measured against the relevant sustainability metrics, please refer to the fund's consumer-facing disclosure which is available on our website: mandg.co.uk/funds

Investment objective

The fund aims to:

- Provide a higher total return (capital growth plus income), net of the ongoing charge figure, than that of the MSCI Europe ex UK Index over any five-year period; and
- As its Sustainability Goal, support the mitigation of climate change by investing at least 70% of the fund in companies that contribute towards the Paris Agreement climate change goal* and have the potential to reduce their contribution to climate change determined by their potential to decarbonise their operations over time and ultimately reach Net Zero**.

* The overarching Paris Agreement climate change goal is to hold the increase in the global average temperature to well below 2 °C above pre-industrial levels and pursue efforts to limit the temperature increase to 1.5 °C above pre-industrial levels. The principal way to achieve this is to avoid the buildup of greenhouse gases, which in turn will prevent the most severe impacts of climate change, such as extreme weather events, sea-level rise, and biodiversity loss.

** As at the date of this prospectus, the long term target is for investments made by the fund to reach Net Zero by 2050.

Investment policy

The fund invests at least 80% of its net asset value in the equity securities and equity-related instruments of companies across any sector and market capitalisation

that are incorporated, domiciled or listed in Europe, excluding the UK. The fund has a concentrated portfolio and usually holds fewer than 35 companies.

The fund may also invest in other transferable securities, money market instruments, cash and near cash for liquidity purposes, directly and via collective investment schemes (including funds managed by M&G).

Derivatives may be used for efficient portfolio management and hedging.

Investment approach

The fund is a focused Europe ex UK equity fund, investing over the long term in companies which are contributing towards the Paris Agreement climate change goal, as explained in the Sustainability Disclosures section as covered in 'Appendix 1' within the Prospectus.

In addition, these companies need to demonstrate business models competitively positioned to protect their profitability. Importantly, the fund invests in businesses where short-term issues have provided a clear valuation opportunity. The fund employs a bottom-up stock picking approach, driven by the fundamental analysis of individual companies. The fund manager believes that this approach offers a powerful combination, providing the long-term compounded value of quality businesses, as well as the potential boost to a company's share price when a short-term issue has been resolved.

Benchmark

MSCI Europe ex UK Index

The benchmark is the target for the fund's financial objective and is used to measure the fund's financial performance. The index has been chosen as the fund's benchmark as it best reflects the financial aspects of the fund's investment policy.

The benchmark is also used to define Lower Carbon Intensity. The fund manager considers the fund's

Authorised Corporate Director’s Report

weighted average carbon intensity against the benchmark when constructing the portfolio, but the benchmark does not otherwise constrain portfolio construction.

The fund is actively managed and within given constraints, the fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund. The fund’s holdings may deviate significantly from the benchmark’s constituents, and as a result the fund’s performance may deviate materially from the benchmark.

For each share class the benchmark will be denominated or hedged into the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class ‘A’ shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has changed during this period. From 1 September 2025 to 27 October 2025 the risk number was 6.

Investment review

For the six months ended 28 February 2026

Performance against objective

Between 1 September 2025 (the start of the review period) and 28 February 2026, the M&G European Sustain Paris Aligned Fund delivered a positive total return (the combination of income and growth of capital) across all of its sterling share classes. However, the fund underperformed its benchmark, the MSCI Europe ex UK Index, which returned 16.7% over the same period.

Over five years, the fund generated a positive annualised total return across all its share classes, but underperformed its benchmark which returned 12.4% pa over the period. The fund therefore did not meet its financial objective which is to provide a higher total return (capital growth plus income), net of the ongoing charge figure, than that of the MSCI Europe ex UK Index over any five-year period.

With regards to the fund’s sustainability objective, we will report on this separately on an annual basis and publish this to our website. For more information on the fund’s sustainability objective and its progress towards achieving the objective as measured against the relevant sustainability metrics, please refer to the fund’s consumer-facing disclosure: mandg.com/european-sustain-paris-aligned-fund

For the performance of each share class, please refer to the ‘Long-term performance by share class’ table in the ‘Financial highlights’ section of this report.

Performance review

European equities made gains during the period under review. Markets were buoyed by US interest rate cuts, positive earnings news and the desire by some investors to diversify out of the US.

In the fourth quarter of 2025, in terms of equities, Europe was among the best-performing regions globally. European equities continued to gain in the first two months of 2026 despite US tariff threats linked to Greenland (these threats were ultimately withdrawn).

Authorised Corporate Director's Report

Stock selection in healthcare, consumer discretionary and communication services had a negative impact on relative returns. The fund's above-benchmark position in communication services also dented relative performance. In contrast, stockpicking in financials boosted relative returns, as did the fund's above-benchmark position in industrials.

Key detractors from relative performance included Scout24 and Pandora. Pandora's share price declined in November on the back of underwhelming quarterly results and a reduction in its sales outlook. In January, Pandora's share price fell again after it announced its preliminary results: these showed poor sales growth in 2025 due to disappointing holiday-season expenditure.

The top contributors to relative performance were Metso and Lion Finance Group. Metso's share price rose in October after it released impressive quarterly results.

Investment activities

During the period, we opened positions in Swiss eye care company Alcon and online retailer Zalando. We believe Zalando is well set up for the future: the business is European focused with several narrow moats. We closed our positions in Kuehne & Nagel International, WH Smith and Pandora.

Outlook

In recent times, unexciting, high-quality companies which offer a good return on capital and solid long-term defensive characteristics have been left behind. If such companies have (unjustifiably) become entangled in a tariff, policy or tech narrative, their fate has been even worse. Indeed, in 2025, quality companies as a whole suffered the worst relative declines in more than two decades in developed markets. This creates a happy hunting ground for our strategy; we rarely see this part of the market underperform for a prolonged period.

We expect 2026 to be a lively year, during which technology bottlenecks will likely tighten or inflect negatively. Geopolitical tensions, private debt rumblings and newsflow on mega IPOs could potentially affect sentiment – along with the added challenge of mid-term elections in the US during the latter part of the year.

We do not believe we have the ability to predict the precise outcomes of these events, but technical, quant-driven and thematic basket trading create disproportionate swings, often based on quickly-changing narratives. We believe our job is to capitalise on these changes for long-term gain, stacking the odds in our favour.

John William Olsen

Fund manager

An employee of M&G FA Limited which is an associate of M&G Securities Limited.

Please note that the views expressed in this Report should not be taken as a recommendation or advice on how the fund or any holding mentioned in the Report is likely to perform. If you wish to obtain financial advice as to whether an investment is suitable for your needs, you should consult a Financial Adviser.

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 5.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 9 February 2026 has been used.

Sustainability Improvers label

From 2 April 2025, this fund adopted the 'Sustainability Improvers' label. For more information on the fund's sustainability objective and its progress towards achieving the objective as measured against the relevant sustainability metrics, please refer to the fund's consumer-facing disclosure which is available on our website: mandg.co.uk/funds

Investment objective

The fund aims to:

- Provide a higher total return (capital growth plus income), net of the ongoing charge figure, than that of the MSCI World Index over any five-year period; and
- As its Sustainability Goal, support the mitigation of climate change by investing at least 70% of the fund in companies that contribute towards the Paris Agreement climate change goal* and have the potential to reduce their contribution to climate change determined by their potential to decarbonise their operations over time and ultimately reach Net Zero**.

* The overarching Paris Agreement climate change goal is to hold the increase in the global average temperature to well below 2 °C above pre-industrial levels and pursue efforts to limit the temperature increase to 1.5 °C above pre-industrial levels. The principal way to achieve this is to avoid the buildup of greenhouse gases, which in turn will prevent the most severe impacts of climate change, such as extreme weather events, sea-level rise, and biodiversity loss.

** As at the date of this prospectus, the long term target is for investments made by the fund to reach Net Zero by 2050.

Investment policy

The fund invests at least 80% of its net asset value in the equity securities and equity-related instruments of companies across any sector and market capitalisation

that are incorporated, domiciled or listed in any country, including emerging markets. The fund has a concentrated portfolio and usually holds fewer than 40 companies.

The fund may also invest in other transferable securities, money market instruments, cash and near cash for liquidity purposes, directly and via collective investment schemes (including funds managed by M&G).

Derivatives may be used for efficient portfolio management and hedging.

Investment approach

The fund is a focused global equity fund, investing over the long term in companies which are contributing towards the Paris Agreement climate change goal, as explained in the Sustainability Disclosures section as covered in 'Appendix 1' within the Prospectus.

In addition, these companies need to demonstrate business models competitively positioned to protect their profitability.

Importantly, the fund invests in businesses where short-term issues have provided a clear valuation opportunity. The fund employs a bottom-up stock picking approach, driven by the fundamental analysis of individual companies. The fund manager believes that this approach offers a powerful combination, providing the long-term compounded value of quality businesses, as well as the potential boost to a company's share price when a short-term issue has been resolved.

Benchmark

MSCI World Index

The benchmark is the target for the fund's financial objective and is used to measure the fund's financial performance. The index has been chosen as the fund's benchmark as it best reflects the financial aspects of the fund's investment policy.

The benchmark is also used to define Lower Carbon Intensity. The fund manager considers the fund's

Authorised Corporate Director's Report

weighted average carbon intensity against the benchmark when constructing the portfolio, but the benchmark does not otherwise constrain portfolio construction.

The fund is actively managed and within given constraints, the fund manager has freedom in choosing which investments to buy, hold and sell in the fund. The fund's holdings may deviate significantly from the benchmark's constituents, and as a result the fund's performance may deviate materially from the benchmark.

For each share class the benchmark will be denominated or hedged into the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

For the six months ended 28 February 2026

Performance against objective

Between 1 September 2025 (the start of the review period) and 28 February 2026, the M&G Global Sustain Paris Aligned Fund delivered a positive total return (the combination of income and growth of capital) across all of its sterling share classes, but underperformed its benchmark, the MSCI World Index, which returned 10.3% over the same period.

Over five years, the fund generated a positive annualised total return across all its share classes, but underperformed its benchmark which returned 13.9% pa over the period. The fund therefore did not meet its financial objective which is to provide a higher total return (capital growth plus income), net of the ongoing charge figure, than that of the MSCI World Index over any five-year period.

With regards to the fund's sustainability objective, we will report on this separately on an annual basis and publish this to our website. For more information on the fund's sustainability objective and its progress towards achieving the objective as measured against the relevant sustainability metrics, please refer to the fund's consumer-facing disclosure: mandg.com/global-sustain-paris-aligned-fund

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

Financial markets proved resilient in the six months under review, supported by a pivot towards monetary easing, enthusiasm for artificial intelligence (AI)-related stocks and solid corporate earnings.

Japan's stockmarket rose following the election of Sanae Takaichi as prime minister; Takaichi's pro-growth stance has been well received by investors. UK, eurozone and emerging market equities also performed well. US equities recorded gains but underperformed other regions.

Authorised Corporate Director's Report

Stock selection in the technology, financials and healthcare sectors adversely affected relative performance. Though to a lesser extent, the fund's lack of exposure to energy also had a detrimental impact on relative returns. In contrast, stockpicking in communication services and industrials enhanced relative performance, as did the fund's below-benchmark position in technology.

Key detractors from relative performance included Microsoft, Synopsys and Novo Nordisk.

Microsoft's share price declined in January after the release of its quarterly results. Investors are concerned by a significant rise in the company's AI expenditure and slower-than-anticipated growth in its cloud business.

Synopsys's share price fell steeply after it released disappointing quarterly results in September. The company's activity was negatively affected by trade tensions between the US and China.

In October, Novo Nordisk's share price dropped after US President Donald Trump said he would reduce the price of Ozempic. News that its board would be undergoing substantial changes further dented its share price during the month.

The pharmaceutical company then released disappointing quarterly results (and lowered its guidance) in November. Later in the month, trial results showed that its semaglutide medication does not slow decline in patients with Alzheimer's disease.

In February, disappointing 2026 sales guidance had an adverse effect on Novo Nordisk's share price; the company cited pricing pressure as a key reason for the poor outlook. Its share price fell again later in the month after trial results indicated that its weight-loss medication CagriSema is less effective than Eli Lilly's rival product.

The top contributors to relative performance were Alphabet, ASML and Schneider Electric.

In September, Alphabet's share price rose after a US

court ruled that Google would not need to sell its Chrome browser to resolve competition issues. Alphabet's share price increased again in October after it published strong quarterly results and raised its annual capital expenditure in order to keep up with demand for AI. In November, Alphabet's share price was boosted by news that Berkshire Hathaway had acquired a stake in the company. The release of the business's latest Gemini AI model, which received strong reviews, also buoyed its share price.

ASML's share price performed well in January on the back of hopes that AI will continue to drive chip demand. In February, Schneider Electric's quarterly results impressed the market, leading to a rise in its share price.

Investment activities

During the period, we closed our positions in ING Group and Magnum Ice Cream. Magnum Ice Cream came to us via a mandatory spin-out from Unilever. We opened positions in ticketing services company CTS Eventim, online retailer Zalando and software business Intuit.

Outlook

In recent times, unexciting, high-quality companies which offer a good return on capital and solid long-term defensive characteristics have been left behind. If such companies have (unjustifiably) become entangled in a tariff, policy or tech narrative, their fate has been even worse. Indeed, in 2025, quality companies as a whole suffered the worst relative declines in more than two decades in developed markets. This creates a happy hunting ground for our strategy; we rarely see this part of the market underperform for a prolonged period.

We expect 2026 to be a lively year, during which technology bottlenecks will likely tighten or inflect negatively. Geopolitical tensions, private debt rumblings and newsflow on mega IPOs could potentially affect sentiment – along with the added challenge of mid-term elections in the US during the latter part of the year.

Authorised Corporate Director's Report

We do not believe we have the ability to predict the precise outcomes of these events, but technical, quant-driven and thematic basket trading create disproportionate swings, often based on quickly-changing narratives. We believe our job is to capitalise on these changes for long-term gain, stacking the odds in our favour.

John William Olsen

Fund manager

An employee of M&G FA Limited which is an associate of M&G Securities Limited.

Please note that the views expressed in this Report should not be taken as a recommendation or advice on how the fund or any holding mentioned in the Report is likely to perform. Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different.

For additional information, including monthly fund commentaries, fund facts, historic prices, distribution rates, performance information (including a range of performance graphs) and other documents, please visit our website at mandg.com/investments

Long-term performance by share class

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested and shown as net of operating charge. Please refer to 'Comparative tables' for the share class launch dates.

Share class	Six months % ^a	Three years % pa	Five years % pa	Ten years % pa
Sterling				
Class 'A' Income	+3.5	+8.7	+9.3	+11.3

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 5.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 9 February 2026 has been used.

Investment objective

The fund aims to provide a higher total return (the combination of capital growth and income), net of the ongoing charge figure, than that of the MSCI ACWI Index over any five-year period.

Investment policy

The fund will invest at least 80% of its net asset value in the equity securities of companies across any sectors and market capitalisations that are domiciled in any country, including emerging markets.

The fund may also invest in collective investment schemes, other transferable securities and may hold cash for liquidity purposes.

Derivatives may be used for efficient portfolio management.

Investment approach

The investment process of the fund combines top-down and bottom-up analysis. The fund manager aims to identify themes arising from long-term structural shifts, changes or trends. Stocks that can benefit from these themes are then selected on the basis of their quality, growth and valuation.

Themes are identified through the analysis of global macroeconomics, demographics, government policies and spending, and technological innovation, among other considerations.

The bottom-up stock selection process is designed to identify well-run companies which can benefit from those themes and which are trading on attractive valuations with good, sustainable growth prospects.

The fund is invested across the market-cap spectrum and is geographically diversified.

Benchmark

MSCI ACWI Index

The benchmark is a target which the fund seeks to outperform. The index has been chosen as the fund's benchmark as it best reflects the scope of the fund's investment policy. The benchmark is used solely to measure the fund's performance and does not constrain the fund's portfolio construction.

The fund is actively managed. The fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund. The fund's holdings may deviate significantly from the benchmark's constituents.

For each share class the benchmark will be denominated or hedged into the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Authorised Corporate Director's Report

Investment review

For the six months ended 28 February 2026

Performance against objective

Between 1 September 2025 (the start of the review period) and 28 February 2026, the fund delivered a positive total return (the combination of income and growth of capital) across all its share classes. All the share classes except the EUR C and the USD C share classes, underperformed the benchmark, the MSCI ACWI Index, which returned 12.3% in sterling.

Over five years, the fund generated a positive total return across all its share classes but lagged the benchmark which returned 13.1% pa in sterling. Consequently, the fund did not meet the objective of providing a higher total return, net of the ongoing charge figure, than that of the MSCI ACWI Index over any five-year period.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

Over the six months to the end of February 2026, global equity markets delivered strong gains, supported by a combination of interest rate cuts, resilient economic data and sustained investor enthusiasm for select growth themes. Early in the review period, markets responded positively to the US Federal Reserve's (Fed) long-anticipated interest rate cut, with expectations of further cuts becoming increasingly embedded. This underpinned a broad rally that pushed the MSCI ACWI Index to some all-time highs.

Performance was initially led by the US and Asia Pacific ex Japan, with emerging markets also making a strong contribution. Technology-heavy industries, particularly from large US companies, played an important role early on, although sentiment towards the sector became more volatile later in the period amid concerns about stretched company valuations and the sustainability of artificial intelligence (AI)-related gains.

By contrast, defensive areas of the market saw mixed performance as investors moved between optimism and caution.

As the period progressed, gains spread across a wider range of markets and sectors. Shares linked to commodities became more important drivers of returns, as higher oil and metal prices boosted materials and energy companies. Industrials also performed well, reflecting improving breadth and confidence in global activity. Interest-rate sensitive sectors such as utilities and real estate regained support towards the end of the period.

From a regional perspective, emerging markets, Asia Pacific ex Japan and Japan were notable outperformers later in the review period, while Europe delivered solid returns supported by core markets. The US lagged towards the end of the period, particularly as technology stocks came under renewed pressure, despite major indices continuing to register new highs. Overall, markets delivered strong returns over the six months, with different sectors taking turns to lead and more areas of the market performing well.

Fund Review

Against this backdrop, the fund delivered positive returns across all share classes, although many of these lagged the benchmark.

Over the period, the fund's relative performance was driven primarily by sector allocation. An above-benchmark (overweight) allocation to the energy and materials sectors supported returns, helped by strong performances from Franco-Nevada and PrairieSky Royalty. Franco-Nevada benefited from rising precious-metal prices, while PrairieSky was supported by improving conditions in energy markets and solid operational progress. These positions were among the strongest contributors to relative performance.

Stock selection within technology also added value. ASML performed strongly as demand for advanced semiconductor equipment remained robust, particularly linked to investment in AI-related infrastructure. Micron Technology was another key contributor, with its shares

Authorised Corporate Director's Report

rising sharply on improving conditions in the memory-chip market and stronger earnings expectations.

A below-benchmark (underweight) position in financials further boosted relative returns. While some individual financial holdings performed well, the overall underweight helped protect performance during periods when parts of the sector struggled.

However, performance was partially offset by positions elsewhere in the portfolio. An overweight exposure to real estate detracted, with American Tower among the weaker performers over the period. An underweight position in industrials also weighed on relative returns, limiting the benefit from stronger-performing areas of the market.

Several individual stocks detracted from performance. Novo Nordisk weakened amid company-specific concerns, while Pony AI detracted following a challenging period for newer AI-related holdings. In addition, holdings in Alphabet and Tencent detracted over the period.

Overall, the period highlighted the importance of stock selection, with strong contributions from a small number of high-conviction holdings offsetting areas of weakness elsewhere in the portfolio.

Investment activities

Several new investments were added to the portfolio during the period where the managers saw attractive long-term opportunities. Salesforce was introduced to gain exposure to enterprise software, supported by strong levels of future revenue already contracted. The fund also initiated a position in Fermi, an early-stage energy and power infrastructure business focused on supplying electricity to data-centre developments, which we see as well placed to benefit from growing AI-related power demand.

We also added Samsung Electronics, reflecting improving prospects in memory chips used in AI data centres, and Pony AI, a Chinese autonomous-driving business where the managers believe the long-term opportunity is not fully reflected in the share price. In

January, Danone was added to provide exposure to long-term nutrition and health trends.

On the sales side, Martin Marietta Materials was fully sold after a long period of strong performance, as the valuation appeared less attractive in our view. We also sold QUALCOMM and Oracle, as we felt the balance of risk and reward had become less favourable.

Outlook

After a strong turnaround in 2025 it is encouraging to see this momentum continue into early 2026. The first two months of the year have been marked by rising geopolitical tensions and periods of sharp market volatility, particularly in precious metals, energy and software.

The market has recently favoured companies linked to commodities and the economic cycle, while technology stocks have fallen out of favour. We are a rare example of an equity thematic fund in having overweight positions in areas such as energy, materials, utilities and real estate.

Thematic investing allows us to invest across different styles and industries. While we have exposure to sectors that are currently back in favour, our main driver remains stock specific selection, reflecting our fundamentals-based approach. Our goal is to identify strong businesses where exposure to one of our key growth themes is not fully reflected in the current share price.

Maintaining valuation discipline is especially important in a market driven by narratives, where crowding is becoming more common. Our investment process continues to focus on careful capital allocation across themes driven by rigorous bottom-up analysis. trends can generate profitable growth for a variety of stakeholders, including employees, customers, shareholders and broader society.

The fund's strict valuation approach prevents the temptation of being pulled into overpaying for the current market darlings and the ability to generate cashflow is absolutely critical in our company analysis. In our view, fundamentals and value are the key

Authorised Corporate Director's Report

determinants of long-term return. Valuation is a crucial aspect of our stock selection process and we remain as optimistic as ever about the long-term prospects of the companies we are invested in and remain committed to our investment mantra: themes grounded in reality.

Alex Araujo

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 5.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 9 February 2026 has been used.

Investment objective

The fund aims to provide a higher total return (the combination of capital growth and income), net of the ongoing charge figure, than that of the MSCI Japan Index over any five-year period.

Investment policy

At least 80% of the fund is invested directly in equity securities and equity-related instruments of companies across any sectors and market capitalisations that are incorporated, domiciled, or do most of their business in Japan. The fund usually holds a concentrated portfolio of fewer than 60 companies.

The fund may also invest in other transferable securities, money market instruments, cash and near cash for liquidity purposes, directly and via collective investment schemes (including funds managed by M&G).

Derivatives may be used for efficient portfolio management and hedging.

Investment approach

The fund employs a disciplined approach to investment which concentrates on the analysis and selection of individual companies.

The investment approach aims to exploit price volatility.

The fund manager believes that stock market mispricing can and often does occur because psychological factors (ie behavioural biases) prevent investors from always assessing investments rationally. As a result, market prices do not always reflect the fundamental value of companies. The fund seeks to profit from such behavioural biases.

The investment approach filters the fund's investment universe down to a focused list of companies whose shares trade on low valuations relative to their history

and the market. These companies are then subject to rigorous fundamental analysis to attain an understanding of a company's sustainable earnings. This fundamental analysis leads to a high level of conviction for each of the companies held in the fund.

The fund manager expects stock selection to be the main driver of performance.

Benchmark

MSCI Japan Index

The benchmark is a target which the fund seeks to outperform. The index has been chosen as the fund's benchmark as it best reflects the scope of the fund's investment policy. The benchmark is used solely to measure the fund's performance and does not constrain the fund's portfolio construction.

The fund is actively managed. The fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund. The fund's holdings may deviate significantly from the benchmark's constituents.

For each share class the benchmark will be denominated or hedged into the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Authorised Corporate Director's Report

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

For the six months ended 28 February 2026

Performance against objective

Between 1 September 2025 and 28 February 2026 (the period under review), the fund delivered positive returns across all share classes, and outperformed its benchmark, the MSCI Japan Index, which gained 23.2% over the same period.

Over five years, the fund generated an annualised positive return across its share classes and outperformed the benchmark, which returned 10.9% pa over the period. Therefore, the fund achieved its objective to provide a combination of capital growth and income, net of the ongoing charge figure, higher than that of the MSCI Japan Index over any five-year period.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

During the review period the Japanese equity market made sharp gains and extended its 11-month rally in February. Early in the fourth quarter of 2025, interest in artificial intelligence (AI) gained momentum in Japan, with many IT-related companies emerging as beneficiaries. The Japanese market rallied following the election of Sanae Takaichi as Prime Minister, whose pro-growth agenda was warmly received by investors. The new prime minister also unveiled a massive stimulus package designed to spur economic growth in mid-November. Towards the end of 2025 the Bank of Japan raised rates by 0.25% to around 0.75%, their highest level in 30 years, continuing a 'normalisation' process that began in 2024.

Japan performed strongly in January, supported by renewed optimism following Prime Minister Takaichi's call for a snap election, which investors interpreted as supportive for pro-growth fiscal policy. The LDP's landslide victory in February provided further material for investor optimism.

Against this backdrop, the fund generated a positive return and outperformed its benchmark.

The leading contributors were Resonac Holdings, Mitsui and SCREEN Holdings. Resonac Holdings contributed meaningfully to relative performance as the stock rallied thanks to a combination of optimism around electronics-materials earnings and renewed confidence in the company's structural reform, following management's plan to spin off both the graphite electrode and petrochemical businesses later this year. Having already divested 16 non-core operations over the past two years, these two separations would decisively reposition Resonac toward higher-growth, higher-return activities.

Conversely, the leading detractors included NTT, Socionext and Yamato. Despite the fall in NTT's share price we still like this stock as it has arguably one of the most coordinated and technically credible photonics development roadmaps globally. While the market has yet to meaningfully price-in this potential, we have

Authorised Corporate Director's Report

chosen to maintain exposure to NTT as a relatively stable way of gaining exposure to of this emerging theme area.

Socionext has added value in the past, notably following our participation in its IPO. We bought the shares again earlier in the fourth quarter based on our assessment of the company's longer-term potential. Socionext designs specialist chips used in areas positioned at the intersection of AI infrastructure and advanced semiconductor manufacturing. The share price declined significantly during the review period after the company disclosed disappointing expectations for near-term profits. This presents a clear short-term challenge, and we continue to actively review our positioning in the stock.

Investment activities

We aim to identify significant dislocations between the price and what we consider to be the risk of ownership of a company. We seek to exploit these dislocations using what we believe to be our greater perspective earned through our long-term research. In our opinion, our edge does not come from better forecasting, but rather from the superior pricing of risk.

In addition, we actively engage with companies in which we invest as we seek to add value in a range of areas. We believe this differentiates us as investment professionals and enables us to identify unique investment opportunities.

During the review period, we added new positions in Sumitomo Electric, Ajinomoto, Japan Post Holdings, Tokio Marine, Advantest, Socionext and Shin-Etsu Chemical.

The fund switched from Japan Post Bank to Japan Post Holding during the fourth quarter. The stock price increased materially for Japan Post Bank in the nine months since we initiated the position, which gave us an opportunity to rotate into a more attractive proposition in Japan Post Holding.

Conversely, we exited our positions in Aisin, Japan Post Bank and Fuji Electric.

Outlook

Japan's equity market continues to benefit from long-running corporate reforms and company-driven improvements. This trend is accelerating and still has room to grow. Importantly, Japan's market returns are coming from a wide range of sectors – not just AI. Since ChatGPT's launch, about 70% of Japan's equity gains have come from non-AI areas, unlike the US, where AI stocks dominate returns. Broad and balanced returns are often more sustainable.

Japan is still an important part of the global AI ecosystem. Its companies make key components such as semiconductors, testing equipment, advanced materials, precision tools, and factory automation. As AI moves from training to real-world use, these areas – especially robotics – become even more valuable.

On the broader economic side, inflation has shifted from being a drag to a helpful force, encouraging investment and supporting corporate confidence. Risks remain around fiscal policy, bond markets and currency movements, but Japan's way of structuring its debt and its savings base help limit crisis concerns.

Carl Vine

Fund manager

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different.

For additional information, including monthly fund commentaries, fund facts, historic prices, distribution rates, performance information (including a range of performance graphs) and other documents, please visit our website at mandg.com/investments

Long-term performance by share class

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested and shown as net of operating charge. Please refer to 'Comparative tables' for the share class launch dates.

Share class	Six months % ^a	Three years % pa	Five years % pa	Ten years % pa

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 5.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 9 February 2026 has been used.

Investment objective

The fund aims to provide a higher total return (the combination of capital growth and income), net of the ongoing charge figure, than that of the Russell/Nomura Mid-Small Cap Index over any five-year period.

Investment policy

At least 80% of the fund is invested in the equity securities and equity related instruments of smaller companies that are incorporated, domiciled, or do most of their business, in Japan.

Smaller companies are defined as the bottom half in terms of total market capitalisation of all publicly listed companies in Japan.

The fund usually holds a concentrated portfolio of fewer than 60 companies.

The fund may also invest in other transferable securities directly or via collective investment schemes (including funds managed by M&G).

The fund may also hold cash and near cash for liquidity purposes.

Derivatives may be used for efficient portfolio management and hedging.

Investment approach

The fund employs a disciplined approach to investment which concentrates on the analysis and selection of individual companies.

The investment approach aims to take advantage of price volatility.

The fund manager believes that stock market mispricing can and often does occur because psychological factors (ie behavioural biases) prevent investors from always assessing investments rationally. As a result, market prices do not always reflect the

fundamental value of companies. The fund seeks to profit from such behavioural biases.

The investment approach filters the fund's investment universe down to a focused list of companies whose shares trade on low valuations relative to their history and the market. These companies are then subject to rigorous fundamental analysis to attain an understanding of a company's sustainable earnings. This fundamental analysis leads to a high level of conviction for each of the companies held in the fund.

The fund manager expects stock selection to be the main driver of performance.

Benchmark

Russell/Nomura Mid-Small Cap Index

The benchmark is a target which the fund seeks to outperform. The index has been chosen as the fund's benchmark as it best reflects the scope of the fund's investment policy. The benchmark is used solely to measure the fund's performance and does not constrain the fund's portfolio construction.

The fund is actively managed. The fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund. The fund's holdings may deviate significantly from the benchmark's constituents.

For each share class the benchmark will be denominated or hedged into the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Authorised Corporate Director's Report

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

For the six months ended 28 February 2026

Performance against objective

Between 1 September 2025 and 28 February 2026 (the period under review), the fund delivered positive returns across all share classes and outperformed its benchmark, the Russell/Nomura Mid-Small Cap Index, which gained 24.3% over the same period.

Over five years, the fund generated an annualised positive return across its share classes and outperformed the benchmark, which returned 10.8% pa over the period. Therefore, the fund achieved its objective to provide a combination of capital growth and income, net of the ongoing charge figure, higher than that of the Russell/Nomura Mid-Small Cap Index over any five-year period.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

During the review period the Japanese equity market made sharp gains and extended its 11-month rally in February. Early in the fourth quarter of 2025, interest in artificial intelligence (AI) gained momentum in Japan, with many IT-related companies emerging as beneficiaries. The Japanese market rallied following the election of Sanae Takaichi as Prime Minister, whose pro-growth agenda was warmly received by investors. The new prime minister also unveiled a massive stimulus package designed to spur economic growth in mid-November. Towards the end of 2025 the Bank of Japan raised rates by 0.25% to around 0.75%, their highest level in 30 years, continuing a 'normalisation' process that began in 2024.

Japan performed strongly in January, supported by renewed optimism following Prime Minister Takaichi's call for a snap election, which investors interpreted as supportive for pro-growth fiscal policy. The LDP's landslide victory in February provided further material for investor optimism.

Against this backdrop, the fund generated a positive return, and outperformed its benchmark. Relative performance was driven by stock selection, particularly our choices in consumer discretionary and consumer staples.

The leading contributors included CKD and Resonac Holdings. Resonac Holdings contributed meaningfully to relative performance as the stock rallied thanks to a combination of optimism around electronics-materials earnings and renewed confidence in the company's structural reform, following management's plan to spin off both the graphite electrode and petrochemical businesses later this year. Having already divested 16 non-core operations over the past two years, these two separations would decisively reposition Resonac toward higher-growth, higher-return activities, in our view.

Conversely, key detractors included Dip, Simplex Holdings and BIPROGY. Dip, an online recruitment platform, experienced a reduction in client recruitment spend across some key customer groups which is

Authorised Corporate Director's Report

impacting its near term earnings. The company has maintained cost discipline and we remain excited about the medium-to-longer term opportunity and valuation from here.

Simplex is an IT service firm we have followed since its initial public offering (IPO). We were able to buy this stock at an attractive price after the market overreacted to a slight earnings disappointment, and we feel we have gained exposure to a business that has good growth potential over the next few years. While many IT services companies are under pressure as software moves to cloud-based subscription models, we are careful to focus on those we believe are well placed to benefit from AI, rather than those that may fall behind.

Investment activities

We aim to identify significant dislocations between the price and what we consider to be the risk of ownership of a company. We seek to exploit these dislocations using what we believe to be our greater perspective earned through our long-term research. In our opinion, our edge does not come from better forecasting, but rather from the superior pricing of risk.

In addition, we actively engage with companies in which we invest as we seek to add value in a range of areas. We believe this differentiates us as investment professionals and enables us to identify unique investment opportunities.

We feel this is especially true in the small and mid-cap space, where coverage by the investment community is more limited. New investments made during the review period exemplify our approach, where we seek to add value through understanding the business like a business owner, and not simply as a passive investor.

During the quarter we added IT-related names such as Socionext, Anritsu and Sumitomo Electric, along with INFRONEER, a key player in Japan's infrastructure sector trading at a steep discount to peers – a valuation we believe is unjustified given its scale and capabilities. Additionally, we initiated positions in Sanrio, Shiseido,

Ajinomoto, Nissin Foods, SBI Shinsei Bank, Japan Post Holdings, Innovacell, Jeol and Tekscend Photomask.

SBI Shinsei Bank, whose IPO we participated in during the quarter, is a rare example in the Japanese banking sector where we see potential earnings growth through a mix of profitable business areas.

The fund also switched its holding from Toyo Suisan to Nissin Foods. While both are food manufacturers, Nissin offers more geographically diversified exposure and a more attractive ownership structure, with near term but temporary issues contributing to undervaluation, in our view. Our investment in Toyo Suisan was profitable, but we see more compelling company-specific drivers for a recovery in Nissin's share price.

We exited our positions in Earth, PILLAR, Nankai Electric Railway, Aisin, Skymark Airlines, NEC and Seibu Giken.

Outlook

Japan's equity market continues to benefit from long-running corporate reforms and company-driven improvements. This trend is accelerating and still has room to grow. Importantly, Japan's market returns are coming from a wide range of sectors – not just AI. Since ChatGPT's launch, about 70% of Japan's equity gains have come from non-AI areas, unlike the US, where AI stocks dominate returns. Broad and balanced returns are often more sustainable.

Japan is still an important part of the global AI ecosystem. Its companies make key components such as semiconductors, testing equipment, advanced materials, precision tools, and factory automation. As AI moves from training to real-world use, these areas – especially robotics – become even more valuable.

On the broader economic side, inflation has shifted from being a drag to a helpful force, encouraging investment and supporting corporate confidence. Risks

Authorised Corporate Director's Report

remain around fiscal policy, bond markets and currency movements, but Japan's way of structuring its debt and its savings base help limit crisis concerns.

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different.

For additional information, including monthly fund commentaries, fund facts, historic prices, distribution rates, performance information (including a range of performance graphs) and other documents, please visit our website at mandg.com/investments

Long-term performance by share class

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested and shown as net of operating charge. Please refer to 'Comparative tables' for the share class launch dates.

Share class	Six months % ^a	Three years % pa	Five years % pa	Ten years % pa

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 5.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 9 February 2026 has been used.

Investment objective

The fund has two aims:

- To provide a higher total return (the combination of capital growth and income), net of the ongoing charge figure, than that of the S&P 500 Index over any five-year period; and
- To provide an income stream that increases every year in USD terms.

Investment policy

At least 80% of the fund is invested directly in equity securities and equity-related securities of companies across any sector and market capitalisation that are incorporated, domiciled or do most of their business in the US and Canada. The fund usually holds a concentrated portfolio of fewer than 50 companies.

The fund may also invest in other transferable securities directly and via collective investment schemes (including funds managed by M&G).

The fund may also hold cash and near cash for liquidity purposes.

Derivatives may be used for efficient portfolio management and hedging.

Investment approach

The fund employs a disciplined approach to investment which concentrates on the analysis and selection of individual companies.

The fund manager aims to create a diversified portfolio with exposure to a broad range of sectors.

Companies with different drivers of dividend growth are selected to construct a portfolio that has the potential to cope in a variety of market conditions.

Benchmark

S&P 500 Index

The benchmark is a target which the fund seeks to outperform. The index has been chosen as the fund's benchmark as it best reflects the scope of the fund's investment policy. The benchmark is used solely to measure the fund's performance and does not constrain the fund's portfolio construction.

The fund is actively managed. The fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund. The fund's holdings may deviate significantly from the benchmark's constituents.

For each share class the benchmark will be denominated or hedged into the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class 'A' shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Authorised Corporate Director's Report

Investment review

For the six months ended 28 February 2026

Distribution summary

Over the six-month review period to 28 February 2026, the fund distributed income of 22.9616 pence per sterling Class 'A' Income share. This represents a 3.7% increase from the equivalent period last year. The sterling Class 'I' Income share distributed 28.5996 pence, which is 4.2% higher than the payment made at this stage a year ago. In US dollars, the currency in which the fund's income objective is determined, the distribution rose 9.3% from last year for the sterling Class 'A' Income share and 9.9% for the sterling Class 'I' Income share.

Despite concerns about a bubble in Artificial Intelligence (AI), uncertainty regarding the path of future interest-rate cuts and most recently the risk of geopolitical upheaval in the Middle East, the momentum in US dividends continued during the six months under review. Dividends provide a strong signal of corporate confidence and corporate America remains resolute in its optimism. (Dividends represent a share in the profits of a company and are paid out to the company's shareholders at set times of the year.)

Against this backdrop, the fund benefited from higher dividends across a variety of sectors. In contrast to previous years when the majority of holdings delivered dividend increases in the region of 5-15%, we continued to see an unusually high number of companies raising their dividends by 15% or more.

Financials provided a source of impressive growth, led by alternative asset manager ARES Management which rewarded shareholders with a 20% dividend increase. American Express raised its dividend by 16%, while Mastercard and Visa boosted their dividends by 14% in digital payments. Progressive, an auto insurer, and CME, an owner and operator of derivatives exchanges, announced special dividends, in line with their cash returns policy.

We have also been encouraged by the robust dividend growth from the fund's technology-related holdings.

Microsoft and Broadcom extended their long sequence of dividend growth with a 10% increase in software and semiconductors, respectively, while Vertiv Holdings, a provider of critical infrastructure and services for data centres, raised its dividend by an outsized 67%.

The biggest increase, however, hailed from a more economically sensitive sector. Royal Caribbean doubled its dividend after the cruise line company raised its payment twice during the review period against a backdrop of buoyant demand. Also in the consumer discretionary sector, restaurant chain Texas Roadhouse extended its track record of double-digit dividend growth, while Carrier Global and Gibson Energy announced higher dividends in industrials and energy, respectively.

Healthcare continued to deliver reliable growth among defensive sectors as Thermo Fisher Scientific, Abbott Laboratories, Zoetis, AbbVie and Merck increased their dividends in the core 5-15% range. In utilities, NextEra Energy lifted its dividend by 10%, in line with previous years, while the new holding of T-Mobile US in communication services boosted its payment by 16%. (Defensive stocks are companies that tend to have stable earnings and are less affected by peaks and troughs in the economy.)

There were no dividend cuts during the six months under review, but a handful of holdings delivered more modest levels of growth. The low single-digit increases from Elevance Health and Rexford Industrial Realty fell short of our expectations. We trimmed our holding in Elevance after the share price rose but Rexford remains a core holding. We expect the real estate investment trust (REIT) to step up its pace of dividend growth at the appropriate time.

We are pleased that the majority of the fund's holdings continued to deliver solid, and in some cases spectacular, dividend growth, but remain vigilant about the outlook in light of the uncertainties in the US economy. Balance sheet strength is a key consideration in our company research to ensure that dividends can be sustained in the current climate. We take comfort from the fact that many of our holdings are carrying net

Authorised Corporate Director's Report

cash. While caution is prudent, we continue to believe that the fund is well placed to deliver on its objective of providing a rising income stream.

Performance against objective

Between 1 September 2025 (the start of the review period) and 28 February 2026, the fund delivered a positive total return (the combination of income and growth of capital) across all its share classes but underperformed the S&P 500 Index, which returned 7.6% in sterling.

Over five years, the fund generated double-digit returns across all its share classes, but lagged behind the S&P 500 Index which delivered an annualised return of 15.1% in sterling. Therefore the fund did not meet the objective of providing a higher total return, net of the ongoing charge figure, than that of the S&P 500 Index over any five-year period.

The fund is on track to deliver on the objective of growing the distribution every year in US dollars. The growth in distributed income was 9.3% in US dollars for the sterling Class 'A' Income share and 9.9% in US dollars for the sterling Class 'I' Income share during the six months under review.

For the performance of each share class, please refer to the 'Long-term performance by share class' table in the 'Financial highlights' section of this report.

Performance review

The US stockmarket rose, with the major indices – the S&P 500 Index, Dow Jones Industrial Average and the NASDAQ Composite Index – reaching all-time highs, the notable feature of the latest rally being that different parts of the market were leading the gains. The dominance of the new economy gave way to a broader market with energy leading the gains. Industrials and materials delivered double-digit returns among other sectors with greater economic sensitivity, but financials declined, not helped by weakness in financial services. Defensive stocks were back in favour as healthcare, utilities and consumer staples outperformed. Technology was the major laggard as software stocks bore the brunt of fears about the threat of AI; semiconductors, by contrast, continued to gather

momentum as increasing investment in AI fuelled a strong rally for the beneficiaries. Alphabet, the owner of Google, was seen as another winner in the AI race, with the shares jumping more than 40% in US dollars.

Against this backdrop, the fund generated a positive return but underperformed its benchmark, the S&P 500 Index. Intuit and Microsoft held back returns as concerns about AI disruption led to an indiscriminate selloff in software stocks. The negative sentiment quickly spilled over into other industries. ARES Management and Blue Owl Capital fell as alternative asset managers were punished for their software exposure, although the fund benefited from its zero exposure to insurance brokerages and wealth managers which succumbed to similar treatment on potential AI risk.

Sector allocation detracted as the negative effect of an overweight relative to the benchmark in financials and a below benchmark (underweight) position in industrials overshadowed the positive contribution from an overweight in healthcare and an underweight in technology.

Stock selection also added value in technology, with Seagate Technology and Lam Research leading the gains in data storage and semiconductors, respectively. Both stocks doubled during the six months under review. Equinix and Vertiv, which are exposed to the growth in data centres, also rallied strongly. In defensive sectors, NextEra Energy outperformed in utilities, while McKesson climbed to an all-time high in healthcare.

Investment activities

We made three new purchases and four complete sales during the six-month review period, a level of turnover consistent with our long-term investment horizon of three to five years. The number of holdings decreased to 45.

We initiated a holding in T-Mobile US, which offers double-digit growth in a defensive sector on a reasonable starting valuation. We also added to Abbott Laboratories after a stock price dip. The stock fell after the healthcare company cut prices in its nutrition

Authorised Corporate Director's Report

business to deliver volume growth over the long term. We see this development as a warning sign for the consumer staples sector which has been overly reliant on price increases and is likely to be forced into similar action, in our view. The fund continues to have zero exposure to consumer staples.

We also bought back Motorola Solutions in technology having exited the holding in January 2025. The shares have underperformed meaningfully since then and we saw a buying opportunity for a quality company delivering reliable growth. We also added to Microsoft and Intuit as the price of the stock had fallen. Technology remained the fund's largest below benchmark position, however, as we reduced Lam Research and Seagate Technology to take profits.

Walt Disney was the final purchase during the review period. The media conglomerate is more economically sensitive, but after several years of falling valuations we see an attractive entry point for a company benefitting from growth in its direct-to-consumer business.

Cheniere Energy, NIKE, Cogent Communications and Starbucks were sold as a source of cash. We sold some of our holdings in Elevance and Thermo Fisher to take some profits, but healthcare remained the largest overweight relative to the benchmark among defensive sectors. Financials remained the largest overall area of focus, although this reduced after we trimmed our holdings Mastercard and American Express. We used recent share price falls to add to Intercontinental Exchange and ARES Management.

Outlook

We believe dividend investing remains a compelling way to diversify away from the concentration in the US market as the dominance of the new economy starts to unwind. We see plenty of opportunities beyond the narrow elite of technology and AI, with an increasing bias towards defensive quality where we see attractive growth available at undemanding valuations. The need to be selective remains paramount, however, as fundamentals and valuation remain challenging in some areas, most notably consumer staples. We have a clear preference for healthcare among defensive sectors.

Dividends remain on an upward trajectory across the portfolio and we continue to believe that the majority of our holdings can sustain dividend growth in the 5-15% range over the long term, while offering an attractive yield. The fund's yield premium to the US market is at the highest level since we embarked upon our dividend growth strategy in April 2015 for an income stream growing in excess of inflation. We are undeterred in our pursuit of dividend growth and remain committed to its viability not only as a source of rising income, but also as a total return strategy in the US over the long term.

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 5.

Distribution policy

In order to conduct a controlled dividend flow to shareholders, interim distributions will be at the fund manager's discretion, up to the maximum of the distributable income available for the period.

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Authorised Corporate Director's Report

For the purposes of these financial statements, the Prospectus dated 9 February 2026 has been used.

Investment objective

The fund aims to provide a higher total return (the combination of capital growth and income), net of the ongoing charge figure, than that of the S&P 500 Index, over any five-year period.

Investment policy

At least 80% of the fund is invested directly in equity securities and equity related securities of companies across any sectors and market capitalisations that are incorporated, domiciled, or do most of their business activity in the United States of America and Canada.

The fund may also invest in other transferable securities directly and via collective investment schemes (including funds managed by M&G).

The fund may also hold cash and near cash for liquidity purposes.

Derivatives may be used for efficient portfolio management and hedging.

Investment approach

The fund employs a disciplined approach to investment which concentrates on the analysis and selection of individual companies.

The investment approach identifies shares of North American companies which, in the fund manager's opinion at the time of investment, are undervalued.

When analysing companies, the fund manager seeks to identify companies that are mispriced, while trying to avoid companies that are cheap for a reason and whose share prices are unlikely to improve over time.

The investment approach combines strict value-focused screening with rigorous qualitative analysis to ensure the fund has a consistent and disciplined value bias without compromising on the robustness of the companies in the portfolio.

The fund manager expects the overall stock selection and value style to be the main drivers of performance rather than any individual sector or stock.

Benchmark

S&P 500 Index

The benchmark is a target which the fund seeks to outperform. The index has been chosen as the fund's benchmark as it best reflects the scope of the fund's investment policy. The benchmark is used solely to measure the fund's performance and does not constrain the fund's portfolio construction.

The fund is actively managed. The fund manager has complete freedom in choosing which investments to buy, hold and sell in the fund. The fund's holdings may deviate significantly from the benchmark's constituents.

For each share class the benchmark will be denominated or hedged into the relevant share class currency. The benchmark for each share class will be shown in its respective KIID.

Authorised Corporate Director’s Report

Risk profile

For details of the risks associated with this fund, please refer to the Prospectus.

The following table shows the risk number associated with the fund and is based on Sterling Class ‘A’ shares.

The above number:

- is based on the rate at which the value of the fund has moved up and down in the past and is based on historical data so may not be a reliable indicator of the future risk profile of the fund.
- is not guaranteed and may change over time and the lowest risk number does not mean risk free.
- has not changed during this period.

Investment review

For the six months ended 28 February 2026

Performance against objective

Between 1 September 2025 (the start of the review period) and 28 February 2026, the fund’s sterling share classes delivered a positive total return (the combination of income and growth of capital). The fund outperformed the benchmark, the S&P 500 Index, which advanced 7.6% in the review period.

Over five years, the fund generated a positive return but trailed its benchmark, which returned 15.1% pa over this period. Therefore, the fund did not meet its objective of providing a higher total return, net of the ongoing charge figure, than the S&P 500 Index over any five-year period.

For much of the past decade the ‘value’ investment style (investing in cheaper, out-of-favour stocks) has struggled to keep pace with the broader market. The fund’s underperformance over the past five years was

largely due to the significant headwind from its value investing approach, due in part to the sustained rally in large-cap technology stocks since 2023.

For the performance of each share class, please refer to the ‘Long-term performance by share class’ table in the ‘Financial highlights’ section of this report.

Performance review

US equity markets delivered strong gains in the period under review, supported by monetary policy, resilient corporate earnings, and ongoing enthusiasm for artificial intelligence (AI)-related stocks. Markets started positively in September due to a widely expected US Federal Reserve (Fed) interest rate cut and US trade tariff news not being as negative as expected. The S&P 500 reached new highs, driven by robust earnings and expectations of further interest rate cuts in 2025. October saw markets extending their rally, with the S&P 500 marking a sixth consecutive month of gains. Strong technology demand, fuelled by AI optimism, helped NVIDIA become the world’s first US\$5 trillion company. The Fed cut interest rates again in October, though hawkish commentary dampened expectations for additional cuts.

November brought volatility as markets were caught between strong earnings sentiment and concerns over AI-related companies’ valuations. Despite a softer start to December, the ‘Santa Claus Rally’ pushed global indices to fresh highs, though the S&P 500 ended the month largely unchanged amid another Fed interest rate cut and shifting expectations on the sustainability of the AI rally.

2026 started on a positive note for the US stockmarkets as the Fed held interest rates steady. February saw further gains globally, although US technology stocks lagged due to pressure on software businesses from the potential threat of AI and renewed uncertainty following the US Supreme Court’s rejection of earlier tariff measures and President Trump’s subsequent announcement of a new ‘global tariff’.

In this environment, the fund’s value investment style outperformed the growth investment style (investing in companies expected to grow earnings faster than the

Authorised Corporate Director's Report

wider market) over the period under review. 2025 was marked by regional divergence; developed markets outside the US and Canada saw a strong revival in the value style, which outperformed growth, while growth stocks continued to dominate in the US, driven by technology and other high-growth sectors. So far in 2026, however, growth stocks in the US have underperformed, with software names in particular experiencing the sharpest declines amid concerns over the potential impact of generative AI. As a result, the value investment style has started 2026 strongly and has outperformed growth.

The fund's value bias worked in its favour over the period under review, resulting in above-benchmark returns. Stock selection was the main contributor to relative performance during the period. Sector allocation also contributed positively. Technology was the biggest contributor to relative returns mainly from our stock selection and also from our below-benchmark (underweight) to the sector. Within technology, lack of exposure to Microsoft was the largest individual relative contributor as the stock came under pressure as investors feared the impact generative AI will have on its businesses. Other technology names that did well for us were Seagate, Micron, Amkor and Intel as they all performed well driven primarily by an industry-wide surge in demand for AI infrastructure like data storage and chips. Stock selection and an above-benchmark position (overweight) to materials also contributed positively, as did our stock selection in communication services. Within materials, our off-benchmark exposure to Lundin Mining was a large relative contributor as its share price increased significantly driven by a surge in copper and gold prices, record financial results, and strategic acquisitions in South America.

In contrast, our stock selection in consumer staples and real estate were the largest detractors from relative performance. Our off-benchmark exposures to visual social media platform Pinterest and cyber security

solutions provider Check Point Software were the main individual relative detractors. Pinterest, our largest relative detractor, came under pressure as it reported weak Q4 earnings citing reduced advertising spend from large retailers due to the impact of tariffs. Other notable negative contributors to relative returns included our holdings in customer relationship management platform provider Salesforce and real estate investment trust (REIT) Highwoods Properties.

Investment activities

During the period under review, we added food processing business Smithfield Foods, crop fertilizer company Mosaic, US-based bank Huntington Bancshares, energy producer Ovintiv and software business BlackBerry.

We completely exited fashion business Tapestry, construction equipment manufacturer Caterpillar, agricultural sciences company FMC and oil business Kosmos Energy.

Outlook

Looking ahead, we continue to see compelling opportunities for global value investors. Although there has been some diversification away from the US we believe that attractive opportunities remain. Several of our US technology holdings generated strong performance last year, reflecting our focus on high-quality businesses purchased at more attractive valuations. Since the outsized returns in the US have been highly concentrated within a select few stocks, there are still interesting opportunities for disciplined, bottom-up stock picking.

Geopolitical events such as the recent strikes on Iran and US President Trump's policies are likely to remain the focus of many investors. Growth valuations remain elevated in pockets, which may indicate that expectations are high and that prices may be ahead of fundamentals. Whereas, value-oriented sectors are still available at attractive levels, in our view. We continue

Authorised Corporate Director's Report

to find such selective opportunities that support this approach in the US market. We remain optimistic about the long-term outlook for value investing.

Daniel White

Financial highlights

Fund performance

Please note past performance is not a guide to future performance and the value of investments, and the income from them, will fluctuate. This will cause the fund price to fall as well as rise and you may not get back the original amount you invested.

As different share classes have different attributes, for example charging structures and minimum investments, please be aware that their performance may be different.

For additional information, including monthly fund commentaries, fund facts, historic prices, distribution rates, performance information (including a range of performance graphs) and other documents, please visit our website at mandg.com/investments

Long-term performance by share class

To give an indication of the performance of the fund, the following table shows the compound rate of return, per annum, over the period. Calculated on a price to price basis with income reinvested and shown as net of operating charge. Please refer to 'Comparative tables' for the share class launch dates.

Share class	Six months % ^a	Three years % pa	Five years % pa	Ten years % pa
Sterling				
Class 'A' Income	+15.3	+12.6	+13.2	+11.8
Class 'A' Accumulation	+15.3	+12.6	+13.2	+11.8
Class 'I' Income	+15.5	+13.1	+13.7	+12.4
Class 'I' Accumulation	+15.5	+13.1	+13.7	+12.4
Class 'PP' Income	+15.6	+13.2	+13.8	n/a
Class 'PP' Accumulation	+15.6	+13.2	+13.8	n/a
Class 'R' Income	+15.4	+12.8	+13.4	+12.2
Class 'R' Accumulation	+15.4	+12.8	+13.4	+12.2
Benchmark	+7.6	+17.6	+15.1	+15.9

^a Not annualised.

Comparative tables

'Operating charges' is calculated as a percentage of average net asset value and represents an annual rate. Where there is a change in the charging structure, you may see variances in the 'operating charges' between the comparative and current period figures.

Financial statements and notes

Notes to the financial statements

Accounting policies

The financial statements have been prepared in accordance with the 'Accounting policies' set out on page 5.

Distribution policy

In determining the amount available for distribution to Income shares, the annual charge is offset against capital, increasing the amount available for distribution whilst restraining capital performance to an equivalent extent.

Other regulatory disclosures

EU Sustainable Finance Disclosure Regulation

SFDR

The M&G Global Themes Fund is categorised as an Article 6 fund under SFDR.

Taxonomy Regulation

The M&G Global Themes Fund's underlying investments do not take into account the EU criteria for environmental sustainable economic activities.
