

The background features a large, abstract geometric design composed of various shades of blue and white. It resembles a stylized, faceted crystal or a series of overlapping planes, creating a sense of depth and modernity.

Man Funds VI plc

(An Investment Company with
Variable Capital)

Report and Financial Statements for the year ended 31
December 2024

Information in respect of name changes

Effective 11 November 2024, the following sub-funds changed their names:

Original Name	New Name
Man GLG Alpha Select Alternative	Man Alpha Select Alternative
Man AHL TargetRisk	Man TargetRisk

A detailed list of investments purchased and sold during the year is available free of charge upon request from the registered office of the Fund.

Performance table

For each of the sub-funds that form a part of Man Funds VI plc, details of their performance returns during the financial year ended 31 December 2024 are tabulated below.

The individual share classes for which we have reported the performance figures on this page have been selected by the respective investment managers, as their investment manager commentaries throughout this section of the financial statements best reflect the performance of these particular share classes.

To an extent, the investment managers' reports also incorporate their views and analysis on the other share classes belonging to their portfolios, however the performance return for these other share classes during the financial year may differ to what is reported in this subsection of the financial statements.

For any sub-funds which launched part way throughout the financial year, the information tabulated below represents performance from the date of launch to 31 December 2024:

Sub-fund	Share class	Share Class Return	Benchmark	Benchmark(s) Return
Man Alpha Select Alternative	Man Alpha Select Alternative Class DL GBP	1.45%	(1) FTSE ALL SHARE (GBP, TR) - ICB Supersector (Dynamic)	9.47%

Man Alpha Select Alternative – Annual Report Commentary

Market summary

Global equity markets were remarkably strong in 2024. US equities led the way with the S&P 500 up 23%, despite starting at an elevated valuation and a 24% return in 2023. Strong earnings growth, optimism regarding AI driven productivity benefits, supply side reform expectations under a Trump Presidency and significant cash holdings all contributed to this outperformance. Meanwhile, international stocks performed poorly as worries about tariffs, weak demand in Europe and China, and challenges from government policies affected investor confidence and company profits. The strong equity returns were delivered despite the market repricing the pace of interest rate cuts globally, as inflation normalised more slowly than was originally expected, and growth in the US was more resilient than feared. In the UK, the inflation outlook was also hampered by the new government's budget, which increased the national living wage and gave public sector wage increases that will imbed inflation into the economy.

Performance review

Against this backdrop, Man Alpha Select Alternative returned 1.45%¹ over the period. The largest positive contributors to performance in 2024 were Intermediate Capital and Tesco on the long side and a spirits company on the short side. The biggest negative contributors to performance were Segro and SSE on the long side and a tobacco company on the short side.

Intermediate Capital has continued to deliver strongly, its asset raising benefits from the structural trend towards private investments. Strong performance and a valuation that remains at a significant discount to global peers means that the Fund retains a significant long position, although strong absolute performance did result in some profit taking during the year. Tesco performed strongly as the business continued to take market share. The company is executing strongly in an environment where prominent peers remain under pressure due to elevated leverage levels and the discounters are no longer taking market share and are opening space less aggressively. The spirits company share price fell as the combination of ongoing destocking, poor cash generation and an overleveraged balance sheet drove further declines in earnings expectations and the multiple.

Turning to detractors, Segro was particularly disappointing, despite significantly decreasing the size of the position. The company raised money to drive further organic growth investments, particularly in datacenters. However, the company subsequently warned that it would not meet its capex targets for the year and that growth in market rental values were likely to be at the lower end of their expected range, which was a very strange admission for a company that had just raised money. This has been compounded by higher interest rate expectations causing a derating of the real estate sector more broadly. The underperformance in SSE was more surprising given that generally the operational developments were supportive for the investment case. Concerns regarding normalisation of the power price resulting in earnings declines have been dispelled by the company's medium-term guidance, which is based on £60 MWh power forecasts, significantly below where they are today and what one would expect to be locked into the company's long-term hedge book. Higher interest rates, some delays at the Dogger Bank development and related financing fears, as a result of National Grid's capital raise all contributed to the stock's underperformance, which has seen it materially derate. The tobacco company derated along with other tobacco companies. Optimism regarding a Trump administration, a clamping down of illegal vape imports and a troughing of volume declines all helped the sector.

Gross exposure finished the month at 131%. Gross exposure has remained lower than average, whilst the outlook for volatility remains elevated due to the change in stance by the Federal Reserve and in the lead up to President Trump's inauguration. Whilst returns have been frustrating, the lower level of gross exposure has allowed the Fund to manage through a tougher period of performance without significant drawdowns.

Whilst this year's performance has been displeasing, it is within the expected distribution of returns and is therefore a reason for frustration, not worry, but does allow us to learn and implement improvements that hopefully will stand the strategy in good stead going forwards.

Future outlook

The structural developments facing markets remain in place. Inflation and interest rates have risen from historically low levels and the debate as to the pathway and to what level of normalised inflation and neutral interest rates will continue to be debated in the coming year. Whilst markets have swung as sentiment has shifted, it is worth noting the market's medium-term implied inflation rates in the UK and US have not changed materially over the last 12 months, although growth expectations in the US have moved up somewhat over the course of the year.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man TargetRisk Global Equities – Annual Report Commentary

Market summary

The first quarter of 2024 began with the S&P 500 hitting an all-time high during January, as most major indices rallied. Tensions in the Middle East remained high, leading to the oil price rising in January. Global equities were positive overall in February, S&P and Nasdaq indices ending the month at new all-time highs once again. While January inflation numbers were stronger than anticipated in the US which reduced investors' expectations for FED interest rate cuts over 2024 further. Equities continued their rally from February with modest gains in March. The Federal Reserve left its target rate range unchanged for the fifth consecutive meeting, while its updated interest rate projections reiterated three rate cuts in 2024.

The second quarter saw equity markets stumble, breaking the streak of consecutive positive months. A combination of hot US inflation data and a first quarter US GDP print that while weak on first glance, showed resilient private demand, fuelled market fears that central banks will not ease monetary policy as quickly as previously hoped. Yields increased across most of the Treasury curve as higher than expected inflation data lowered the forecasts for the total number of Federal Reserve interest rate cuts this year. May saw a reversal as equities rallied while yields declined across the curve. Strong earnings growth and optimistic inflation data were the main drivers. June saw a traditional risk on environment as equities rose and yields fell. The MSCI World equities index recorded its seventh positive month out of the last eight. Commodities continued to experience mixed performance. In Energies, Oil was the strongest positive performer while Dutch Natural Gas detracted.

Equities and bonds performed well in the third quarter, against a backdrop of a surprise in inflation in July, lower than expected US job reports and a 50bps rate cut by the FED in September. Key geopolitical events included Donald Trump surviving an assassination attempt, Joe Biden withdrawing from the U.S. presidential race, Labour's victory in the UK general election, and a weak showing for France's National Rally. In July, the Bank of Japan hiked interest rates to 0.25%, the highest level since 2008 financial crisis, which led to the (popular) JPY carry trade unwinding and the Yen rallying. At the start of August, Nikkei index was also down heavily, and US stocks experienced the worst one-day decline in 2-year, but then quickly recovered, fuelled by the Fed's rate cut signalling. China announced robust stimulus plans in September to inject more funds, lower borrowing costs and ease mortgage burdens. Commodities performance was mixed. In energies, Oil detracted as Saudi Arabia signaled it intends to abandon its target price of \$100 a barrel and increase production to increase its market share. Elsewhere, Gold remained strong, benefiting from persistent market volatility and inflation concerns.

The fourth quarter began with equity weakness on poor US large cap tech earnings, followed by a strong rally following the US election and the sweeping win by Donald Trump. The Fed cut rates twice (25bps each) in November and December, and signalled two rate cuts in 2025, which had been reduced from the previous four cut expectations amid stickier inflation. The US dollar continued to appreciate in December against most major currency markets driven by the re-pricing of US treasury yields. UK gilts also climbed with the new proposed budget by the UK Government, as well as the poor economic data and higher inflation. Oil prices rose with Middle East uncertainty around the US election. Cryptocurrencies hit all-time highs on optimism around presidential support.

Performance review

Against this backdrop, Man TargetRisk Global Equities returned 10.04%¹ over the period.

The TargetRisk Equities portfolio produced positive returns in January. The cash portfolio was positive and outperformed the market during January. The macro-overlays had a small short position on throughout January, with a small positive contribution to the portfolio but remained largely inactive. The portfolio produced positive returns in February. The cash portfolio was positive, while the macro-overlay was largely inactive. March was positive with US contributing the most from a region perspective. The macro-overlays did not have a position in March.

The portfolio started the second quarter with a negative return in April. From a generic factor perspective, Barra volatility and beta were both out of favour for the month. Against this backdrop the cash portfolio was negative while the macro-overlay provided some offsetting performance. May saw performance reverse with the cash portfolio positive and driving returns. From a sector perspective, Information Technology contributed the most. The cash portfolio was positive during June once again, while the macro-overlays partially detracted from performance, mostly driven by short S&P500 futures during the first half of the month. From a sector perspective, Information Technology and Health Care sectors contributed the most.

The portfolio started the third quarter with positive returns in July, driven by the cash equities portfolio, while the macro-overlays were inactive. August, saw positive returns as well, despite the macro-overlays detracting during the month. The portfolio underperformed in September, with Barra volatility and beta both in favour for the month. The cash equities portfolio was positive for the month, however the macro-overlays detracted, with the biggest detractor being S&P500 futures followed by TOPIX futures.

October, saw negative returns for the portfolio driven by the cash equities portfolio, while no overlay positions were on during the month. Whereas the portfolio produced positive returns in November. From a generic factor perspective, Barra volatility and beta were both in favour during November. The cash portfolio was positive during this period and there were no overlay positions during the month. The portfolio ended the year with a negative return and underperformed as the cash equity portfolio detracted, while the overlay positions provided some offsetting performance driven by shorts in S&P500 & Euro Stoxx 50 futures. From a region perspective, the US detracted the most.

Returns are calculated net of 1.70% management fees plus other fees. Other share classes may charge higher fees.

Man TargetRisk Global Equities – Annual Report Commentary (continued)

Future outlook

As we stand at the threshold of 2025, our philosophy remains steadfast in these unknown times, grounded in the understanding that markets are not to be timed or forecasted with precision but navigated with a balanced, diversified approach centred around risk management.

While the future remains shrouded in uncertainty, we continue to focus on what we can control: our approach to risk management. The challenges we face, be it inflation pressures, potential market shifts, or health crises, underline the need for active, systematic risk management as a cornerstone of our portfolio strategy.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man TargetRisk – Annual Report Commentary

Market summary

Economic news continued in the same vein of positivity throughout Q1 2024 as it left Q4 2023. There was no hard landing, inflation appeared tamed, and central banks around the globe were either contemplating cutting rates or, in the case of the Swiss National Bank, actually doing so. Risk assets benefitted from these effects with many indices, such as the S&P500 hitting all-time highs, powered by continued strength in the 'Magnificent Seven' (seven dominant tech companies). In Japan, the Nikkei also surpassed its 1989 high and the country's central bank ended its negative rate policy and scrapped yield-curve control.

Despite higher-than-expected inflation readings earlier in the quarter, Q2 saw the beginning of the highly anticipated rate cut cycle, with the ECB leading the charge with its first since the pandemic. The Fed was a notable omission here, as weaker economic data vindicated the US central bank's decision to pivot back to its higher-for-longer mantra. Despite this divergence across regions, sovereign bonds overall struggled as investors priced in fewer rate cuts over the year. On the positive side, equities continued their advance as the Magnificent 7 drove an albeit narrow rally, taking the S&P to new all-time highs. Geopolitical risk was also back in the fore as tensions in the Middle East once again flared in April. Then towards the back end of the quarter, French assets sold off following a snap legislative election called by President Macron.

Despite the material risk-off move in August, driven by fears of a US recession and the unwinding of the yen carry trade, stocks advanced over the quarter. US equities continued to appreciate while 'bazooka'-style stimulus measures from China sparked a significant rally in Chinese equities, with the Hang Seng Index achieving its best quarterly performance since Q2 2009. Bonds rose as investors anticipated more rapid rate cuts, while the US dollar weakened. In commodities, the prospect of accelerated rate cuts supported gold's rally, while crude oil prices fell towards \$70/bbl.

US equity markets continued their upward trajectory in Q4, albeit not without challenges. Trump's resounding US election victory in November buoyed markets, sending equities and the US Dollar higher. Sovereign bonds, however, extended their struggles despite further rate cuts, as hawkish interpretations-particularly from the Fed's December meeting kept yields elevated.

Performance review

Against this backdrop, Man TargetRisk returned 6.52%¹ over the period.

In the first quarter stocks were the top performing asset class. Japanese index positions drove gains, as the Nikkei 225 Index had its best quarterly performance since Q2 2009, surpassing the 1989 high in the process. US indices added to gains with the S&P 500 posting a double-digit return for a second consecutive quarter as the AI-driven rally continued unabated. Positions in the Hang Seng and South African All Share indices weighed on performance. Credit was further accretive, with high yield and investment grade indices gaining in both the US and Europe as yields compressed.

Inflation-sensitive assets contributed positively, as commodities were buoyed by price increases across oil and metal markets. Inflation linked bonds finished marginally in the red.

Bonds were the sole detractor on the quarter as signs of inflation persistence and reluctance from central banks led the market to reprice the timing and number of rate cuts. US treasuries struggled across tenors, while European positions fared little better with the exception of Italian 10-year bonds, which ended the quarter flat.

Exposure increased gradually over the quarter as overlay activity remained muted. The correlation and the volatility overlays were inactive across all asset classes. The momentum overlay was active in commodities, bonds, and equities, however, subsequently disengaged by quarter end.

In the second quarter, Inflation-sensitive assets contributed the most as commodities benefited from rallying prices across metals markets. Inflation-linked bonds weighed on performance as losses from European positions more than offset profits from US ones.

Stocks were also accretive led by US positions, as the S&P 500 posted its third consecutive quarterly gain. Gains were compounded by profits from positions in the H-Shares and Hang Seng indices. European positions struggled, with the CAC 40 index a notable underperformer. Credit trading was flat as gains from US HY and IG CDX were matched by losses from European IG and HY positions. Bonds weighed on performance, as investors priced in a more gradual cycle of rate cuts. Longer-dated US treasuries and 10-year Japanese bonds were the top detractors, while European positions also struggled.

Exposure fluctuated throughout the quarter, finishing the quarter in line with where it started. The correlation overlay partially activated and de-activated over the quarter. The momentum overlay was active in both bonds and inflation, although reduced its de-gear signal as the quarter drew to a close. The volatility overlay was active in commodities, however, subsequently disengaged by quarter end.

In the third quarter, performance was positive, with gains from bonds and credit outweighing losses in stocks, while inflation-sensitive assets were mixed.

¹ Performance data is shown for Man AHL TargetRisk D USD share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.70% management fees plus other fees. Other share classes may charge higher fees.

Man TargetRisk – Annual Report Commentary (continued)

Bonds contributed the most, with longer-dated US Treasuries leading gains. Italian 10-year bonds also performed well, as investors favoured Italian BTPs for higher yields and relative political stability. No markets detracted over the quarter.

Credit was profitable, with high-yield CDX positions in the US and Europe driving gains. Stocks detracted, as the 'V-shaped' rebound in August negatively affected positioning. Japanese indices were the main detractors, while US and European positions also struggled. Losses were offset by gains from positions in the S&P TSX 60 and Chinese indices.

Inflation assets were mixed, with gains from inflation-linked bonds offset by losses in commodities.

The overlays were active throughout the quarter. The volatility overlay triggered at the portfolio level and in some sectors during August but disengaged by September. The momentum overlay was active in both commodities and stocks, while the correlation overlay remained inactive.

In the fourth quarter, performance was negative with losses across all asset classes except credit.

Bonds were the largest detractor, with longer-dated US treasuries driving losses. Other markets fared little better, generating no offsetting gains.

Inflation-sensitive assets were negative with losses from both commodities and inflation linked bonds.

Stocks compounded losses with positions in the Swiss and Korean indices the principal culprits. Losses were partially offset by gains from US and Japanese indices, as both markets recorded all-time highs. Credit trading was accretive, led by high-yield positions in the US and Europe.

Exposure was stable for much of the quarter until December, when the correlation overlay triggered and fully engaged, reducing exposure materially. The momentum overlay was active across in both bonds and equities, increasing its de-gear signal in the former during December. The volatility overlays remained inactive.

Future outlook

As we stand at the threshold of 2025, our philosophy remains steadfast in these unknown times, grounded in the understanding that markets are not to be timed or forecasted with precision but navigated with a balanced, diversified approach centred around risk management. Our strategy, embodied in the AHL TargetRisk Programme, isn't about predicting whether bonds will outpace equities, if inflation will surge, or if a recession looms. Instead, it's about maintaining a well-rounded portfolio nimble enough to react systematically to changing market environments.

TargetRisk, backed by years of scientific research and experience, offers a globally balanced portfolio designed to thrive in various market conditions. Its efficient and robust trading platform ensures low costs, while a strategic emphasis on downside protection mitigates risks. The Programme leverages proprietary systematic overlays, which operate to adjust to market conditions swiftly. These are designed not only to enhance long-term performance but also aim to preserve capital by limiting portfolio drawdowns.

While the future remains shrouded in uncertainty, we continue to focus on what we can control: our approach to risk management. The challenges we face, be it inflation pressures, potential market shifts, or health crises, underline the need for active, systematic risk management as a cornerstone of our portfolio strategy.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man European Mid-Cap Equity Alternative – Annual Report Commentary

Market summary

European equities were positive in 2024, though performance was muted compared to that of the US. While markets were boosted by strong corporate earnings, an uptick in M&A activity, the promise of interest rate cuts, and optimism around AI and its diffusion to other sectors, political uncertainty in both France and Germany weighed on sentiment, as did the uncertainty going to the US presidential election and the fears of trade wars after the Donald Trump won.

Performance review

Against this backdrop, Man European Mid-Cap Equity Alternative (the 'fund') returned 3.44%¹ net of fees over the period driven by an above average earnings seasons hit rates.

The top three contributors to returns in 2024 were from short positions in: a British staffing company, a Finnish listed real estate company, and a European-listed truck OEM. The British staffing company short underperformed following disappointing earnings. The Finnish real estate company underperformed due to balance sheet concerns early in the first half. Lastly, the European-listed truck OEM underperformed following disappointing results and weak peer pricing outlooks for the second half of the year.

Detractors in this year were primarily on the short of the portfolio. These included a UK retailer that outperformed after a slight Q2 earnings beat was well received in a backdrop of sector headwind. A Swedish business services company and a German machinery company both re-rated after delivering better margins than expected, despite headwinds on orders and revenues.

Future outlook

Following the US election, we have sharpened our pencils on potential tariff risks and adapted exposures accordingly, although it remains limited for most companies due to local production footprints. We are increasingly optimistic about the prospects for economically sensitive stocks due to negative market sentiment and signs of gradual stabilization in certain cyclical segments, particularly construction. December ended with further improvements in the US ISM, notably in the new orders component. That said, we continue to keep a balanced exposure to the market as we are finding several new opportunities to bet against economically sensitive stocks facing increasing challenges, in sectors such as IT services and certain industrial areas. We remain mindful of political risks in Europe, particularly the French budget and the upcoming German elections on February 23rd.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. They are intended to provide a comparative indication of particular asset classes, investment sectors, or financial markets more widely ("market backdrop"). Man Global Emerging Markets Debt Total Return – Annual Report Commentary

Market summary

The year 2024 was shaped by a confluence of key themes, including elections, geopolitical tensions, continued repricing of growth and inflation risks, and evolving monetary policy expectations. A major challenge for EM stemmed from the U.S. Federal Reserve ('Fed'), which delayed rate cuts and priced in a shallower easing cycle than the market had initially anticipated. This dynamic contributed to an 8% appreciation of the USD over the year. In core rates, U.S. Treasury (UST) 10-year yields ended the year at 4.68%, up 0.69% year-on-year (YoY). Yields ranged from a high of 4.70% on April 25, driven by robust economic activity growth and opinion polls suggesting a likely Republican victory in the November election, to a low of 3.62% on September 16, as weaker economic data and a narrowing in the polls influenced market sentiment.

Emerging Markets Debt (EMD), returned 1.6%, driven by the Emerging Markets (EM) sovereign and quasi-sovereign hard currency (HC) debt segment which gained 5.7%, which contrasted with EM sovereign local currency (LC) which lost -2.4%.

Positive performance in HC was driven by a 6.0% spread return, supported by sovereign spread tightening and carry, partially offset by -0.3% Treasury losses due to rising core yields. The J.P. Morgan Emerging Markets Bond Index Global ("EMBIG")'s average yield increased by 0.38% year-on-year (YoY) to 7.59%, while the average sovereign spread (adjusted for Venezuela's inclusion) tightened significantly by 0.83% YoY to 2.36%. The High Yield ("HY") segment significantly outperformed, returning 13.5% compared to Investment Grade's ("IG") modest 0.4% gain. This outperformance was fueled by stronger spread returns and the absence of Treasury losses, thanks to HY's shorter duration. HY spreads tightened by 0.68% to 5.79%, while IG spreads closed unchanged YoY at 1.19%. Performance by rating category underscored this dynamic, with CCC-C rated debt delivering a +58.9% return, while BBB-rated (-0.1%) and NR debt (-3.3%) segments underperformed.

LC losses were driven by currency (FX) depreciation (-7.3%), the increased in local yields (-0.3%), and only partially offset by interest carry (+5.6%). The USD rally exerted significant pressure on EM currencies. EM local yields rose by 0.20% YoY to 6.39% as markets recalibrated expectations for rate cuts in both the US and EM. Nevertheless, local bonds outperformed core rates, with the spread to 5-year UST narrowing by 0.33% to 2.01%. Country wise, South Africa (+13.7%) and the Dominican Republic (+7.5%) were top performers, as strong interest carry and price returns outweighed the drag from currency depreciation. Conversely, Brazil (-22.2%), Mexico (-15.5%), and Colombia (-10.9%) were the weakest performers, hit by a combination of fiscal imbalances and idiosyncratic risks.

EM bond funds continued to lose assets under management (AUM) with outflows reaching USD 29.9bn in 2024, across HC (-USD18.6bn) and LC (-USD11.4 bn), for the third consecutive year.

EM central banks delivered fewer rate cuts in 2024 than markets had initially anticipated. This was primarily due to the U.S. Fed delaying its own rate cuts and a slower-than-expected disinflation process in many EM regions. As 2025 approached, policy divergence among EM central banks became more pronounced. Those more sensitive to Fed policy and currency pressures either delayed or reversed their easing cycles, while others, driven by domestic conditions, pursued further rate cuts.

Geopolitical risks, including the ongoing conflicts in Ukraine and the Middle East, and EM elections added further complexity in 2024. In Turkey, the March municipal elections saw the opposition exceed expectations, with President Erdogan's AKP falling to second place for the first time since 2002. Following the vote, economic policy became the primary focus, as no further elections are scheduled until 2028. In South Africa, the ANC lost its 30-year parliamentary majority in May, creating prolonged uncertainty as delays in forming President Cyril Ramaphosa's coalition cabinet fueled political unease. In Mexico, Claudia Sheinbaum's unexpectedly strong victory in June, representing the ruling party, led markets to price in risks associated with AMLO's reform agenda. Meanwhile, in India, elections held the same month forced Prime Minister Modi's government into a coalition after it failed to secure a parliamentary majority, adding to market volatility. In Mozambique, severe post-election unrest was experienced after opposition leader Venâncio Mondlane rejected the October 9 results. Protests resulted in over 278 deaths and significant economic disruption. In Romania, political instability deepened after the Constitutional Court annulled the first round of presidential elections in December due to widespread irregularities, mandating a re-run.

Performance Review

Against this backdrop, Man Global Emerging Markets Debt Total Return delivered a 3.38%¹ return over the period.

Performance was primarily driven by interest carry from cash exposures, short CE positions, and long UST exposure in November. These gains were only partially offset by losses from the short credit spread DWE exposure, as EM sovereign spreads tightened in 2024.

The largest individual contributors to returns were short positions in MXN, closed in late October after weakening 17.8% year-to-date (YTD), BRL, closed in mid-August after a 15.0% YTD weakening, CLP, closed in March after a 9.7% YTD decline, then reopened in June for an additional 2.2% gain, and COP, depreciated 14.3% YTD. Additionally, the short credit spread DWE to Brazil contributed positively, as spreads widened by 0.85% in 2024.

The largest detractors were short credit spread positions in South Africa and Türkiye, where CDS spreads tightened by 0.12% and 0.20%, respectively, and in CDX-EM, where a 0.05% spread widening failed to offset the negative cost of carry.

¹ Performance data is shown for Man Global Emerging Markets Debt Total Return D USD share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.73% management fees plus other fees. Other share classes may charge higher fees.

Man Global Emerging Markets Debt Total Return – Annual Report Commentary (continued)

Future outlook

With policy action in the US and China likely to set the tone in the coming months, the EM asset class faces several uncertainties over the coming quarter.

In HC, high absolute yield levels obscure tight valuations, with future gains dependent on further declines in UST yields. The JPM EMBIG spread is at 2.97%, 0.22% tighter in 2024 and near historically tight levels after absorbing much of the repricing in UST. However, this figure understates the true extent of tightening due to Venezuela's inclusion in the benchmark in 2024Q2. Excluding Venezuela, the EMBIG spread is 2.36%, 0.83% tighter in 2024 and at historical lows. Risks are skewed toward wider spreads, driven by a global growth slowdown despite China's stimulus efforts, increased volatility in core rates, geopolitical tensions, and the risk of a trade war, raising the likelihood of a hard landing. Additionally, with slowing nominal growth and elevated interest rates, most EM economies are expected to see rising public debt ratios in 2025 after declines in 2022–23.

In LC, real yields for JPM GBI-EM countries remain attractive in many cases, but the overall yield differential to U.S. yields, at 2.01% (0.33% tighter in 2024), is at historical lows, offering minimal cushion against further U.S. yield increases. Tariffs and currency depreciation have reduced the scope for future EM monetary easing, leading to less synchronized policy actions as central banks' balance changing U.S. financial conditions, domestic stability concerns, and varying trade exposures.

EM currencies valuations have selectively improved in recent months, with current account balances reaching equilibrium for the JPM GBI-EM index countries. EM currencies weakened 7.3% in nominal terms in 2024, helping reduce the overvaluation of some higher yielding currencies amid lower EM inflation. However, valuations may become even more attractive before rebounding, as risk sentiment is likely to deteriorate in early 2025, driven by uncertainty over the priorities and timeframes of the incoming U.S. administration.

Man Innovation Equity Alternative – Annual Report Commentary

Market summary

Equity markets were strong in 2024 despite concerns about the timing and the scale of potential rate cuts and geopolitical uncertainty. The first few months of the year saw strong economic data, particularly out of the US, saw rate cut expectations fall significantly. However, the outlook improved later in the year as May and June saw the US post two successive lower-than-expected CPI data reports. The Fed's decision to cut interest rates in September boosted hopes of a soft landing in the US, though December saw the Fed assume a more hawkish tone on the path of interest rates, triggering a sell-off in the markets.

Performance review

Against this backdrop, Man Innovation Equity Alternative delivered a 8.58%¹ return over the period.

At the stock level, the Fund's top contributors were long positions in Alaska Airlines, Fair Isaac, and PetIQ. Alaska Airlines had a strong run after positive commentary on its Q3 earnings calls around the pricing environment and after raising its expectations for fourth quarter in December as a result of strong air travel demand following the US election. Fair Isaac, a consumer credit ratings provider, had a strong run in 2024, benefitting from the company's pricing initiatives on their mortgage product. In the last few years, they have increased mortgage pricing ten-fold with no impact to volumes. Lastly, PetIQ, the provider of pet supplements performed well as fundamentals for pet ownership in the US re-accelerated. The stock was trading at a much lower price compared to similar companies and was bought by a private equity firm, which offered 40% more than the current price in an all-cash deal.

The Fund's top detractor for the year was a long position in American Airlines. Although there are some very encouraging signs of improved supply trends for the industry at the beginning of the year, industry capacity re-accelerated in the second quarter which led to a softer than expected price environment. Other detractors to performance were short positions in domestically focused consumer cyclical (a category of stocks that rely heavily on the business cycle and economic conditions) names which included travel and leisure names.

Future outlook

Whilst our overall exposures have remained fairly stable, we have increased our exposure to consumer cyclicals with spending holding up well in the holiday period. We have also reduced our net short exposure to consumer staples names given the weakness towards the end of the year. At current valuations, we are starting to find some opportunities on the long side given low expectations for the group.

Going forward, we do think that the market environment remains constructive for stock picking strategies such as ours. Whilst the Fed is likely to continue to lower rates this year, a return to the ultra-low rates that dominated so much of the last decade seems highly unlikely. At the same time, the new administration with their policies on protectionism and deregulation will naturally create winners and losers which is something that we will look to exploit in the fund.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. They are intended to provide a comparative indication of particular asset classes, investment sectors, or financial markets more widely ("market backdrop"). Man Alternative Style Risk Premia – Annual Report Commentary

Market summary

The first quarter of 2024 began with the S&P 500 hitting an all-time high during January, as most major indices rallied. Tensions in the Middle East remained high, leading to the oil price rising in January. Global equities were positive overall in February, S&P and Nasdaq indices ending the month at new all-time highs once again. While January inflation numbers were stronger than anticipated in the US which reduced investors' expectations for FED interest rate cuts over 2024 further. Equities continued their rally from February with modest gains in March. The Federal Reserve left its target rate range unchanged for the fifth consecutive meeting, while its updated interest rate projections reiterated three rate cuts in 2024.

The second quarter saw equity markets stumble, breaking the streak of consecutive positive months. A combination of hot US inflation data and a first quarter US GDP print that while weak on first glance, showed resilient private demand, fuelled market fears that central banks will not ease monetary policy as quickly as previously hoped. Yields increased across most of the Treasury curve as higher than expected inflation data lowered the forecasts for the total number of Federal Reserve interest rate cuts this year. May saw a reversal as equities rallied while yields declined across the curve. Strong earnings growth and optimistic inflation data were the main drivers. June saw a traditional risk on environment as equities rose and yields fell. The MSCI World equities index recorded its seventh positive month out of the last eight. Commodities continued to experience mixed performance. In Energies, oil was the strongest positive performer while Dutch Natural Gas detracted.

Equities and bonds performed well in the third quarter, against a back drop of a surprise in inflation in July, lower than expected US job report and a 50bps rate cut by the FED in September. Key geopolitical events included Donald Trump surviving an assassination attempt, Joe Biden withdrawing from the U.S. presidential race, Labour's victory in the UK general election, and a weak showing for France's National Rally. In July, Bank of Japan hiked the interest rate to 0.25%, the highest level since 2008 financial crisis, which led to the JPY carry trade unwind and Yen rallying. At the start of August, Nikkei index was also then down -12.4% and US stocks experienced worst on-day decline in 2-year, but was then quickly recovered, fuelled by Fed's rate cut signalling. China announced robust stimulus plans in September to inject more funds, lower borrowing costs and ease mortgage burdens. Commodities performance mixed. Commodities continued its mixed run of performance. In energies, Oil detracted since Saudi Arabia signalled it intends to abandon its target price of \$100 a barrel and increase production in December in order to increase its market share. Elsewhere, US Natural Gas was strong with geopolitical tension concerns in August and Florida hurricane Helene in September. Gold remained strong, benefiting from persistent market volatility and inflation concerns.

The fourth quarter began with equity weakness on poor US large cap tech earnings, followed by a strong rally following Trump presidency? Fed cut rate twice (25bps each) in November and December, and signalled two rate cuts in 2025, which reduced from the previous four cut expectations amid stickier inflation. The US dollar continued to appreciate in December against most major currency markets driven by the re-pricing of US treasury yields. UK gilts also climbed with the new proposed budget by the UK Government, as well as the poor economic data and higher inflation. Oil price rose with Middle East uncertainty around the US election. Natural gas also rallied with the supply concerns. Cryptocurrencies hit all-time highs on optimism around presidential support.

Performance review

Against this backdrop, Man Alternative Risk Premia Fund returned 7.27%¹ over the period. Gains came from both Equity strategies and Macro strategies.

Equity Market Neutral dominated performance within Equity strategies as Low Beta and Equity Size produced smaller and offsetting gains and losses in the first half of the year. Equity Market Neutral gains came in 7 of 10 model pillars. Risk-neutralized value was the largest contributor. Informed investor and generic momentum also had meaningful contributions. Whereas factor selection lost the most and alternative and traditional forms of momentum also detracted. Equity Market Neutral models performed well across regions. Models performed the best in Japan. Within the Low Beta portfolio, roughly two-thirds of the gains came from the low beta factor and the remainder from its small net market sensitivity. Equity Size's loss was relatively small when considering the strong outperformance of larger cap indices relative to smaller ones.

In the first half of the year about half of the Macro strategies' gain came from Trend while all other strategies contributed positively as well: Seasonality, Volatility, Fixed income and Currencies. Trend gains came almost entirely from stock indices as smaller gains in currencies were offset by similarly sized losses in bonds. The Volatility strategy generated gains as overall stock market volatility, as measured by the VIX index, was in a narrow range for much of the year. Fixed Income gains came solely from the directional yield curve sub-strategy where short positioning in the U.S. and Germany throughout the year drove profits.

The third quarter saw negative returns driven by the Macro strategies, offsetting gains from Equity strategies, while Macro strategies declined across the board, with losses concentrated in Trend where six of the seven asset sectors were unprofitable. In contrast, Equity Strategies gained across all the sub-strategies, with Equity Market Neutral the largest contributor. Equity Market Neutral returns were driven by the statistical arbitrage strategies. Low Beta stocks well outperformed higher beta stocks over the period, however gains were almost halved by losses from risk overlays within the Low Beta strategy.

¹ Performance data is shown for Man Active Balanced I H EUR share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.12% management fees plus other fees. Other share classes may charge higher fees.

Man Alternative Style Risk Premia – Annual Report Commentary (continued)

The fund was down in the fourth quarter, primarily driven by challenging performance in October, with both Equity and Macro strategies detracting. All Equity strategies posted modest losses. Cyclical quality stocks in the Equity Size portfolio underperformed, outweighing gains from capitalization. Within Equity Market Neutral, gains in factor selection and informed investor alpha pillars were offset by losses in alternative momentum, ESG, and reversal models. In mid-December, the risk overlay was activated to mitigate losses stemming from the underperformance of low-beta stocks within the Low Beta strategy. Macro strategies also saw small losses, with Seasonality impacted by short U.S. dollar exposures and Trend suffering from losses across bonds, interest rates, stock indices, and energy markets.

Future outlook

Based on the factors which we have considered above, we do not have cause for concern which would otherwise prevent the Sub-Fund from operating as a viable economic entity during the ordinary course of business over the next 12 months, following the year-end reporting date.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Man Active Balanced – Annual Report Commentary

Market summary

With 2024 drawing to a close, we reflect on a year marked by significantly volatility and notable gains. The latter manifested in equity markets as strong US economic prints gave risk assets in the region a new lease of life. However, a strong global economy painted a more challenging picture for sovereign bond markets as persistent inflationary fears led a more cautionary response from central banks than expected.

The S&P 500 frequently reached record highs, buoyed by optimism around artificial intelligence and strong corporate earnings, particularly among tech giants dubbed the "Magnificent 7". However, the rally was notably narrow, with mega-cap stocks driving much of the performance, leading to concerns about market breadth. Volatility spiked mid-year, notably in July and August, as geopolitical tensions and monetary policy shifts triggered risk-off moves. Despite this, equities managed to recover quickly, with US markets continuing higher. A hawkish FOMC meeting mid-December put a slight dampener on equity markets at the end of the year.

Monetary policy divergence was a recurring theme as central banks navigated the complex environment of robust growth and inflation. The Fed initially delayed rate cuts, with expectations shifting repeatedly due to inflation data and economic indicators. In contrast, the ECB adopted a more aggressive stance by cutting rates in response to subdued growth in the Euro Area.

Japan's policy adjustments, including rate hikes, had significant repercussions on the yen carry trade, contributing to volatility in Japanese and global markets. Meanwhile, the Bank of Canada's rate cuts provided a counterpoint to the tightening stance of other major central banks.

Performance review

Against this backdrop, Man Active Balanced delivered a 4.09%¹ return over the period and has underperformed the benchmark².

The "Magnificent Seven" (Mag 7), remained the primary catalyst for equity markets in 2024. Leading the charge in the artificial intelligence revolution, these companies continued to capture significant investor interest. By mid-2024, they collectively reached a remarkable valuation of \$16 trillion and accounted for almost 60% of the S&P 500's returns.

Bond markets struggled, shaped by the interplay of inflation expectations, central bank actions, and geopolitical developments. This reflected broader uncertainty in global financial markets where AI was less influential. The initial rally in bonds, sparked by the Federal Reserve's dovish pivot in October 2023, reflected optimism for rate cuts in 2024, boosting the Bloomberg Global Bond Aggregate Index.

However, as the new year unfolded, robust economic data and inflation surprises began to alter market expectations. Delays to anticipated rate cuts caused bond prices to fall. This was further complicated in March, when strong manufacturing and jobs data led to a hawkish repricing and a sell-off in US Treasuries and European sovereign bonds. Despite some positive momentum in May, driven by easing inflation and supportive comments from Fed Chair Powell, stronger inflation data later reversed these gains, particularly affecting European and Japanese bonds. By June, however, the narrative shifted again as the ECB delivered its first rate cut since the pandemic, signalling a divergence in global monetary policies.

Throughout this period, risk management overlay activity was generally low. As a result, the Fund maintained its level of gross exposure and benefitted from the equity market rally. One notable exception was in May, when the correlation and volatility management tools activated amid stronger inflation data, which stalled the market rally and put pressure on sovereign bond yields, particularly in Europe. Japanese bonds also experienced a sell-off, with 10-year yields rising above 1% for the first time since 2012.

These overlay activities however were short-lived, as by June, exposure edged back up with the full disengagement of the correlation and volatility overlays. The momentum overlay saw limited activities in fixed income.

A weaker-than-expected US economic data print, combined with a relatively hawkish BoJ, led to an unwind of the colossal yen carry trade at the beginning of August. This spiked market risk indicators and generated significant moves across global equity indices. The Nikkei was at the epicentre of the volatility, with the index notching its biggest daily drop since 1987. The Cboe Volatility Index (VIX) recorded its biggest ever one-day spike, exceeding even those during the 2008 financial crisis and the March 2020 episode. However, compared with previous volatility spikes, the VIX dropped and the market normalised in record time.

Naturally, the volatility shock triggered TargetRisk's volatility overlay. The portfolio quickly reduced leverage to mitigate against the impact of any further drawdowns, cutting exposures by around half in the first two weeks of August.

Man Active Balanced – Annual Report Commentary (continued)

In this instance, reacting so quickly to the changing market conditions was to the strategy's detriment. Still, it is important to consider the counterfactual in which the selloff in risk assets had extended; if we had not seen such an extraordinary V-shaped recovery (which evolved over days rather than the weeks of February-April 2020), the Fund would have been positioned to mitigate the negative impact from the market volatility. Over the long run, investors who are sensitive to drawdowns are better off with the added protection the overlays have to offer – particularly when equity markets selloff (e.g. 2018, 2020 and 2022).

Once again, polls understated the depth of support for President-elect Donald Trump. He achieved a remarkable comeback, gaining ground in 48 out of 50 states. This included the critical Midwestern "blue wall" states. He stands to mark his return to the White House with an "America First" agenda.

Although Trump declared the use of tariffs to execute policy, US assets rallied. The S&P 500 reached another all-time high, and the US dollar continued to strengthen. European sovereigns advanced as markets expected faster rate cuts from the European Central Bank, while the euro posted its biggest monthly decline in 18 months.

Exposure remained relatively stable until November, when the momentum de-gear signal was activated in bonds. As bonds rallied again in December, the overlay re-gear, only for the correlation overlay to engage at the portfolio level and cut exposures by around half.

The Fund's overlay activity was well-timed, softening the blow from the market losses experienced following a hawkish FOMC meeting in mid-December. The Fund finished the period marginally in the black, with stocks able to capitalise on the equity market optimism earlier in the period. Bonds struggled as hawkish sentiment pushed yields higher.

Future outlook

Forecasting market returns is notoriously challenging, and it is not our primary focus. Instead, we emphasise risk management because risk is more predictable. While we strive to assess the impact of historical and hypothetical scenarios on our portfolio, we believe that basing our portfolio construction on the targeting risk rather than the forecasting returns leads to better outcomes.

We remain optimistic about the Fund. We believe our active approach to risk management and dynamic positioning will help us navigate the changing economic environment. Should rates come down again, we could see an additional tailwind for the portfolio. Our analysis of the four most recent rate-cutting cycles quantifies the potential outperformance. That said, markets are unpredictable, and a resurgence in inflation is always possible.

Our philosophy is steadfast: markets should not be timed or predicted with precision but navigated through a balanced, diversified approach centred around risk management. We designed the Fund with the aim to be robust to whether bonds outpace equities, whether inflation surges, or whether recession strikes. It maintains a well-rounded portfolio that can systematically respond to changing market conditions.

The Fund, which is built on years of scientific research and experience, offers investors a way to access traditional market returns in a risk-conscious, but non-limited way. It is a globally balanced portfolio that has been designed with resilience in mind, aiming to thrive across a plethora of market conditions. Its efficient and robust trading platform ensures low costs, while a strategic emphasis on downside protection mitigates risks. The Programme utilises proprietary systematic overlays, ensuring a dynamic and swift reaction to prevailing market conditions. These are designed not only to enhance long-term performance but also aim to preserve capital by limiting portfolio drawdowns.

As we look forward to 2025 and the uncertainties that lie ahead, we remain steadfast in our optimistic outlook, buoyed by the resilience shown by global markets over recent years. We would like to thank our investors for their trust and investment, and leave with one final thought, a quote from Niels Bohr, which made an appearance in "Oppenheimer", one of the most successful movies of 2024: "Prediction is very difficult, especially if it's about the future."

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man High Yield Opportunities and Man High Yield Opportunities DE – Annual Report Commentary

Market summary

2024 was an eventful year for risk assets, punctuated by increasing geopolitical affairs and market volatility, amidst a series of global rate cuts as policy makers seemingly engineered the coveted soft landing.

At the onset, sticky inflation dominated the narrative as developed economies continued to post strong economic data. This coupled with high energy prices diminished rate cut expectations, particularly in the US, hurting government bonds.

June marked a significant shift, as the European Central Bank cut rates by 0.25% with the Bank of England also trimming their base rate by 0.25% for the first time in the following month. However, perhaps the most notable move in monetary policy, was the Federal Reserve's 0.5% rate cut in September, sparking a risk-on rally at the end of Q3. The long-awaited cut was the first of three over 2024, with December's final 0.25% cut being of a much more hawkish nature, after two consecutive upticks in CPI serving as a reminder that inflation had not quite been tamed.

Changing political regimes and geopolitical affairs also played a key role in shaping markets over the year. Escalations in the Middle East continued and nearly 50% of the global population headed for the polls in 2024 - which saw a record 60+ general elections. A new era for British politics began as the UK ushered in its first Labour government in 14 years, while Donald Trump's election victory and the Republican sweep sparked a significant risk-on rally across the Atlantic. Central European politics was not short of its own volatility as French Prime Minister Michel Barnier's government collapsed after just three months while German Chancellor Olaf Scholz lost his own vote of confidence at the back end of the year.

Against this backdrop, it was a positive year for global high yield with defaults low and the significant carry resulting in a strong return. Bond yield spreads narrowed across the board, with overall levels dropping from 3.85% to 3.08%. In European high-yield markets, spreads fell from 3.96% to 3.11%, while in US high-yield markets, they decreased from 3.39% to 2.92%. This tightening was significant, especially considering spreads were already relatively low following Trump's election victory. From a credit ratings perspective, lower quality credit outperformed, benefiting from the robust growth environment, however this was not uniform across markets with segments of the European market under pressure from political instability and slowing growth. Sector wise, real estate and financials were the main winners while capital goods and automotives lagged.

Performance review

Man High Yield Opportunities DE

Against this backdrop, Man High Yield Opportunities DE returned 13.2%¹ over the period, outperforming the benchmark, which returned 7.5%².

In terms of contributions, the majority of total returns were driven by sector and security selection decisions which is what investors should expect for this fund. Over the period, duration marginally added to returns.

Key contributors

As most of our investors will know, idiosyncratic decisions are the driving force behind active returns for our portfolios. The main contributors included:

- Luxembourg, Real Estate: 0.86%
- Germany, Financials: 0.80%
- Luxembourg, Consumer Discretionary: 0.77%
- UK, Financials: 0.47%
- Mexico, Communication Services: 0.44%

Key detractors

- Chile, Communication Services: -0.49%
- US, Financials: -0.20%
- US, Financials: -0.19%
- US, Communication Services: -0.17%
- UK, Utilities: -0.13%

Man High Yield Opportunities

Against this backdrop, Man High Yield Opportunities returned 11.02%³ over the period, outperforming the benchmark, which returned 7.5%⁴.

¹ Performance data is shown for Man High Yield Opportunities DE I EUR share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 0.82% management fees plus other fees. Other share classes may charge higher fees.

- Ireland, Materials: -0.16%

Outlook

With a focus on 2025, it remains to be seen how policies will shape up once the Trump administration is in place, but we are expecting a more inflationary environment with steeper curves based on previous pronouncements and campaign promises. We remain a bit concerned that this could mean that the Fed could pivot to a holding pattern in terms of rate cuts which would put pressure on more vulnerable areas of the corporate market as 'higher for longer' typically equates to rising defaults in sub-investment grade credit.

With this being said, there are several factors which may keep bankruptcies in check. Firstly, a resilient global economy, and in particular US economy, may give issuers the revenue streams they require to offset higher borrowing costs. Secondly, fundamentals remain robust – both leverage and interest rate coverage ratios are at mid-cycle levels. Finally, the quality of the market has been improving over the years, as more highly indebted firms opt to finance themselves in the leveraged loan markets, which are experiencing higher levels of default than fixed-rate high yield for the first time ever.

Another factor which we believe is not being as widely discussed as it should be, is the impact of potential US immigration policies on future employment or growth. Immigration has been a major driver behind the growth of the US labour force and stricter measures related to this may lead to potential headwinds for overall growth in the coming 12 months.

Without clarity on US trade policy, it's hard to have conviction on the outlook for spreads. What remains clear however, is there is very little cushion for things to go wrong with spreads historically tight.

We do not necessarily see this as a bullish environment for pure credit beta and given the current level of spreads, active management in the high yield space will be crucial. A significant proportion of the high yield market, particularly the BB space, trades at a spread of below 3%. This will be an area that we will continue to avoid, given poor convexity. However, this masks the idiosyncratic opportunities which remain prevalent at spread cohorts above these levels, particularly in small- and medium-sized issuers. In particular, the US market remains priced for perfection.

With this in mind, we continue to favour Europe, with a focus on the shorter-dated part of the market. All-in yields remain elevated compared to post-Global Financial Crisis (GFC) levels and as the duration of the market has dropped, the overall breakeven of the asset class (the amount of spread or yield widening required to lose money on a forward-looking 12-month basis) is at a high level compared to history. In particular, we are remaining active in stressed refinancing and liability management exercises (LME) with a specific focus on business models with hard assets.

All-in all, similar themes seen in 2024 look poised to dictate how 2025 will play out. Growth is resilient in many markets and the battle against inflation looks to be resurging. We are positioning in the more value-oriented parts of the market consistent with our bottom-up investment approach where we are trying to capture high yield bonds trading at significant discounts to underlying fundamentals.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Event Driven Alternative – Annual Report Commentary

Market summary

Global M&A activity rebounded in 2024, signalling a turnaround for dealmaking globally. North America captured a record share of global M&A volume, while the EMEA region posted a double-digit increase in activity.

The US Federal Reserve's rate cut in September brought a cautious sense of optimism to the market, as stabilized interest rates and slowing inflation provided a more favourable environment for private equity (PE) activity. Armed with record levels of dry powder, financial sponsors became increasingly active, driving take-private deals to historic highs. Valuation gaps began to narrow, supported by more attractive financing terms offered by both traditional lenders and private credit funds. Improving macroeconomic conditions, combined with stronger equity markets, bolstered C-suite confidence and encouraged greater use of stock as a transactional currency.

Strategic M&A took centre stage in 2024 as corporates focused on expanding market share and boosting profitability through scale and synergy realisation. At the same time, a growing emphasis on simplification saw many companies pursue separations as a means to reduce leverage and unlock shareholder value. Financial sponsors also played a key role, aggressively deploying capital, though sponsor sales remained below historical norms. Encouragingly, exits began to pick up as portfolio hold times reached recent highs.

Performance review

Against this backdrop, Man Event Driven Alternative delivered a net return of 0.31¹%.

Despite some positive aspects, it was a challenging year for merger arbitrage. The strategy grappled with an unusually high rate of deal breaks and limited opportunities for substantial gains. Notably, there were virtually no "home run" trades or significant bidding wars throughout the year. Regulatory scrutiny of mergers also intensified especially among deals that received second requests from the Federal Trade Commission ('FTC') triggering in-depth reviews. The agency ultimately moved to block approximately 30% of announced deals in the US.

We successfully avoided many of the deal breaks announced throughout the year; however, we were impacted by the termination of the planned \$8.5 billion merger between Capri Holdings and Tapestry. The companies mutually agreed to abandon the deal, citing the unlikelihood of securing the necessary US regulatory approvals after the FTC blocked the merger and a US judge ruled against it. In addition, we witnessed the collapse of the merger between China Traditional Chinese Medicine and Sinopharm in October. The deal fell through, leaving the market uncertain about the exact reasons behind its failure.

Throughout 2024, we continued to apply our unconstrained, bottom-up approach, leveraging a highly consistent, disciplined, and scalable investment process that has been successfully implemented since 2019. In terms of performance, 2024 marked the Strategy's fifth consecutive year of positive results, with no down years since inception.

We maintained our focus on small and mid-cap deals, with the majority of regional exposure concentrated in North America. In the second half of the year, we progressively increased exposure to Europe. Throughout the year, the team carefully added to gross exposure, seeking to capitalize on attractive spreads as they emerged.

Future outlook

For over a year, M&A markets have been weighed down by uncertainty surrounding monetary policy and heightened regulatory challenges. However, as these headwinds begin to subside, the outlook for 2025 appears increasingly promising. Disruptive generational technologies are reshaping industries, sponsors are eager to deploy capital, and corporates are actively seeking transformative M&A opportunities to enhance and realign their portfolios. That said, risks remain, with volatility likely to persist as markets continue to grapple with "known unknowns" such as tariffs, geopolitical tensions, and broader macroeconomic uncertainties. The end of 2024 saw a surge in multibillion-dollar M&A activity in sectors such as advertising, building materials, and banking, as well as private equity firms reopening their check books to hunt for bargains in public markets across the US and Europe. This flurry of deal activity is generating strong momentum as we head into 2025, laying the groundwork for what could be a robust year.

We would like to thank investors for their continued support.

Man TargetRisk Moderate – Annual Report Commentary

Market summary

Economic news continued in the same vein of positivity throughout Q1 2024 as it left Q4 2023. There was no hard landing, inflation appeared tamed, and central banks around the globe were either contemplating cutting rates or, in the case of the Swiss National Bank, actually doing so. Risk assets benefitted from these effects with many indices, such as the S&P500 hitting all-time highs, powered by continued strength in the 'Magnificent Seven'. In Japan, the Nikkei also surpassed its 1989 high and the country's central bank ended its negative rate policy and scrapped yield-curve control.

Despite higher-than-expected CPI prints earlier in the quarter, Q2 saw the beginning of the highly anticipated rate cut cycle, with the ECB leading the charge with its first since the pandemic. The Fed was a notable omission here, as weaker economic data vindicated the US central bank's decision to pivot back to its higher-for-longer mantra. Despite this divergence across regions, sovereign bonds overall struggled as investors priced in fewer rate cuts over the year. On the positive side, equities continued their advance as the Magnificent 7 drove an albeit narrow rally, taking the S&P to new all-time highs. Geopolitical risk was also back in the fore as tensions in the Middle East once again flared in April. Then towards the back end of the quarter, French assets sold off following a snap legislative election called by President Macron.

Despite the material risk-off move in August, driven by fears of a US recession and the unwinding of the yen carry trade, stocks advanced over the quarter. US equities continued to appreciate while 'bazooka'-style stimulus measures from China sparked a significant rally in Chinese equities, with the Hang Seng achieving its best quarterly performance since Q2 2009. Bonds rose as investors anticipated more rapid rate cuts, while the US dollar weakened. In commodities, the prospect of accelerated rate cuts supported gold's rally, while crude oil prices fell towards \$70/bbl.

US equity markets continued their upward trajectory in Q4, albeit not without challenges. Trump's resounding US election victory in November buoyed markets, sending equities and the greenback higher. Sovereign bonds, however, extended their struggles despite further rate cuts, as hawkish interpretations-particularly from the Fed's December meeting-kept yields elevated.

Performance review

Against this backdrop, Man TargetRisk Moderate returned 3.02%¹ over the period.

In the first quarter, Stocks were the top performing asset class. Japanese index positions drove gains, as the Nikkei had its best quarterly performance since Q2 2009, surpassing the 1989 high in the process. US indices added to gains with the S&P 500 posting a double-digit return for a second consecutive quarter as the AI-driven rally continued unabated. Positions in the Hang Seng and South African All Share indices weighed on performance. Credit was further accretive, with high yield and investment grade indices gaining in both the US and Europe as yields compressed.

Inflation-sensitive assets contributed positively, as commodities were buoyed by price increases across oil and metal markets. Inflation linked bonds finished marginally in the red.

Bonds were the sole detractor on the quarter as signs of inflation persistence and reluctance from central banks led the market to reprice the timing and number of rate cuts. US treasuries struggled across tenors, while European positions fared little better with the exception of Italian 10-year bonds, which ended the quarter flat.

Exposure increased gradually over the quarter as overlay activity remained muted. The correlation and the volatility overlays were inactive across all asset classes. The momentum overlay was active in commodities, bonds, and equities, however, subsequently disengaged by quarter end.

In the second quarter, Inflation-sensitive assets contributed the most as commodities benefited from rallying prices across metals markets. Inflation-linked bonds weighed on performance as losses from European positions more than offset profits from US ones.

Stocks were also accretive led by US positions, as the S&P 500 posted its third consecutive quarterly gain. Gains were compounded by profits from positions in the H-Shares and Hang Seng indices. European positions struggled, with the CAC 40 index a notable underperformer. Credit trading was flat as gains from US HY and IG CDX were matched by losses from European IG and HY positions.

Bonds weighed on performance, as investors priced in a more gradual cycle of rate cuts. Longer-dated US treasuries and 10-year Japanese bonds were the top detractors, while European positions also struggled.

Exposure fluctuated throughout the quarter, finishing the quarter in line with where it started. The correlation overlay partially activated and de-activated over the quarter. The momentum overlay was active in both bonds and inflation, although reduced its de-gear signal as the quarter drew to a close. The volatility overlay was active in commodities, however, subsequently disengaged by quarter end.

In the third quarter, Performance was positive, with gains from bonds and credit outweighing losses in stocks, while inflation-sensitive assets were mixed.

Please consult the Prospectus or Key Investor Information Document ('KIID') for more information.

Man TargetRisk Moderate – Annual Report Commentary (continued)

Bonds contributed the most, with longer-dated US Treasuries leading gains. Italian 10-year bonds also performed well, as investors favored Italian BTPs for higher yields and relative political stability. No markets detracted over the quarter.

Credit was profitable, with high-yield CDX positions in the US and Europe driving gains. Stocks detracted, as the 'V-shaped' rebound in August negatively affected positioning. Japanese indices were the main detractors, while US and European positions also struggled. Losses were offset by gains from positions in the S&P TSX 60 and Chinese indices.

Inflation assets were mixed, with gains from inflation-linked bonds offset by losses in commodities.

The overlays were active throughout the quarter. The volatility overlay triggered at the portfolio level and in some sectors during August but disengaged by September. The momentum overlay was active in both commodities and stocks, while the correlation overlay remained inactive.

In the fourth quarter, Performance was negative with losses across all asset classes except credit.

Bonds were the largest detractor, with longer-dated US treasuries driving losses. Other markets fared little better, generating no offsetting gains.

Inflation-sensitive assets were negative with losses from both commodities and inflation linked bonds.

Stocks compounded losses with positions in the Swiss and Korean indices the principal culprits. Losses were partially offset by gains from US and Japanese indices, as both markets recorded all-time highs. Credit trading was accretive, led by high-yield positions in the US and Europe.

Exposure was stable for much of the quarter until December, when the correlation overlay triggered and fully engaged, reducing exposure materially. The momentum overlay was active across in both bonds and equities, increasing its de-gear signal in the former during December. The volatility overlays remained inactive.

Future outlook

As we stand at the threshold of 2025, our philosophy remains steadfast in these unknown times, grounded in the understanding that markets are not to be timed or forecasted with precision but navigated with a balanced, diversified approach centred around risk management. Our strategy, embodied in the AHL TargetRisk Moderate Programme, isn't about predicting whether bonds will outpace equities, if inflation will surge, or if a recession looms. Instead, it's about maintaining a well-rounded portfolio nimble enough to react systematically to changing market environments.

TargetRisk Moderate, backed by years of scientific research and experience, offers a globally balanced portfolio designed to thrive in various market conditions. Its efficient and robust trading platform ensures low costs, while a strategic emphasis on downside protection mitigates risks. The Programme leverages proprietary systematic overlays, which operate to adjust to market conditions swiftly. These are designed not only to enhance long-term performance but also aim to preserve capital by limiting portfolio drawdowns.

While the future remains shrouded in uncertainty, we continue to focus on what we can control: our approach to risk management. The challenges we face, be it inflation pressures, potential market shifts, or health crises, underline the need for active, systematic risk management as a cornerstone of our portfolio strategy.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Asia Pacific (ex-Japan) Equity Alternative – Annual Report Commentary

Market summary

MSCI Asia ex Japan ended 12% higher in 2024, the index's best return in four years, as stable global economic growth, signs of a more coordinated China policy response, and sustained momentum in AI-related stocks came together to support share prices in the region. The year started with high hopes that the U.S. Federal Reserve would change its approach by lowering interest rates, which was expected to help Asian economies. This was reflected in market predictions showing interest rates easing throughout the year. In fact, it took until September for a Fed pivot to come to fruition, as job growth in the US remained strong and inflation proved stickier-than-expected. As financial conditions remained restrictive, local trends were the main drivers of share prices over the year, with caution, followed by optimism, surrounding China's economy, and enthusiasm around the use cases for AI, being the key trends in markets.

Performance review

Against this backdrop, Man Asia Pacific (ex-Japan) Equity Alternative returned 8.38%¹ over the period. Positive absolute returns came predominately from the long book, with the top five contributors all originating in this part of the portfolio. This was driven by strong performance in financials and information technology positions in China, offsetting weakness in both long and short industrials exposures. Risk and return contributions were once again overwhelmingly dictated by idiosyncratic factors, in line with our expectations of the portfolio.

The key individual contributors to performance were:

- **Taiwan Semiconductor Manufacturing Company:** the world's largest semiconductor foundry, was the standout performer in the portfolio, spurred higher by continued demand for AI-processors. The stock benefitted from strong sales growth over the year, together with signs of greater pricing power for its chips.
- **Pro Medicus:** an Australian-based provider of healthcare imaging technology, rallied to all-time highs as after several large contract wins led to sequential earnings upgrades throughout the year. While we remain confident in the underlying business, the stock has benefitted from moves recently, up 4x higher from when we initially invested in late-2022. We took further profits on the position in November, after trimming exposure initially back in June.
- **Xiaomi:** a Chinese consumer tech and EV manufacturer, was a material contributor in the fourth quarter.

The key individual detractors to performance were:

- **Maritime transportation company:** The maritime transportation company was the main detractor, as a combination of disruption to key shipping lines, tighter industrial capacity, and tariff concerns led to a significant increase in freight rates. This provided support to the stock with company earnings and share price performance closely tied to shipping costs.
- **Parade Technologies:** an integrated circuits supplier for consumer electronics, suffered during the first quarter on concerns around market share losses, despite a positive backdrop for the global tech sector.
- **Motorcycle manufacturer:** we cut losses on a short position in a motorcycle manufacturer in June after the stock moved against us following the outcome of the Indian general election.

Future outlook

We retain our positive stance on the region despite the uncertainty associated with Trump's election victory. In China, we believe it is important to look past the potential short-term volatility arising from policy uncertainty and concerns around trade, and focus on the direction of travel, which in our view, reflects a strong resolve from policymakers to turnaround the economy. The prospect of structural reform in China is supported by the regional advantages of easing monetary policy and the anticipation of a new tech product cycle, which together, reinforces our conviction in the opportunity set for Asia ex Japan.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man AHL Target Growth Alternative – Annual Report Commentary

Market summary

2024 turned out to be full of surprises. Forecast rate cuts did not materialize and equities – particularly in the US – continued to roar ahead. Although geopolitical tensions continued in Ukraine and the Middle East, they flared up in unexpected places like Korea. Perhaps unsurprisingly, the gold price hit an all-time high. There were numerous changes in leadership; Donald Trump in the US, a Labour government in the UK, and no-confidence votes in European stalwarts France and Germany.

The need for a dynamic allocation in an investor's portfolio was once again highlighted in 2024. The relative calm in the first half of the year was quickly usurped by August's Yemageddon crisis, with the Fund's dynamic risk-management tools quickly activating. In this case, the speed of the rebound went against fast risk management techniques, but the episode highlighted how quickly things can go awry. There was another reminder following December's hawkish FOMC meeting; this time the Fund's active risk monitoring identified increasing equity-bond correlations and reduced exposures beforehand. With equity valuations approaching all-time highs in the US and the fight against inflation seemingly not over, we believe that holding an active investment that is adaptive across various market environments, such as TargetGrowth, will hold an investor in good stead in the coming years.

Performance review

Against this backdrop, Man AHL Target Growth Alternative returned 3.58%¹ over the period. The Fund's underperformance relative to its benchmark² in 2024 is worthy of examination, and we look in three directions: equities, fixed income, and active risk management.

Equities

Equities proved a profitable hunting ground for the Fund in Q1 as both the long-only multi-asset and trend-following sleeves captured gains. TargetGrowth's equity attribution outperformed that of its benchmark¹, with the Fund benefitting from its elevated exposure it had been building since Q4 2023. Gains were well diversified across regions, with equity indices like the Nikkei—long an underperformer compared to major stock indices in other developed regions—adding to the strong performance seen in the US and Europe. However, by year-end, stock attributions in TargetGrowth lagged the benchmark's¹ by more than 5%, a surprising reversal of fortunes considering the Fund's considerably higher average stock exposure at 63%.

Two key themes are responsible for the divergence, the first being the unfavourable nature of the August reversal for the active risk management tools utilised by the Fund. We explore this in more detail later, and instead focus on the equity story here. TargetGrowth's multi-asset long-only component uses a maximum diversification optimisation when constructing its portfolio, meaning that risk isn't too concentrated in one region or market. On the other hand, the equity index within the benchmark¹, the MSCI World Net Total Return Index, utilises a market capitalisation-weighted construction methodology. With the sheer size of US firms relative to the world, exemplified by the fact that Apple's value now dwarfs that of Germany and Switzerland's entire stock markets combined², this generates an implicit bias towards US equities in market capitalisation-weighted indices. There were stark difference in compositions, with MSCI World holding around 50% more in US equities than TargetGrowth's multi-asset long-only component.

Diversification is a core building block of TargetGrowth's portfolio construction, and we believe that diversification plays out in the long run. However, this was not the case in 2024 with the seemingly broad equity market rally in fact much narrower than one might think. The difference between the MSCI US3 and MSCI Ex-US4 indices performances over 2024 was striking, with MSCI Ex-US4 index underperforming its US counterpart by approximately 22%. There are many reasons behind this divergence, such as strong US economic growth and US tech mega-caps being well-placed to benefit from the AI frenzy to name a few. What is evident is that a portfolio which is overweight US equities, such as the benchmark's¹ equity allocation, was well positioned to outperform in 2024.

Fixed income

The Fund had negative attributions in the fixed income components of both multi-asset and trend-following sleeve. What has caused these problems was the lack of trends in fixed income and, in particular, the frequency of reversals.

We entered 2024 with expectations of six 25bp rate cuts from the Fed in the next twelve months. By summer this had decreased to two. By the end of Q3 it was ten, and at the time of writing we were back at two. To summarise we made two conclusions:

1. Expectations of central bank rate cuts were correlated across regions in 2024, and more so than in previous years.
2. Bond exposure in trend-following programmes was closely linked to these changing expectations.

What exacerbated the problem for the Fund, through the trend-following sleeve and the trend-overlay in the multi-asset sleeve, was the frequency at which these changes occurred. Although our algorithms aim to capture trends lasting from around two weeks to multiple months, the average trend sensitivity is around 2-3 months, which is close to the frequency of these changes in rate expectations. In other words, within fixed income this year, the Fund had fully built into positions at about the same time as market sentiment reversed. Frequent transitions from short to long positions are rarely conducive to trend-following performance, particularly at a frequency where trend-followers are most sensitive.

Our article argues that financial markets were particularly sensitive to central bank activity in 2024 – more so than in the last decade or so. However, we feel that this effect is unlikely to persist and note that, as the year draws to a close, European and US rates are already starting to take different paths.

Man AHL Target Growth Alternative – Annual Report Commentary (continued)

Active risk management

August 2024 saw the Fund's risk management tools called into action. A weaker-than-expected US economic data print, combined with a relatively hawkish Bank of Japan, led to an unwind of the large yen carry trade and spiked market risk indicators, generating significant moves across global equity indices. Coined "yenmageddon", the Nikkei was at the epicentre of the volatility, with the index notching its biggest daily drop since 1987. The CBOE Volatility Index (VIX) recorded its biggest ever one-day spike, exceeding even those during the 2008 financial crisis and the March 2020 episodes. However, compared to past periods of market turbulence, fear in the market eased quickly, and things got back to normal faster than usual.

The event proved challenging for both the multi-asset long-only and trend-following components of the Fund, with performance lagging that of the benchmark¹. With global stock markets trending upwards for much of H1, the Fund entered the month net long equities. The volatility shock then triggered the Fund's risk overlays, with equity exposures cut by more than two thirds within the first two weeks of August. In this instance, reacting so quickly to the changing market conditions was to the Fund's detriment as equity markets made a full recovery in a matter of days. TargetGrowth's subdued equity exposure meant that the Fund was unable to recoup its losses, unlike the benchmark¹ which took no risk off the table amidst the chaos and ended the month in the black.

Active risk management worked against investors on this occasion. However, it is important to consider the counterfactual in which the selloff in risk assets had extended; if we had not seen such an extraordinary V-shaped recovery, TargetGrowth would have been positioned to mitigate against, and even potentially profit from, the market reversal.

Future outlook

Episodes like August's 'yenmageddon' always prompt us to question our assumptions in designing TargetGrowth. Did we respond too quickly? Should we slow down? Should we gear back up quicker? The beauty of a systematic process is that we can back-test any potential changes. August's volatility spike was uniquely short-lived, and our initial research suggests that 'fitting' this period can potentially lead to detrimental behaviour at other times. Over the long run, our research indicates that responsive risk management is best placed to mitigate drawdowns thereby enabling investors to stay invested and participate in the upside.

Outside of August, we continue to research and develop new models, with an emphasis on harnessing new data sets rather than just fitting more complicated models to the same data. While we have previously noted that trading more responsive trend-following models provides enhanced 'crisis alpha', we have observed that slower trends have tended to do better in calmer, steady markets. Following this observation, we are researching a new predictor which uses proprietary data sets to identify market regimes. The predictor then switches between slow and fast trend speeds, depending on the regime indicator. We anticipate that TargetGrowth will allocate to this predictor early in 2025.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man RI Global Sustainable Growth Alternative – Annual Report Commentary

Market summary

The period under review was characterised by falling inflation levels, central bank policy, geopolitical tensions, and most recently Trump's victory in the US presidential election. Against this backdrop, the unit price of Man RI Global Sustainable Growth Alternative was flat for the year, a disappointing performance.

Performance review

Against this backdrop, Man RI Global Sustainable Growth Alternative delivered a 0.03%¹ return over the period.

Despite a net long exposure of above 20% throughout the twelve-month period under review, the Fund failed to capture any of the global equity market's positive returns. This was because the long portfolio only partially participated in a strong year for equity markets. To offset this, the investments in stocks it expected to fall (the short portfolio) needed to perform strongly and move independently of the rising market. However, the short portfolio ended up losing money for the fund, though these losses were partially offset by strong stock-picking in the long portfolio. Against this backdrop, Man RI Global Sustainable Growth Alternative returned 0.03%¹ over the period.

The long portfolio consistently represented more than 110% of the Fund's NAV (Net Asset Value) in 2024, with its gross exposure sometimes moving closer to 130%. For most of the year it consisted of over 30 positions. Some of these made some materially positive contributions, notably Nvidia, SAP and Arm Holdings. But too many long names suffered share price declines in 2024, with L'Oréal, Adobe and Idexx Laboratories making the largest negative contributions. The long portfolio was also held back by some of its consumer discretionary holdings, with worsening consumer confidence in China adversely affecting L'Oréal and Moncler's numbers, for example. Novo Nordisk also hurt the Fund's performance last year with a share price decline of 11%.

Novo Nordisk suffered a share price fall of 18% in December in response to the market's disappointment with the CagriSema phase 3 trial data. CagriSema is the company's planned new treatment for obesity, a product it hopes will complement its existing obesity medicine, Wegovy. The trial data demonstrated average weight loss of 20.4% after 68 weeks, an impressive number but below Novo Nordisk's expectation of 25% and no better than competitor Eli Lilly's now on the market Zepbound.

Novo Nordisk and Eli Lilly are still only just beginning to develop the obesity market, a critical condition that affects close to one billion people in the world today, is associated with over 200 comorbidities and which costs the US economy alone over \$1 trillion each year. Both Wegovy and Zepbound are today's two leading treatments, thanks to their efficacy and documented safety profiles, but we believe that CagriSema can still be a formidable new treatment with which Novo Nordisk can maintain its joint leadership of the obesity market.

At the end of December, the gross exposure of the long portfolio stood at 109% of the Fund's value, approximately in line with where it stood at the start of 2024. Having run a larger long portfolio for most of the year under review, we have decided to run a more focussed long portfolio which prioritises our highest conviction names. For example, there were 28 holdings in the long portfolio at year-end, compared to 32 at the end of 2023. We prefer to take risk via stock-specific concentration rather than managing a portfolio of long positions that is too large or difficult to manage effectively. We think this is increasingly appropriate in a stock market which has become brutally unforgiving of companies which fail to live up to expectations.

The short book represented over 90% of the Fund's size through most of 2024 and closed the year with a gross exposure of 89%. It consists of both fundamentally selected stock-specific short positions and a hedge book, with the latter designed to control both the Fund's sensitivity to the direction of the market and any biases.

Last year saw us grow the size of the short book dedicated to fundamentally selected names. By the end of 2024 these shorts represented 26% of the Fund compared to 17.5% at the start of the year. Normally these are companies which we have identified as facing a deterioration in their competitive positions, often when their end-markets have become more challenging. Tougher market conditions, presented us with new ideas in 2024, resulting in there being twelve fundamentally selected shorts in the book by the end of the year compared with nine at the end of 2023. Various shorts were also closed intra-year in order to realise profits (e.g. Nike, BMW, JDE Peet's) or cut losses (e.g. Dell, Rockwool, Mobileye).

Although the fundamental short book in 2024 was unable to avoid making a negative return for the Fund in a rising market, the negative contribution was substantially smaller than had it performed in line with the rise in global equities. Notable successes included a French luxury goods company where its lead brand has lost its competitive lustre into softer demand for luxury goods, most notably in China. Another was a global food and beverages business where organic growth had come to rely too heavily upon higher like-for-like price increases. As shareholders in L'Oréal, we also decided to short one of its weaker competitors.

Based upon significant alpha generation since the inception of the Fund, and an opportunity set which is not diminishing, we plan to augment the size of the fundamental short book further in 2025. We want as much as possible of the Fund's gross equity exposure to be committed to alpha generation in 2025.

¹ Performance data is shown for Man RI Global Sustainable Growth Alternative IN USD share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.33% management fees plus other fees. Other share classes may charge higher fees.

Man RI Global Sustainable Growth Alternative – Annual Report Commentary (continued)

Future outlook

Today's complex and challenging macroeconomic and geopolitical environment calls for a highly selective approach to running both the long and short portfolios of the Fund. Companies held in the long portfolio must be businesses with powerful competitive advantages and a track record of staying power. We believe such companies can shine, particularly in tougher circumstances. The short book will favour companies where we have identified vulnerabilities, weaknesses that are more likely to come to the fore in a global economy which faces obstacles to growth.

Man GLG Senior Secured Opportunities – Annual Report Commentary

Market summary

2024 was an eventful year for risk assets, punctuated by increasing geopolitical affairs and market volatility, amidst a series of global rate cuts as policy makers seemingly engineered the coveted soft landing.

At the onset, sticky inflation dominated the narrative as developed economies continued to post strong economic data. This coupled with high energy prices diminished rate cut expectations, particularly in the US, hurting government bonds.

June marked a significant shift, as the European Central Bank cut rates by 0.25% with the Bank of England also trimming their base rate by 0.25% for the first time in the following month. However, perhaps the most notable move in monetary policy, was the Federal Reserve's 0.5% rate cut in September, sparking a risk-on rally at the end of Q3. The long-awaited cut was the first of three over 2024, with December's final 0.25% cut being of a much more hawkish nature, after two consecutive upticks in CPI serving as a reminder that inflation had not quite been tamed.

Changing political regimes and geopolitical affairs also played a key role in shaping markets over the year. Escalations in the Middle East continued and nearly 50% of the global population headed for the polls in 2024 - which saw a record 60+ general elections. A new era for British politics began as the UK ushered in its first Labour government in 14 years, while Donald Trump's election victory and the Republican sweep sparked a significant risk-on rally across the Atlantic. Central European politics was not short of its own volatility as French Prime Minister Michel Barnier's government collapsed after just three months while German Chancellor Olaf Scholz lost his own vote of confidence at the back end of the year.

Against this backdrop, it was a positive year for global high yield with defaults low and the significant carry resulting in a strong return. Bond yield spreads narrowed across the board, with overall levels dropping from 3.85% to 3.08%. In European high-yield markets, spreads fell from 3.96% to 3.11%, while in US high-yield markets, they decreased from 3.39% to 2.92%. This tightening was significant, especially considering spreads were already relatively low following Trump's election victory. From a credit ratings perspective, lower quality credit outperformed, benefiting from the robust growth environment, however this was not uniform across markets with segments of the European market under pressure from political instability and slowing growth. Sector wise, real estate and financials were the main winners while capital goods and automotives lagged.

Performance review

Against this backdrop, Man Senior Secured Opportunities returned 10.9%¹ over the period, outperforming the ICE BofA BB-B Global High Yield Secured Bond Index benchmark, which returned 6.6%².

Key contributors

As most of our investors will know, idiosyncratic decisions are the driving force behind active returns for our portfolios. The main contributors included:

- Colombia, Financials: 0.81%
- France, Financials: 0.77%
- Luxembourg, Consumer Discretionary: 0.72%
- UK, Financials: 0.57%
- UK, Healthcare: 0.50%

Key detractors

- Chile, Communication Services: -0.49%
- Switzerland, Industrials: -0.32%
- Germany, Consumer Discretionary: -0.25%
- US, Financials: -0.24%
- UK, Financials: -0.14%

Future outlook

With a focus on 2025, it remains to be seen how policies will shape up once the Trump administration is in place, but we are expecting a more inflationary environment with steeper curves based on previous pronouncements and campaign promises. We remain a bit concerned that this could mean that the Fed could pivot to a holding pattern in terms of rate cuts which would put pressure on more vulnerable areas of the corporate market as 'higher for longer' typically equates to rising defaults in sub-investment grade credit.

With this being said, there are several factors which may keep bankruptcies in check. Firstly, a resilient global economy, and in particular US economy, may give issuers the revenue streams they require to offset higher borrowing costs. Secondly, fundamentals remain robust – both leverage and interest rate coverage ratios are at mid-cycle levels. Finally, the quality of the market has been improving over the years, as more highly indebted firms opt to finance themselves in the leveraged loan markets, which are experiencing higher levels of default than fixed-rate high yield for the first time ever.

¹ Performance data is shown for Man GLG Senior Secured Opportunities I EUR share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 0.60% management fees plus other fees. Other share classes may charge higher fees.

² ICE BofA BB-B Global High Yield Secured Bond Index (EUR TR) Hedged is the official benchmark for the fund.

Man GLG Senior Secured Opportunities – Annual Report Commentary (continued)

Another factor which we believe is not being as widely discussed as it should be, is the impact of potential US immigration policies on future employment or growth. Immigration has been a major driver behind the growth of the US labour force and stricter measures related to this may lead to potential headwinds for overall growth in the coming 12 months.

Without clarity on US trade policy, it's hard to have conviction on the outlook for spreads. What remains clear however, is there is very little cushion for things to go wrong with spreads historically tight.

We do not necessarily see this as a bullish environment for pure credit beta and given the current level of spreads, active management in the high yield space will be crucial. A significant proportion of the high yield market, particularly the BB space, trades at a spread of below 3%. This will be an area that we will continue to avoid, given poor convexity. However, this masks the idiosyncratic opportunities which remain prevalent at spread cohorts above these levels, particularly in small- and medium-sized issuers. In particular, the US market remains priced for perfection.

With this in mind, we continue to favour Europe, with a focus on the shorter-dated part of the market. All-in yields remain elevated compared to post-Global Financial Crisis (GFC) levels and as the duration of the market has dropped, the overall breakeven of the asset class (the amount of spread or yield widening required to lose money on a forward-looking 12-month basis) is at a high level compared to history. In particular, we are remaining active in stressed refinancing and liability management exercises (LME) with a specific focus on business models with hard assets.

All-in all, similar themes seen in 2024 look poised to dictate how 2025 will play out. Growth is resilient in many markets and the battle against inflation looks to be resurging. We are positioning in the more value-oriented parts of the market consistent with our bottom-up investment approach where we are trying to capture high yield bonds trading at significant discounts to underlying fundamentals.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man European High Yield Opportunities – Annual Report Commentary

Market summary

2024 was an eventful year for risk assets, punctuated by increasing geopolitical affairs and market volatility, amidst a series of global rate cuts as policy makers seemingly engineered the coveted soft landing.

At the onset, sticky inflation dominated the narrative as developed economies continued to post strong economic data. This coupled with high energy prices diminished rate cut expectations, particularly in the US, hurting government bonds.

June marked a significant shift, as the European Central Bank cut rates by 0.25% with the Bank of England also trimming their base rate by 0.25% for the first time in the following month. However, perhaps the most notable move in monetary policy, was the Federal Reserve's 0.50% rate cut in September, sparking a risk-on rally at the end of Q3. The long-awaited cut was the first of three over 2024, with December's final 0.25% cut being of a much more hawkish nature, after two consecutive upticks in CPI serving as a reminder that inflation had not quite been tamed.

Changing political regimes and geopolitical affairs also played a key role in shaping markets over the year. Escalations in the Middle East continued and nearly 50% of the global population headed for the polls in 2024 - which saw a record 60+ general elections. A new era for British politics began as the UK ushered in its first Labour government in 14 years, while Donald Trump's election victory and the Republican sweep sparked a significant risk-on rally across the Atlantic. Central European politics was not short of its own volatility as French Prime Minister Michel Barnier's government collapsed after just three months while German Chancellor Olaf Scholz lost his own vote of confidence at the back end of the year.

Against this backdrop, it was a positive year for global high yield with defaults low and the significant carry resulting in a strong return. Spreads across the board tightened from 3.85% to 3.08% with European high yield markets falling from 3.96% to 3.11% and US high yield markets from 3.39% to 2.92% – tightening notably from already stretched levels post the Trump win. From a credit ratings perspective, lower quality credit outperformed, benefiting from the robust growth environment, however this was not uniform across markets with segments of the European market under pressure from political instability and slowing growth. Sector wise, real estate and financials were the main winners while capital goods and automotives lagged.

Performance review

Against this backdrop, Man European High Yield Opportunities returned 13.4%¹ over the period, outperforming the ICE BofA European Currency High Yield Constrained Index benchmark, which returned 8.7%².

In terms of contributions, the majority of total returns were driven by sector and security selection decisions which is what investors should expect for this fund. Over the period, duration marginally detracted from returns.

Key contributors

As most of our investors will know, idiosyncratic decisions are the driving force behind active returns for our portfolios. The main contributors included:

- Germany, Financials: 1.01%
- Luxembourg, Real Estate: 0.97%
- Luxembourg, Consumer Discretionary: 0.88%
- Mexico, Consumer Services: 0.67%
- Colombia, Financials: 0.54%

Key detractors

- Luxembourg, Financials: -0.72%
- Switzerland, Industrials: -0.47%
- Luxembourg, Industrials: -0.29%
- Ireland, Materials: -0.15%
- Brazil, Energy: -0.15%

Outlook

With a focus on 2025, it remains to be seen how policies will shape up once the Trump administration is in place, but we are expecting a more inflationary environment with steeper curves based on previous pronouncements and campaign promises. We remain a bit concerned that this could mean that the Fed could pivot to a holding pattern in terms of rate cuts which would put pressure on more vulnerable areas of the corporate market as 'higher for longer' typically equates to rising defaults in sub-investment grade credit.

Man TargetClimate – Annual Report Commentary

Market summary

In 2024, markets defied expectations as anticipated rate cuts failed to materialise, yet US equities surged to new highs. The race for chips continued, with AI dominating earnings calls as investors scrutinised capex spends and fretted about where long-term gains might accrue. Geopolitical tensions persisted in Ukraine and the Middle East, while gold prices soared to an all-time high. Political landscapes shifted significantly with Donald Trump's return to power in the US, a Labour government taking office in the UK, and no-confidence votes shaking the leaderships in France and Germany.

From a climate perspective, 2024 marked another record-breaking year for global heat, with UN Secretary General António Guterres emphasising that 'the top 10 hottest years on record have occurred in the last decade, including 2024.' The implications of Donald Trump's return to the White House for environmental policy remain uncertain. However, during his first term, more than 125 US environmental rules and policies were rolled back. On a more optimistic note, there is hope that market forces, driven by advancements in technology and the declining costs of renewables, could catalyse the changes needed to limit warming.

Performance review

Against this backdrop, Man TargetClimate returned 2.64%¹ over the period.

We entered 2024 with market pricing around six rate cuts from the Fed, and analysts from sell-side institutions anticipating returns on the S&P 500 close to zero on average, but with some degree of dispersion. What transpired, of course, was completely different. The Fed cut three times, totalling 1%, and the S&P 500 was up 23%. Based upon the historical evidence, we should not be surprised by this; in the last decade, analyst predictions for year-ahead S&P 500 returns have only been close once, and that was eight years ago. Expectations of rate cuts are also notoriously hard to predict (as we discussed in a recent note 'Diary of a Quant').

TargetClimate uses the Man Group the SDG Framework to select corporate for the portfolio and dedicated scoring methodologies for other asset classes². It manages risk using liquid futures and swaps. This active approach delivers a dynamic allocation through time, with net investment exposures changing in response to market conditions. We do not explicitly predict returns, but instead forecast risk, allowing us to avoid the pitfalls associated with relying on stock price forecasts. Interested readers can find the philosophy in 'How to Build a Systematic Climate Portfolio' and 'Risky Business' or more specific details in last year's end of year letter.

On the year, stocks and credit were the standout performers, with generally rising equity markets coupled with tightening credit spreads beneficial to the Programme. Bonds were more difficult, with a rapid repricing of rate cuts early in the year sending prices tumbling and causing losses. In commodities, TargetClimate holds a portfolio of markets deemed aligned with the energy transition via an index, and this was also down in 2024, with prices of EUA carbon emission allowances (the joint largest holding) notably falling.

Aside from financial performance, we also track environmental metrics, including emissions, and compare these with the Paris Aligned benchmark and the MSCI World. TargetClimate uses multiple metrics to select its sustainable long investment portfolio, for example, using alignment with climate-related sustainable development goals, third-party scoring, and consideration of emissions. These selection criteria resulted in a weighted average carbon intensity (WACI) below the MSCI World Climate Paris Aligned index at 31 December 2024. Note that the non-climate related MSCI World index had a WACI of over 90, around three times that of TargetClimate.

Future outlook

Rather than forecasting market returns, we focus on risk management, which we believe is more predictable and leads to better outcomes. We detail this in a summary paper [here](#) and a more academic write up [here](#).

We remain optimistic about TargetClimate. We believe our active approach to risk management and dynamic positioning provides something unique in the climate investment space. Indeed, we continue research into applying sustainability principles to systematic investment, and interested readers can dig deeper by visiting Man Institute for a podcast [here](#).

Our philosophy remains the same: it is extremely difficult to time or predict markets moves with accuracy, but we can navigate a range of market conditions with a balanced, diversified approach centred around risk management. We designed TargetClimate with the aim to be robust to whether bonds outpace equities, whether inflation surges, or whether recession strikes. It maintains a well-rounded portfolio that can systematically respond to changing market conditions, while selecting assets based on sustainability criteria defined by Man Group.

We would like to thank our investors for their trust and investment. As Niels Bohr famously said, 'Prediction is very difficult, especially if it's about the future.' This underscores our belief that a risk-focused, diversified approach like TargetClimate is key to navigating uncertain markets.

¹ Performance data is shown for Man TargetClimate I USD share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 0.75% management fees plus other fees. Other share classes may charge higher fees.

MSCI World Climate Paris Aligned Index is a reference benchmark for this Sub-Fund. Please consult the Prospectus or Key Investor Information Document ('KIID') for more information.

² SDG stands for the UN Sustainable Development Goals. For more information about the SDG framework and the scoring methodologies applied, please refer to the Prospectus' sustainability annex and the relevant SFDR reporting annex included at the end of the annual report.

Man Emerging Markets Corporate Credit Alternative – Annual Report Commentary

Market summary

2024 was a strong year for EM Corporates both on an absolute basis and relative to developed markets. The JP Morgan CEMBI Broad Diversified delivered a total return of 7.6% with the HY subcomponent outperforming delivering 11.7% vs. IG which delivered 4.9%. Over the year EM markets outperformed their DM counterparts as well with US IG up 2.8% and US HY up 8.2%. Within EM Corporate HY returns were well diversified across country and sector. Leaders from a sector perspective included Metals & Mining, Real Estate and Transport while Oil & Gas, Pulp & Paper, and infrastructure lagged the broader market. On a country basis leaders included Ukraine, China, Chile and Argentina while countries within the middle east lagged the broader move mainly due to the higher quality nature of the market and select positions in Africa and Southeast Asia.

Overall supply came in at 399 billion on a gross basis and 39 billion on a net basis. Net supply was positive for the first time since 2021, but still well below the average net supply from 2017 – 2021 which reached 176.4 billion. The backdrop of higher US rates and a stronger dollar should likely lead to a more challenging supply picture in 2025. Positive technicals should continue with net supply continued to be forecasted at negative levels as companies look to use local currency markets instead of hard currency funding markets. Additionally, the rise of private credit has provided another source of potential financing opportunity for companies.

Performance review

Against this backdrop, Man Emerging Markets Corporate Credit Alternative returned 15.35%¹ over the period.

In terms of contributions, the majority of total returns were driven by sector and security selection decisions which is what investors should expect for this fund.

Key contributors

As most of our investors will know, idiosyncratic decisions are the driving force behind active returns for our portfolios. The main contributors included:

- Peru, Materials: 2.17%
- China, Information Technology: 2.07%
- Ukraine, Government: 1.08%
- Brazil, Industrials: 0.92%
- Brazil, Consumer Staples: 0.86%

Key detractors

- UK, Real Estate: -0.37%
- US, Put Spreads: -0.33%
- China, Real Estate: -0.12%
- Venezuela, Energy: -0.10%
- South Africa, Government: -0.09%

Future outlook

The team remain constructive on the outlook for credit in the medium term. Defaults have remained contained and activity in primary markets have largely dealt with upcoming maturity walls. Fundamentals remain in good shape and on an improving trajectory which is a positive story relative to developed markets. Technicals remain strongly supportive of EM Corporates, however, Valuations in the JPM CEMBI Index are a tad rich at the moment.

We believe that 2025 could be a trickier year for investors after the substantial returns in 2024. Front and centre will be the increasing geopolitical risk from the new Trump administration's approach to foreign policy and trade. We believe that investors should be prepared for increased currency volatility at the minimum which could also lead to spread widening particularly with the overall market at more expensive levels. It remains to be seen what policies will be able to be implemented by the next President with the support of the Senate / House, but we should expect more protectionist policies and lower taxes which we would associate with higher inflation. The higher inflation regime is likely to lead to steeper curves, in line with the recent market reaction, with a floor on the long end even if the Fed decides to cut rates.

¹ Performance data is shown for Man Emerging Markets Corporate Credit Alternative DNF USD G-Dist MO share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.58% management fees plus other fees. Other share classes may charge higher fees.

Man Emerging Markets Corporate Credit Alternative – Annual Report Commentary (continued)

From a policy perspective, it appears as if the next administration will use the threat of tariffs as a starting point for negotiations. In parallel, we expect likely coordination behind the scenes to arrive at a tariff plus market opening solution that can be seen as a win for the new administration. This will likely lead to a set of winners and losers as each country tries to position itself in line with its own long term strategic goals and the philosophy of the governing parties in those countries. Talking about specific situations, we expect RMB volatility to stay elevated and more focus is going to be paid on the success of recent stimulus measures where we still take a wait and see approach. Given Milei's philosophical alignment with Trump on many issues, we believe that Argentina could remain a winner in the new regime, and we continue to maintain healthy exposure to Argentina. A quicker end to the conflict in Ukraine could also be supportive to domestic assets.

Amidst the backdrop of heightened uncertainty and currency volatility we do think that policy missteps (e.g. shifts left / populist measures) will be penalised by the market and lead to significant country dispersion for EM investors, as can be seen through the recent underperformance in Brazil. In this environment we have identified a few markets that could be most affected and are looking to increase single name shorts within the Strategy. However, given the limited net supply and decent valuations for selective investments in the HY space, we continue to maintain a positive net exposure with an attractive yield of over 9% and with a duration of just over 1 year.

Given the factors stated above and barring any geopolitical risks flaring up, we believe that spreads can remain where they are or in fact get more expensive. The Strategy continues to maintain a barbell structure focusing on high quality carry in the front end of the curve alongside attractive opportunistic and special situations investments. We retain a few sovereign CDS, equity puts, and single name shorts and remain flexible to increase short positions if and when needed.

We retain a positive view on opportunities in Latin America with a focus on Brazil and Argentina with more limited net exposure in China. Within Brazil we are focused primarily on opportunities in companies with dollar linked revenues.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man European Leaders Alternative – Annual Report Commentary

Market summary

The long book contributed positively to returns, while the short book detracted. Among the long strategies, the turnaround strategy, 'emerging leaders', made the largest positive contribution to returns, followed by our quality strategy, 'Compounding leaders'. The 'value' strategy also marginally positively contributed. Performance in our short book was negative, with our accounting, fundamental, and governance shorts all detracting shorts detracted.

Towards the end of the year, and given the elevated uncertainty being caused by the then upcoming US elections, we reduced the gross exposure of the Fund, with the intent to rebuild our gross exposure once as volatility subsides and uncertainty abates. As such, the Fund's gross exposure at the end of the year was at the lower end of our target range, 125%.

Performance review

Against this backdrop, Man European Leaders Alternative returned 1.88%¹ net of fees in 2024.

At year end, our gross exposure was +125% and net exposure was +5.4%.

At an underlying stock level, our investment in Adidas AG was once again the top contributor to Fund returns. Adidas, which falls within our 'turnaround' strategy, continues to benefit from the new strategy and culture being implemented by CEO, Björn Gulden, as well as a renewed focus on product innovation and rebuilding relationships with channel partners. SAP, another 'turnaround', also performed well in 2024, driven by strong operating performance and the successful execution of the CEO's ERP cloud strategy, as well as the welcomed emphasis on operational rigour and capital discipline by CFO Dominik Asam.

In contrast, our largest detractors were LVMH and ASML. LVMH struggled amid a backdrop of weakening consumer demand for luxury goods, while ASML was negatively impacted by a slower semi-conductor end market recovery as well as technological challenges faced by a few of their larger foundry customers which resulted in ASML reassessing their 2025 financial targets.

Future outlook

Trump's victory and the uncertainty around the French and German political equilibrium contributed to the market adopting a pessimistic view towards Europe. We are less pessimistic on Europe, and see several positives that could shift the narrative over time:

- 1) Currency movements are broadly favourable for large European companies that have USD revenue exposure
- 2) US energy policy may result in lower energy costs for European economies
- 3) Potential resolution of the Ukraine/Russia conflict could trigger rebuild initiatives and a reduction of the European risk premia
- 4) European interest rates may fall faster than US rates, stimulating construction spend and providing a boost to European disposable incomes
- 5) European companies could be beneficiaries of Chinese stimulus measures

We see this as an exciting opportunity to progressively increase our exposure in early 2025.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Man Financial Credit Opportunities – Annual Report Commentary

Market summary

2024 was an eventful year for risk assets, punctuated by increasing geopolitical affairs and market volatility, amidst a series of global rate cuts as policy makers seemingly engineered the coveted soft landing.

At the onset, sticky inflation dominated the narrative as developed economies continued to post strong economic data. This coupled with high energy prices diminished rate cut expectations, particularly in the US, hurting government bonds.

June marked a significant shift, as the European Central Bank cut rates by 0.25% with the Bank of England also trimming their base rate by 0.25% for the first time in the following month. However, perhaps the most notable move in monetary policy, was the Federal Reserve's 0.5% rate cut in September, sparking a risk-on rally at the end of Q3. The long-awaited cut was the first of three over 2024, with December's final 0.25% cut being of a much more hawkish nature, after two consecutive upticks in CPI serving as a reminder that inflation had not quite been tamed.

Changing political regimes and geopolitical affairs also played a key role in shaping markets over the year. Escalations in the Middle East continued and nearly 50% of the global population headed for the polls in 2024 - which saw a record 60+ general elections. A new era for British politics began as the UK ushered in its first Labour government in 14 years, while Donald Trump's election victory and the Republican sweep sparked a significant risk-on rally across the Atlantic. Central European politics was not short of its own volatility as French Prime Minister Michel Barnier's government collapsed after just three months while German Chancellor Olaf Scholz lost his own vote of confidence at the back end of the year.

Against this backdrop, credit markets produced positive returns over 2024, with global high yield's return of 8.9% outperforming investment grade which generated 3.4% as higher yielding assets delivered significant carry while defaults remained moderately low. There was divergence across regional winners and losers, as Europe led investment grade performance while Sterling saw the strongest performance across high yield, with spreads tightening over 1.60%. US credit tightened from already stretched levels post the Trump win. From a sector point of view, real estate outperformed across the credit quality spectrum while capital goods and automotives lagged.

Performance review

Against this backdrop, Man Financial Credit Opportunities returned 12.5%¹ over the period and outperformed its benchmark by 6.6%². Returns were driven primarily from Europe and the UK, with senior unsecured banking positions leading contribution.

Outlook

The market is continuing to grapple with a tug-of-war between attractive yields and tight spreads. The election of Trump prompted a revival of animal spirits and a remarkable rally in credit, with the US investment grade markets touching an all-time tight of 0.73%. We assume spread tightening from here will be limited, leaving passive investors with, at best, a carry opportunity set. Wider spreads in the coming year would likely subject these investors to losses.

While we do not yet know US policy specifics, a series of themes for investment grade credit in 2025 are emerging. Beginning with tariffs, talk of 20% taxes on non-Chinese imports into the US could simply be a negotiating tactic, but higher levels than those in place today are expected. We have been heavily underweight automotives and broader manufacturers for over a year due to the overvaluation of cyclical sectors. The outcome for services is less clear, but we continue to favour financials, particularly in Europe, where we believe the profitability of certain banks will remain healthy despite an uptick in loan book losses.

Another important theme is deregulation. Earlier this year, the UK opted to water down proposed banking regulations in a bid to support growth. The new US government could opt to weaken antitrust rules while a soft landing could incentivise companies to be even more aggressive with their balance sheets, both of which could heighten animal spirits and spur heightened levels of mergers and acquisitions (M&A).

At this point in the cycle, we believe it remains prudent to have a low credit beta compared to the wider markets, while still focusing on selecting securities which can provide a higher carry than standard market benchmarks. We aim to not take significant active duration views, but due to the supply-demand imbalance between increasing government debt issuance coupled with modest appetite from investors, we could see more volatility going forward from the rates market, particularly in longer-dated securities.

¹ Performance data is shown for Man Financial Credit Opportunities I EUR share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 0.95% management fees plus other fees. Other share classes may charge higher fees.

Man Global Technology Equity Alternative – Annual Report Commentary

Market summary

While technology stocks had a strong first half of 2024 with gains attributable to optimism about the long-term profitability of AI and the record high performance of semiconductor manufacturers like Nvidia, Over the summer, there was a noticeable shift in the market as investors reduced their positions in AI and semiconductor stocks, opting instead for safer, more stable parts of the tech sector that tend to have smaller price swings. Difficult conditions continued in the fourth quarter with semiconductor stocks leading the declines after ASML's unexpectedly weak guidance triggered a wider sell-off. Conditions improved in November following Trump's victory, before selling off again in December. Despite this volatility in the second half of the year, 2024 was still another strong year for tech stocks, with the sector leading the market for the second year in a row.

Performance review

The Fund returned (0.64)%¹ net of fees since its launch on April 4, 2024.

During this period, most of the gains came from the fund's investments in stocks it expected to rise, while bets against stocks it expected to fall reduced returns. Holding cash also added positively to the fund's performance.

Of the key themes delivered through the portfolio, net long exposure to AI monetisation and 10x productivity contributed the most to positive returns. Conversely, betting against Oran negatively impacted returns, as the company was affected by falling prices for its products and the rise of automation in its industry.

At the stock level, the top contributors over the course of the year were longs in Twilio Inc (10x productivity) and SAP (AI monetisation). Twilio, a customer engagement platform that leverages AI, had a strong run beginning in November as demand for its solutions and products grew. SAP, the German multi-national software company, gained on the momentum of their cloud revenues which grew dramatically in the first six months of the year.

Detractors at the stock level were primarily on the short side. A short position in a computer manufacturer cost the fund money after an earnings-based rally in the summer. A short position in a multinational telecommunications company (to Oran driven communication) also lost money after market responded positively to strong Q1 results.

Positioning and outlook

The Fund continues to systematically scale up its gross exposures since its launch in April. Idiosyncratic risk, risk related to individual positions, exposures dominate the Fund's overall risk profile, finishing the month at circa 65%.

AI monetisation and diffusion themes continue to represent the largest share of the Fund's gross exposures.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Systematic RI Equity Alternative – Annual Report Commentary

Market summary

While expectations for the number of rate cuts in 2024 moderated in the first quarter, markets continued to soar to all time highs. A strong momentum rally led developed equity markets higher to begin 2024, as the sudden shift in market trends seen in December quickly reversed. Technology and growth stocks in general were once again in favor particularly within the US and Taiwan. Market exuberance did not materialize in all equity markets however, as China's slowing growth continued to weigh on emerging markets despite the country's efforts to stimulate economic activity. Global equity markets remained elevated in February, surging on the combination of strong economic data and a constructive corporate earnings season in the US. Global equities finished the first quarter on a strong note, buoyed by a solid fundamental backdrop, strong corporate earnings and a US Federal Reserve still leaning towards rate cuts in the back half of the year. Emerging market equities failed to keep pace with their developed market counterparts as the strong rally driven by China in February faltered in March.

Aside from the temporary meme stock frenzy in May, investors were generally cautious during the second quarter of 2024. Election surprises in Mexico, India and France unnerved markets, while the impending US election, stubborn inflation and diminishing hopes for rate cuts were further reasons investors stayed on the sidelines. From a market concentration perspective, the quarter saw a picture similar to the what we observed one year prior, in the second quarter of 2023. For the second quarter of 2024, the hit rate (or the percentage of index constituents outperforming the overall index) for the MSCI World Index was 34%, similar to the second quarter of 2023, and the lowest in the last decade with only about a third of names outperforming the MSCI World. With 40% of the world population heading to the polls for major elections in 2024, political risk was on every investor's mind. Within emerging markets, closely watched elections in Taiwan and South Korea earlier this year turned out to be uneventful with outcomes in line with expectations and a likely continuity of previous policies. The surprises came from Mexico, India and South Africa in the second quarter.

In Q3 2024, the long-awaited Fed rate cut finally occurred. In spite of the market volatility, the MSCI World Index returned 6.4% for the third quarter, with 4.5% of the returns driven by changes in earnings expectations and the rest from multiple expansion. From a P/E multiple perspective, the Index was 18.2x at the end of the third quarter, a touch higher than the 17.9x observed at end of the second quarter. Both value and momentum investment styles underperformed, and the rotation in factor performance, highlighted by the volatility of monthly returns for these strategies, did not help. There was no shortage of market volatility in July, as investors expressed uncertainty about the future payoff of AI related themes and how quickly those may manifest in company earnings. Weaker than expected inflation data in the US and continued slowing growth in China also impacted markets. Equity markets then experienced a significant rotation during the first week in August as renewed fears of a hard landing and resulting global recession drove risk assets lower to open the month, only to stage a rebound by month end as the MSCI World finished up 2.6%. The late September China policy boost added to market volatility in EM in particular, triggering a massive momentum reversal on the heels of the Chinese equity market rally.

Volatility maintained center stage in October, as risk assets gave back gains made in the prior month. Continued worries over slowing growth in addition to US election outcomes weighed on global developed markets, as the MSCI World Index gave back -1.98%. After a robust rally in Chinese equities in September, emerging markets more broadly fell back to earth as the MSCI Emerging Markets Index dropped -4.5% on the heels of a stronger dollar. In November, US equity markets rallied on the heels of the presidential election, with the S&P 500 Index jumping 5.9%. While European markets also benefitted from the general risk-on backdrop, emerging market equities significantly underperformed, hit by the continued US dollar rally as well as concerns over potential tariffs from the incoming administration. As the post-election equity rally started to run out of steam in the US in December, the Fed's hawkish remarks on December 18th sent equities down, with the S&P 500 down almost 3% on the day, while US yields jumped. Emerging markets fared better, supported by a risk rally in China in early December. In South Korea, the last month of the year was marked by political chaos, with President Yoon announcing martial law before withdrawing it a few hours later on December 4th. His impeachment by the National Assembly quickly followed, as well as the impeachment of his former prime minister, acting as interim president. The political crisis added to existing investor concerns about the country's economy and slowing growth, weighing further on the country's stock market.

For 2024 overall, within developed markets, the MSCI World Index was up 18.7% and the S&P 500 Index was up 25.0% in USD. Elsewhere in developed markets, the MSCI Japan Index was up 20.7% in JPY and MSCI Europe Index was up 8.6% in euros for the period. Within Emerging Markets, the MSCI Emerging Markets Index gained 7.5% in USD and the MSCI China A Index was up 11.7% in USD during the year.

Performance review

Overall the fund performance¹ was positive for the period with mixed performance from the models. The Value, Alternative Momentum, Factor Selection, Behavioural Quality, Traditional Momentum, and ESG were positive, while Informed Investor was flat, and Cyclical Quality and Climate were negative. Within EM, the Value, Quality, Informed Investor, and Momentum models were all positive, while Factor Selection was negative. The fund saw positive contribution from low volatility and beta.

From a sector perspective Industrials contributed the most, while Information Technology was the largest detractor. From a region perspective, Japan and Emerging Markets contributed the most to performance, while the US detracted.

¹ Performance data is shown for Man Systematic RI Equity Alternative DN H EUR share class net of fees with income reinvested, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 2% management fees plus other fees. Other share classes may charge higher fees.

Man Systematic RI Equity Alternative – Annual Report Commentary (continued)

Future outlook

Looking further ahead in 2025, geopolitical risks remain front and center. In the US, the new administration that formally took office in January will almost undoubtedly impact the dynamics of the war in Ukraine and the conflict in the Middle East as well as many matters in the US and abroad. The threats of tariffs, if enacted, could seriously impact China's main sources of growth and limit the government's ability to lift the economy out of its negative spiral. In the US alone, tariffs could make already stubborn inflation even stickier and affect interest rate expectations, impacting the US dollar, and therefore, emerging markets. With this in mind, we will not rest on our laurels, but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead. Our process continues to focus on idiosyncratic, bottom-up stock selection, as we aim to be increasingly agnostic to the overall market environment by focusing on continued research and development in order to build well diversified portfolios that can navigate market inflections and volatility.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Dynamic Diversification – Annual Report Commentary

Performance review

The Fund¹ launched on the 3rd of December 2024 and produced a negative return during that period. Cash Equities, Bonds and Stock Indices detracted over this period while Currencies provided some offsetting performance.

Future outlook

Based on the factors which we have considered above, we do not have cause for concern which would otherwise prevent the Sub-Fund from operating as a viable economic entity during the ordinary course of business over the next 12 months, following the year-end reporting date.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Indices definitions

CBOE Volatility Index (VIX index)	Index measuring the market's expectation of future volatility. The VIX Index is based on options of the S&P 500® Index, considered the leading indicator of the broad U.S. stock market. The VIX Index is recognized as the world's premier gauge of U.S. equity market volatility. For more information go to http://www.cboe.com/vix
Consumer Price Index (CPI)	The Consumer Price Index (CPI) is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services in the U.S.
ICE BofA Index	The ICE BofA Index is a series of market-capitalisation weighted indices designed to measure the performance of various fixed-income markets. These indices are constructed by the Intercontinental Exchange (ICE) and Bank of America (BofA), spanning a wide range of bond types, including corporate, government, and municipal bonds. The indices are commonly used as benchmarks by investors and portfolio managers. For more information, go to https://www.theice.com/market-data/indices .
Euro Stoxx 600	The STOXX Europe 600 Index is derived from the STOXX Europe Total Market Index (TMI) and is a subset of the STOXX Global 1800 Index. With a fixed number of 600 components, the STOXX Europe 600 Index represents large, mid and small capitalization companies across 17 countries of the European region: Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland and the United Kingdom. For more information go to www.stoxx.com
FTSE 100 Index	The FTSE 100 is a market-capitalisation weighted index of UK-listed blue chip companies. The index is part of the FTSE UK Index Series and is designed to measure the performance of the 100 largest companies traded on the London Stock Exchange that pass screening for size and liquidity. For more information go to https://www.ftserussell.com/index-series/index-spotlights/uk-equity-indexes
ICE BofA Merrill Lynch 91-Day Treasury Bill Index.	Index consisting of U.S. Treasury Bills maturing in 90 days.
MSCI All Country World Index (MSCI ACWI)	The MSCI ACWI Index, MSCI's flagship global equity index, is designed to represent performance of the full opportunity set of large- and mid-cap stocks across 23 developed and 24 emerging markets. As of May 2022, it covers more than 2,933 constituents across 11 sectors and approximately 85% of the free float-adjusted market capitalization in each market. The index is built using MSCI's Global Investable Market Index (GIMI) methodology, which is designed to take into account variations reflecting conditions across regions, market cap. Sizes, sectors, style segments and combinations.
MSCI Emerging Markets Index	The MSCI Emerging Markets Index captures large and mid-cap representation across 24 Emerging Markets (EM) countries. With 1,136 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country. For more information go to www.msci.com
MSCI World Index	The MSCI World Index captures large and mid-cap representation across 23 Developed Markets (DM) countries. With 1,634 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country. For more information go to www.msci.com
Nasdaq-100 Index	The Nasdaq-100 Index includes 100 of the largest domestic and international non-financial companies listed on The Nasdaq Stock Market based on market capitalization. The Index reflects companies across major industry groups including computer hardware and software, telecommunications, retail/wholesale trade and biotechnology. It does not contain securities of financial companies including investment companies. For more information go to www.nasdaq.com
S&P 500	Index is a widely recognized gauge of the U.S. equities market. This index is an unmanaged capitalization-weighted index consisting of 500 of the largest capitalization U.S. common stocks. The returns of the S&P 500 include the reinvestment of dividends. For more information go to https://eu.spindices.com/
STOXX Europe Mid 200 Index	The STOXX Europe Mid 200 Index is a fixed component number index designed to provide a representation of mid capitalization companies in Europe. The index is derived from the STOXX Europe 600 Index and covers Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland and the United Kingdom. For more information go to www.stoxx.com

GLOSSARY

Active management	Active management is the use of a human element, such as a single manager, co-managers or a team of managers, to actively manage a fund's portfolio. Active managers rely on analytical research, forecasts, and their own judgment and experience in making investment decisions on what securities to buy, hold and sell. The opposite of active management is passive management, better known as "indexing".
Ancillary assets	Assets which are not the main assets of a company.
Appreciation	An increase in the market value of an asset, such as a stock, bond, commodity or piece of real estate, or in the value of one currency with respect to another. The opposite of depreciation.
Asset	Any item of economic value owned by an individual or corporation, especially that which could be converted to cash. Examples are cash, securities, accounts receivable, inventory, office equipment, real estate, a car, and other property. On a balance sheet, assets are equal to the sum of liabilities, common stock, preferred stock, and retained earnings.
Asset class	An asset class is a group of securities that exhibits similar characteristics, behaves similarly in the marketplace and is subject to the same laws and regulations. The three main asset classes are equities, or stocks; fixed income, or bonds; and cash equivalents, or money market instruments. Some investment professionals add real estate, commodities, and increasingly, cryptocurrencies such as Bitcoin, to the asset class mix.
Balance of payments	Statement of a country's net financial transactions with other countries over a defined period of time.
Balance sheet	Financial statement that provides a snapshot of what a company owns and owes, as well as the amount invested by shareholders.
Bankers' acceptance	A bankers' acceptance (BA) is a short-term credit investment created by a non-financial firm and guaranteed by a bank to make payment. Acceptances are traded at discounts from face value in the secondary market.
Benchmark	A standard against which the performance of a fund can be measured and compared (eg. a stock market index such as the FTSE 100 or an interest rate, such as LIBOR).
Blue Chip company	The stock of a major company with a record of strong earnings, reliable dividend payments and steady share price performance. Blue chips are normally the largest capitalised stocks in a particular market and among the most widely traded.
Bond	A debt instrument issued for a period of more than one year with the purpose of raising capital by borrowing. Generally, a bond is a promise to repay the principal along with interest (coupons) on a specified date (maturity). Some bonds do not pay interest, but all bonds require a repayment of principal. When an investor buys a bond, he/she becomes a creditor of the issuer.
Buyback	A buyback, also known as a share repurchase, is when a company buys its own outstanding shares to reduce the number of shares available on the open market. Companies buy back shares for a number of reasons, such as to increase the value of remaining shares available by reducing the supply or to prevent other shareholders from taking a controlling stake.
Cash equivalents	Cash equivalents are investments securities that are for short-term investing, and they have high credit quality and are highly liquid. These securities have a low-risk, low-return profile and include Treasury bills, certificates of deposit, bankers' acceptances, commercial papers and other money market instruments.
Certificates of deposit (CDs)	Interest-bearing certificate issued by a bank to a depositor. Interest is paid at maturity.
Collective investment scheme	A type of investment scheme that involves collecting money from different investors and then combining all the money collected to fund the investment.
Compound interest	Earning interest on interest, or, more precisely, the interest earned on the sum of the principal amount and the interest already accumulated. A return on an investment is compounded if it takes into account compound interest, i.e. the interest is reinvested.

GLOSSARY (continued)

Commercial paper	A type of borrowing by companies and institutions in the form of loans where lenders do not have the right to take the assets of the borrower if they fail to repay. These loans are given for a period of a year or less.
Commodity	A good produced in bulk. Many commodities, such as coffee, meat and grain, and raw materials such as metals and oil, are traded on local, regional and/or international markets called commodity exchanges, either on a spot basis or through futures contracts, which allow the purchase or sale of a commodity at a predetermined price on a particular date in the future.
Common stock	<i>See Ordinary shares</i>
Consumer staples	Consumer staples are essential products, such as food, beverages, tobacco and household items. Consumer staples are goods that people are unable or unwilling to cut out of their budgets regardless of their financial situation (Investopedia).
Convertible bond	A bond issued by a company that has a set maturity date and pays interest in the form of a coupon. It has features of both a bond and stock and its valuation reflects both types of investments. It gives the holder the option to convert the bond into a specific number of shares of the issuing company – in other words, it has an 'embedded option'.
Corporate bond	A bond issued by a company.
Coupon	A term used to refer to the interest paid by a bond. It derives from the fact that bonds used to be issued as bearer documents (ie. certificates which do not identify the owner) with dated coupons attached to them. These were cut off the document when the payment of the interest was due and taken to a paying agent for the interest to be paid.
Country risk	Country risk is a term for the risks involved when someone invests in a particular country. Country risk varies from one country to the next, and can include political risk, exchange-rate risk, economic risk, and transfer risk. In particular, country risk denotes the risk that a foreign government will default on its bonds or other financial commitments. In a broader sense, country risk is the degree to which political and economic unrest affect the securities of issuers doing business in a particular country.
Credit rating	Ratings issued by credit ratings agencies which represent the agency's evaluation of qualitative and quantitative information for a company or government. Ratings are used to rank companies and governments on the probability of them defaulting on their obligations (i.e. to repay their debts).
Credit risk	Usually used when referring to investment in bonds, credit risk is the risk of a loss deriving from the inability of the issuer of a bond to make the interest payments and repay the capital at the end of the life of the bond in full and as scheduled should be Triple A' or 'investment grade rated' are assessed as being the lowest credit risk while non-investment grade bonds - also known as high-yield debt (or 'junk bonds') - are assessed as the highest credit risk. The higher the credit risk, the higher the interest rate the borrower will have to attract lenders
Currency forward	A binding contract in the foreign exchange market that locks in the exchange rate for the purchase or sale of a currency on a future date. A currency forward is essentially a hedging tool that does not involve any upfront payment.
Current account (Balance of payment current account)	Movements of money into and out of a country, relating to trade between private individuals, for example workers sending money to their families in another country. The current account includes the visible balance of trade (the net difference between exports and imports of merchandise goods) and the invisible trade balance (payments and receipts for services such as shipping, banking and tourism).
Debt security	Debt security refers to a debt instrument, such as a government bond, corporate bond, certificate of deposit (CD), municipal bond or preferred stock, that can be bought or sold between two parties and has basic terms defined, such as notional amount (amount borrowed), interest rate, and maturity and renewal date.
Deflation	Deflation is the general decline in prices for goods and services occurring when the inflation rate falls below 0%. Deflation happens naturally when the money supply of an economy is fixed. In times of deflation, the purchasing power of currency and wages are higher than they otherwise would have been.
Derivatives	Financial contracts such as futures, options and various securities that offer 'synthetic' access to an underlying asset such as a commodity, stock market or fixed income security. The price movements of a derivative generally follow the price movements of the underlying asset but derivatives generally require only small amounts of capital (margin) to gain exposure to the underlying asset.
Developed markets	Countries that have sound, well-established economies with a high level of economic growth and security. They are therefore thought to offer safer, more stable investment opportunities than developing markets.

GLOSSARY (continued)

Dividend	A dividend is the distribution of reward from a portion of company's earnings, and is paid to a class of its shareholders. Dividends are decided and managed by the company's board of directors, though they must be approved by the shareholders through their voting rights. Dividends can be issued as cash payments, as shares of stock, or other property, though cash dividends are the most common.
Dividend yield	See <i>Yield (3rd definition)</i>
Earnings per Share (EPS)	Profit, net of tax and dividends to preferred shareholders, divided by the total amount of ordinary shares outstanding. Most income statements include a calculation of earnings per share. This calculation tells you how much money shareholders would receive for each share of stock they own if the company distributed all of its net income for the period. In reality, however, companies would not distribute all of their earnings. Usually they reinvest them in the business.
Emerging markets	Emerging market is a term used to describe a developing country, in which investment would be expected to achieve higher returns but be accompanied by greater risk. Global index providers sometimes include in this category relatively wealthy countries whose economies are still considered underdeveloped from a regulatory point of view.
Equity	An ownership right representing an interest in a company.
Equity-linked security	A type of debt instrument whereby the return is linked to the performance of a group of underlying stocks or equities that are also linked to the security.
Equity swaps	An equity swap is an arrangement made in a futures contract whereby differences in settlement are made through cash payments, rather than by the delivery of physical goods or securities. This is generally an easier method of settlement, because both losses and gains are paid in cash. Equity swaps provide investors with all the benefits and risks of owning a security without actually owning it.
EPS	See <i>Earnings per share</i>
Exchange Traded Funds (ETFs)	Index-tracking funds that can be traded on exchanges just like a stock – so they combine the diversified holdings of a fund with the low cost and tradability of a share.
Exposure	Exposure (or market exposure) refers to the currency amount of funds, or percentage of a portfolio, invested in a particular type of security, market sector or industry, which is usually expressed as a percentage of total portfolio holdings. It represents the amount an investor can lose from the risks unique to a particular investment.
External account	See <i>Current account</i>
Financial derivative instruments	See <i>Derivatives</i>
Fixed income	Term used to denote bonds and other debt instruments, because they normally pay a fixed interest rate.
Foreign exchange	Foreign exchange is the exchange of one currency for another or the conversion of one currency into another currency. Foreign exchange also refers to the global market where currencies are traded virtually around the clock.
Forward contract	A forward contract is a customised contract between two counterparties to buy or sell a specific asset on a future date at an agreed price. As opposed to stocks and bonds, a forward contract is a derivative instrument, the value of which depends on an underlying asset. Unlike standard futures contracts, forward contracts are not traded on a centralised exchange and are highly customisable.
Free Cash Flow (FCF)	The cash a company has after all outgoings, including dividends, debt payments, tax, operating costs and capital expenditure.
Fund sector	Funds are into sectors to facilitate comparisons between funds with similar investment objectives and types of investment.
Futures contract	An agreement to buy or sell a stated amount of a security, currency or commodity at a specific future date and at a pre-agreed price.
GDP	See <i>Gross Domestic Product</i>
GNP	See <i>Gross National Product</i>
Government bond	Bonds issued by a government.
Gross Domestic Product (GDP)	The total value of an economy's domestic output of goods and services, which is one of the key indicators of economic growth with GNP.

GLOSSARY (continued)

Gross National Product (GNP)	Same as GDP except that it adds what a country earns from overseas investments and subtracts what foreigners earn in a country and send back home.
Index	An index is a portfolio of stocks, chosen according to simple, pre-defined rules, and designed to capture a particular investment style.
Inflation	Rate at which the general level of prices for goods and services is rising and, consequently, the purchasing power of currency is falling.
Interest rate	Interest rate is the amount charged, expressed as a percentage of principal, by a lender to a borrower for the use of assets. Interest rates are typically noted on an annual basis, known as the annual percentage rate (APR). The assets borrowed could include cash, consumer goods, and large assets such as a vehicle or building.
Liquidity	A relative term to describe the speed at which an asset or assets can be converted into cash (liquidated) and vice versa.
Listed	In relation to the shares of a company, or some funds, when those shares have been accepted for trading on an exchange they are referred to as 'listed' investments. The exchange will have 'listing requirements', which all companies/funds must meet before they are 'accepted for listing'. The opposite of listed is over-the-counter.
Local currency	The most commonly form of currency used in a country. This usually encompasses the national currency of the country.
Long position	A security that is bought in expectation that it will rise in value.
Market capitalisation	Market value of a company's issued share capital – in other words, the number of shares multiplied by the current price of those shares on the stock market. Companies are ranked as large-cap, mid-cap and small-cap depending on their market capitalisation (market cap), though the actual criteria for classification depend on the market concerned.
Maturity date	The maturity date is the date on which the principal amount of a debt instrument becomes due and is repaid to the investor and interest payments stop.
Money market instruments	Instruments used by government and companies and others who wish to borrow money for short periods, usually less than a year. They are also called short-term debt instruments. They include certificates of deposit, commercial paper and short-term gilts.
Municipal bond	A bond issued by a state or local government (or related entities) in the US to cover capital expenditures.
Option	A derivative instrument that gives the holder the right, without obligation, to buy (call) or sell (put) a security or asset at a fixed price within a specified period or at a particular future date.
Ordinary shares	Securities (called common stock in the US) that confer ownership in a publicly listed company. Holders are entitled to the dividends declared by the company and have the right to vote on the appointment of directors and other important matters. However they rank below holders of preferred shares.
Over the counter (OTC)	Generally refers to a stock (but can also refer to other financial instruments) that is not listed on an exchange and traded via a dealer network.
Overvalued	When a share price or market is trading at levels above those justified by fundamentals.
Overweight	Investment portfolio that holds an excess amount of a particular security when compared to the security's weight in the underlying benchmark portfolio. Actively managed portfolios will make a security overweight when doing so allows the portfolio to achieve excess returns. Overweight can also refer to an investment analyst's opinion that the security will outperform its industry, its sector or the entire market.
Passive management	Passive management is a style of management where a fund's portfolio mirrors a market index. Passive management is the opposite of active management. Passive management is also referred to as "passive strategy," "passive investing" or "index investing".
Preference shares	Also called preferred shares. Shares that entitle the holder to a fixed-rate dividend, paid before any dividend is distributed to holders of ordinary shares.
Preferred stock	See <i>Preference shares</i>
P/B Ratio	See <i>Price-to-Book Ratio</i>

GLOSSARY (continued)

Price-to-Book Ratio (P/B ratio)	The P/B ratio reflects the value that market participants attach to a company's equity relative to its book value (total assets minus total liabilities) of equity. A stock's market value is a forward-looking metric that reflects a company's future cash flows. The book value of equity is an accounting measure based on the historic cost principle, and reflects past issuances of equity, augmented by any profits or losses, and reduced by dividends and share buybacks. The higher the ratio, the higher the premium the market is willing to pay for the company above its hard assets. A low ratio may signal a good investment opportunity, but it could also mean something is fundamentally wrong with the company. The ratio is less meaningful for some types of companies, such as those in technology sectors. This is because such companies have hidden assets such as intellectual property which are of great value, but not reflected in the book value.
Primary market	The market for new securities issues. In the primary market the security is purchased directly from the issuer.
Quantitative analysis	Quantitative analysis (QA) is a technique that seeks to understand behaviour by using mathematical and statistical modelling, measurement, and research. Quantitative analysts aim to represent a given reality in terms of a numerical value. Quantitative analysis is employed for several reasons, including measurement, performance evaluation or valuation of a financial instrument, and predicting real-world events, such as changes in a country's gross domestic product (GDP).
Quantitative easing (QE)	Quantitative easing is an unconventional monetary policy in which a central bank purchases government securities or other securities from the market in order to lower interest rates and increase the money supply. Quantitative easing increases the money supply by flooding financial institutions with capital in an effort to promote increased lending and liquidity. When short-term interest rates are at or approaching zero, and when the printing of new banknotes isn't an option, quantitative easing can be considered.
Quantitative trading	A form of investing in which computers are used to sort through financial data and identify predictable patterns. Quantitative traders take advantage of modern technology, mathematics and the availability of comprehensive databases for making rational trading decisions to identify trading opportunities.
Reference index	An index used as a benchmark for performance comparison purposes but which is not a formal benchmark as per fund's prospectus.
Return on capital	The profit on an investment in relation to the amount invested which is not considered as a taxable event and not taxed as income.
Risk-adjusted return	Risk-adjusted return defines an investment's return by measuring how much risk is involved in producing that return, which is generally expressed as a number or rating. Risk-adjusted returns are applied to individual securities, investment funds and portfolios.
Secondary market	A market in which an investor purchases a security from another investor rather than the issuer, subsequent to the original issuance in the primary market.
Sector	A sector is an area of the economy in which businesses share the same or a related product or service. It can also be thought of as an industry or market that shares common operating characteristics. Dividing an economy into different pieces allows for more in-depth analysis of the economy as a whole.
Share	See <i>Equity</i>
Short position	Fund managers use this technique to borrow a security and then sell it with the intention of buying it back for less when the price falls. The position profits if the security falls in value. Within UCITS funds, derivatives – such as equity swaps – can be used to simulate a short position.
Security	A general term for stocks, bonds, options, subscription rights, warrants and other tradable investments that confer a right to income or ownership.
Sovereign debt	Sovereign debt is a central government's debt. It is debt issued by the national government in a foreign currency in order to finance the issuing country's growth and development. The stability of the issuing government can be provided by the country's sovereign credit ratings which help investors weigh risks when assessing sovereign debt investments.
Sovereign risk	See <i>Country Risk</i>
Stock	See <i>Equity</i>
Stock option	The right to buy or sell a particular stock at a given price on or after a certain date. Stock options are often used as an employee incentive at start-ups or large public companies.
Swap	An exchange of streams of payments between two parties, typically in order to reduce interest rate or currency risk.

GLOSSARY (continued)

Synthetic	Term given to financial instruments that are created artificially by simulating other instruments with different cash flow patterns. Synthetic products are structured to suit the cash flow needs of the investor. They are created in the form of a contract and, therefore, given the name "synthetic".
Transferable security	Any security that can be traded in the capital markets.
Treasury bill (T-bill)	A Treasury Bill (T-Bill) is a short-term debt obligation backed by the Treasury Department of the U.S. government with a maturity of less than one year, sold in denominations of \$1,000 up to a maximum purchase of \$5 million on non-competitive bids. T-bills have various maturities and are issued at a discount from par. Investors do not receive regular interest payments but a T-Bill does include interest, reflected in the amount it pays when it matures.
Total output	The total amount of goods and services produced within an economy.
Total return	Total return is the full return on an investment over a given period, including the income generated from dividend, interest or rental payments, and any gains or losses from a change in the asset's market value. This is normally expressed as a percentage of the purchase cost, annualised if the period is less than a year.
Undervalued	When a share price or market is trading at levels below those justified by fundamentals.
Underweight	An underweight portfolio does not hold a sufficient amount of a particular security when compared to the weight of that security held in the underlying benchmark portfolio. Underweight can also refer to an analyst's opinion regarding the future performance of a security in scenarios where it is expected to underperform.
Volatility	The extent to which the price of a security or commodity, or the level of a market, interest rate or currency, changes over time. High volatility implies rapid and large upward and downward movements over a relatively short period of time; low volatility implies much smaller and less frequent changes in value.
Warrant	A financial instrument, normally attached to a bond or other security that entitles the holder to purchase a certain amount of ordinary shares at a fixed price for a period of years or to perpetuity. The price at which the underlying shares can be bought or sold is referred to as the exercise price or strike price.
Yield	<ol style="list-style-type: none"> 1. The annual rate of return on an investment, expressed as a percentage. 2. For bonds and notes, the coupon rate divided by the market price. This is not an accurate measure of total return, since it does not factor in capital gains. 3. For securities, the annual dividends divided by the purchase price. This is not an accurate measure of total return, since it does not factor in capital gains. Here, also called dividend yield or current yield.

The Directors of Man Funds VI plc (the "Fund") herewith submit their report together with the audited financial statements for the year ended 31 December 2024.

Principal activities and review of the development of the business

The Fund was incorporated as an investment company with variable capital under the laws of Ireland as a public limited company on 28 November 2007 under registration number 449860. The Fund has been authorised by the Central Bank of Ireland (the "Central Bank") as an Undertaking for Collective Investment in Transferable Securities ("UCITS"), pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 (as amended), (the "UCITS Regulations") and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) (Amendment) Regulations 2019 (the "Central Bank UCITS Regulations"). The Fund is structured as an umbrella fund with segregated liability between sub-funds (each a "Portfolio"), and as at 31 December 2024 the Fund was comprised of twenty seven Portfolios and of which, twenty four Portfolios were in operation, as follows:

- Man Alpha Select Alternative;
- Man GLG European Equity Alternative (ceased operations on 13 May 2024);
- Man TargetRisk Global Equities;
- Man TargetRisk;
- Man European Mid-Cap Equity Alternative;
- Man Global Emerging Markets Debt Total Return;
- Man Innovation Equity Alternative;
- Man Alternative Style Risk Premia;
- Man Active Balanced;
- Man High Yield Opportunities;
- Man Event Driven Alternative;
- Man High Yield Opportunities DE;
- Man TargetRisk Moderate;
- Man Asia Pacific (ex-Japan) Equity Alternative;
- Man AHL Target Growth Alternative;
- Man GLG Convertible Arbitrage Alternative (ceased operations on 29 May 2024);
- Man RI Global Sustainable Growth Alternative;
- Man GLG Senior Secured Opportunities;
- Man European High Yield Opportunities;
- Man GLG RI Sustainable Credit Opportunities (ceased operations on 13 November 2024);
- Man TargetClimate;
- Man Emerging Markets Corporate Credit Alternative;
- Man European Leaders Alternative;
- Man Financial Credit Opportunities;
- Man Global Technology Equity Alternative (commenced operations on 3 April 2024);
- Man Systematic RI Equity Alternative (commenced operations on 17 June 2024); and
- Man Dynamic Diversification (commenced operations on 3 December 2024).

Results for the year and state of affairs at 31 December 2024 and future Developments

For a detailed commentary on the results for the year and the state of affairs of the Fund at 31 December 2024 see the Investment Manager's reports, the statement of financial position, the statement of comprehensive income and the schedule of investments. All Classes of Redeemable Participating Shares are together known as the "Redeemable Participating Shares" or "Shares".

The returns of the classes of all the Portfolios for the year end are disclosed in the tables below:

The Directors do not propose the payment of a dividend for any of the other share classes in the other Portfolios.

Future developments

The Fund will continue to pursue the Portfolios' investment objectives as outlined in note 1.

Significant events during the year

Prospectus

A new Supplement for the GLG Partners LP Portfolios was issued on 8 February 2024 to the Prospectus dated 1 December 2022. The amendments to the Prospectus reflected the removal of ICE BofA European Currency High Yield Constrained Index (Hedged) benchmark from Man High Yield Opportunities and Man High Yield Opportunities DE and noted the addition of new share classes to certain Portfolios.

A new Supplement for the GLG Partners LP Portfolios was issued on 14 March 2024 to the Prospectus dated 1 December 2022. The amendment to the Prospectus reflected the launch of Man Global Technology Equity Alternative and noted the addition of new share classes to certain Portfolios.

A new Supplement for the Numeric Investors LLC Portfolio was issued on 9 May 2024 to the Prospectus dated 1 December 2022. The amendment to the Prospectus reflected the launch of Man Systematic RI Equity Alternative.

Effective 11 July 2024 a revised Supplement for Man Solutions Limited Portfolios was issued. It provided for amendments to permitted investments and strategy flexibility for Man Alternative Style Risk Premia and increase in timing for trading for both Man Alternative Style Risk Premia and Man TargetRisk Global Equities.

A new Supplement for the Man Solutions Limited Portfolios was issued on 3 September 2024 to the Prospectus dated 1 December 2022. The amendment to the Prospectus reflected the launch of Man Dynamic Diversification.

A new Supplement for the Man Solutions Portfolios was issued on 1 November 2024, noting a management fee increase for Man Dynamic Diversification.

An updated Prospectus was issued dated 11 November 2024 along with updated Supplements to the GLG Partners LP Portfolios, GLG LLC Portfolios and Numeric Investors LLC Portfolios also dated 11 November 2024. The updates reflected the Portfolios name changes as disclosed previously in the financial statements along with other general prospectus updates.

Portfolios

Man Global Technology Equity Alternative, Man Systematic RI Equity Alternative and Man Dynamic Diversification commenced their operations on 3 April 2024, 17 June 2024 and 3 December 2024, respectively.

Man GLG European Equity Alternative, Man GLG Convertible Arbitrage Alternative and Man GLG RI Sustainable Credit Opportunities ceased their operations on 13 May 2024, 29 May 2024 and 13 November 2024, respectively.

Share Classes

For detailed information on new share classes launched during the year please refer to note 22.

The Directors, Investment Managers and the Manager acknowledge the current crisis in Ukraine and all applicable Russian related sanctions. The Investment Managers reviewed the positions held across Man Funds VI plc for any Russian and Ukrainian exposure. Appropriate action has been taken to reduce or remove certain direct exposures to Russia, where necessary, and the situation is under ongoing review.

The ongoing political instability in the region is an additional risk factor which is being monitored and could impact the valuation of the Fund's assets after the year end.

Furthermore, there were no other significant events during the year ended 31 December 2024.

Subsequent events since the year end

Dividends proposed for the year ended 31 December 2024 were paid on 10 January 2025.

Man Innovation Equity Alternative ceased its operations on 14 April 2025.

Man RI Global Sustainable Growth Alternative ceased its operations on 22 April 2025.

Following the end of the year, the US government introduced a 10% minimum tariff on most imported goods, along with higher reciprocal tariffs on a broad range of countries. This led to significant uncertainty regarding the economic outlook, as market participants scrambled to assess the potential impacts on both growth and inflation. Consequently, equity markets experienced a severe correction, although they partially recovered some of the losses thereafter. The AIFM will continue to monitor the situation closely.

There have been no other significant events since the year end that impact the Fund and require disclosure in the financial statements.

Investment objectives

The investment objectives of each sub-fund are as stated in note 1. Investment in the Fund carries with it a degree of risk including but not limited to the risks referred to in note 6 of these financial statements. For a more detailed description of risks associated with investment in the Fund, please refer to the Prospectus.

Directors and Secretary

The Directors and Secretary during the year and up to 28 April 2025 are listed on page 3. Unless indicated, they served for the entire financial year.

Directors' and Secretary's interests

Neither the Directors, nor their families, nor the secretary (Matsack Trust Limited), nor the Investment Manager had any interests in the Shares of the Fund during the year ended 31 December 2024, with the exception of one Subscriber Shares held by Man Asset Management (Ireland) Limited in a nominee capacity. The Directors' remuneration for the year ended 31 December 2024 and 31 December 2023 is disclosed in note 9 of these financial statements.

Directors' responsibilities

The Directors are responsible for preparing the Directors' Report and the financial statements in accordance with Irish law. Irish company law requires the Directors to prepare financial statements giving a true and fair view of the state of affairs of the Fund and the profit or loss of the Fund for each financial year. Under that law the Directors have elected to prepare the financial statements in accordance with International Financial Reporting Standards ("IFRS") as adopted by the European Union. Under company law, the directors must not approve the financial statements unless they are satisfied that they give a true and fair view of the assets, liabilities and financial position of the company as at the financial year end date and of the profit or loss of the Fund for the financial year and otherwise comply with the Companies Act 2014 (as amended).

In preparing these financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgments and accounting estimates that are reasonable and prudent;
- state whether the financial statements have been prepared in accordance with applicable accounting standards and identify the standards in question and note the effects and the reasons for any material departure from those standards; and prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Fund will continue in business. The financial statements are prepared on going concern basis. We do note that the following sub-funds individually ceased operations during the year; Man GLG European Equity Alternative, Man GLG Convertible Arbitrage Alternative and Man GLG RI Sustainable Credit Opportunities ceased operations on 13 May 2024, 29 May 2024 and 13 November 2024, respectively and are therefore, not prepared on a going concern basis.

The Directors are responsible for ensuring that the Fund keeps or causes to be kept adequate accounting records which correctly explain and record the transactions of the company, enable at any time the assets, liabilities, financial position and profit or loss of the Fund to be determined with the reasonable accuracy, enable them to ensure that the financial statements and Directors' report comply with the Companies Act 2014 (as amended). The Directors delegate this function to the Administrator.

They are also responsible for safeguarding the assets of the Fund and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities. Legislation in Ireland governing the preparation and dissemination of financial statements may differ from legislation in other jurisdictions.

Accounting records

The Directors are responsible for ensuring that proper accounting records as outlined in Section 281 to 285 of the Companies Act 2014 (as amended) are kept by the Fund. To achieve this, the Directors have appointed an experienced third party fund administrator to ensure that the requirements of Section 281 to 285 of the Companies Act 2014 (as amended) are complied with. The books and accounting records are maintained at the Administrator's office at One Dockland Central, Guild Street, IFSC, Dublin 1, Ireland.

Independent Auditor

Deloitte Ireland LLP will continue in office in accordance with Sections 383 (2) of the Companies Act 2014 (as amended).

Corporate governance

The European Communities (Directive 2006/46/EC) Regulations (S.I. 450 of 2009 and S.I. 83 of 2010) requires the inclusion of a corporate governance statement in the Directors' Report. Although there is no specific statutory corporate governance code applicable to Irish collective investment schemes, the Fund is subject to corporate governance practices imposed by:

- i) The Irish Companies Act 2014 which is available for inspection at the registered office of the Fund;
- ii) The Articles of Association of the Fund which are available for inspection at the registered office of the Fund;
- iii) The Central Bank in their UCITS Notices and Guidance Notes which can be obtained from the Central Bank website at: <https://www.centralbank.ie/regulation/industry-market-sectors/funds/ucits> and are available for inspection at the registered office of the Fund.

The Irish Funds ("IF") has published the IF Code that may be adopted on a voluntary basis by Irish authorised collective investment schemes. It should be noted that the IF Code reflects existing corporate governance practices imposed on Irish authorised collective investment schemes, as noted above. If the IF Code is adopted on a voluntary basis, it can be referred to in the disclosures made in the Directors' Report in compliance with the provisions of the European Communities (Directive 2006/46/EC) Regulations (i.e. S.I. 450 of 2009 and S.I. 83 of 2010).

The Board of Directors is responsible for establishing and maintaining adequate internal control and risk management systems of the Fund in relation to the financial reporting process. Such systems are designed to manage rather than eliminate the risk of error or fraud in achieving the Fund's financial reporting objectives and can only provide reasonable and not absolute assurance against material misstatement or loss.

Corporate governance (continued)

The Board of Directors has procedures in place to ensure all relevant books of account are properly maintained and are readily available, including production of annual financial statements. The annual financial statements of the Fund are required to be approved by the Board of Directors of the Fund and the annual financial statements of the Fund are required to be filed with the Central Bank. The statutory financial statements are required to be audited by independent auditors who report annually to the board on their findings.

The Board of Directors evaluates and discusses significant accounting and reporting issues as the need arises.

The convening and conduct of shareholders' meetings are governed by the Articles of Association of the Fund and the Companies Act. Although the Directors may convene an extraordinary general meeting of the Fund at any time, the Directors are required to convene an annual general meeting of the Fund within twelve months of the date of the previous annual general meeting. Shareholders representing not less than ninety-five per cent of the paid up share capital of the Fund may also request the directors to convene a shareholders' meeting. Not less than twenty one days' notice of every annual general meeting and any meeting convened for the passing of a special resolution must be given to shareholders and fourteen days' notice must be given in the case of any other general meeting unless the auditors of the Fund and all the shareholders of the Fund entitled to attend and vote agree to shorter notice.

Two members present either in person or by proxy constitute a quorum at a general meeting.

The Fund may from time to time by ordinary resolution increase the share capital by such amount and/or number as the resolution may prescribe.

The Fund may also by ordinary resolution:

- 1) consolidate all or any of its share capital into Shares of larger amount;
- 2) subject to the provision of the Companies Act subdivide its Shares, or any of them, into Shares of smaller amount or value and provide for any of such Shares resulting from such sub-division to have, as compared with the others, any such preferred, deferred or other rights or be subject to any such restrictions as the Fund has power to attach to unissued or new Shares;
- 3) cancel any Shares which, at the date of the passing of the resolution, have not been taken or agreed to be taken by any person and reduce the amount of its authorised share capital by the amount of the Shares so cancelled; or
- 4) re-denominate the currency of any class of Shares.

Every holder of participating shares or non-participating shares present in person or by proxy who votes on a show of hands is entitled to one vote. On a poll, every holder of participating shares present in person or by proxy is entitled to one vote in respect of each share held by him and every holder of non-participating shares is entitled to one vote in respect of all non-participating shares held by him.

Shareholders may resolve to sanction an ordinary resolution or special resolution at a shareholders' meeting. An ordinary resolution of the Fund requires a simple majority of the votes cast by the shareholders voting in person or by proxy at the meeting at which the resolution is proposed. A special resolution of the Fund requires a majority of not less than seventy five per cent of the shareholders present in person or by proxy and voting in general meeting in order to pass a special resolution including a resolution to amend the Articles of Association.

Unless otherwise determined by an ordinary resolution of the Fund in general meeting, the number of Directors may not be less than one nor more than ten. Currently the Board of Directors of the Fund is composed of four Directors, being those listed in the corporate information in these financial statements.

The business of the Fund is managed by the Directors, who exercise all such powers of the Fund as are not by the Companies Act 2014 (as amended) or by the Articles of Association of the Fund required to be exercised by the Fund in general meeting.

A Director may, and the company secretary of the Fund on the requisition of a Director will, at any time summon a meeting of the Directors. Questions arising at any meeting of the Directors are determined by a majority of votes. In the case of an equality of votes, the chairperson shall not have a casting vote and the resolution shall fail. The quorum necessary for the transaction of business at a meeting of the Directors is two.

The Board has adopted the voluntary Irish Funds (IF) Corporate Governance Code for Irish Domiciled Collective Investment Schemes and Management Companies, issued 14 December 2011 (the "Code"), with effect from 31 December 2012. The Board has reviewed and assessed the measures included in the Code and considers its corporate governance practices and procedures since the adoption of the Code as consistent therewith.

The Directors acknowledge that they are responsible for securing the Fund's compliance with the relevant obligations as set out in section 225 of the Companies Act 2014 (as amended).

The Directors confirm that:

- 1) A compliance policy document has been drawn up that sets out policies, that in our opinion are appropriate to the Fund, respecting compliance by the Fund with its relevant obligations
- 2) appropriate arrangements or structures are in place that are, in our opinion, designed to secure material compliance with the Funds relevant obligations, and
- 3) during the financial year, the arrangements or structures referred to in (2) have been reviewed.

The Directors confirm that during the financial year end 31 December 2024:

- a. so far as the Directors are aware, there is no relevant audit information of which the Fund's statutory auditors are unaware; and
- b. the Directors have taken all steps that ought to have been taken by the Directors in order to make themselves aware of any relevant audit information and to establish that the Fund's auditors are aware of that information.

Corporate governance (continued)

Audit Committee

The Board of Directors has decided it was not necessary to constitute an audit committee given the frequency of the meetings of the Board throughout the year and the size of the Board of Directors. Instead, it is deemed more appropriate that the entirety of the Board of Directors carry out the activities that would otherwise be carried out by an audit committee.

The Fund has adopted the corporate governance code for collective investment schemes and management companies issued by the Irish Funds (the "IF Code"). The Directors are satisfied that they act independently and in the interests of the Fund as a whole and have determined that Samantha McConnell, Bronwyn Wright and Ronan Daly are independent directors, as defined in the IF Code.

Custody and title risk

The Depositary is under a duty to take into custody such financial instruments that can be held in custody and to hold such assets of each Portfolio of the Fund on behalf of its shareholders. The Central Bank of Ireland requires the Depositary to hold separately the non-cash assets of each Portfolio and to maintain sufficient records to clearly identify the nature and amount of all assets that it holds, the ownership of each asset and where the documents of title to such assets are physically located. When the Depositary employs a sub-custodian the Depositary retains responsibility for the assets of the Portfolio save where it has discharged itself of liability in accordance with the relevant EU Directive.

However, it should be noted that not all jurisdictions have the same rules and regulations as Ireland regarding the custody of assets and the recognition of the interests of a beneficial owner such as a Portfolio. Therefore, in such jurisdictions, there is a risk that if a Sub-Custodian becomes bankrupt or insolvent, the Portfolio's beneficial ownership of the assets held by such Sub-Custodian may not be recognised and consequently the creditors of the Sub-Custodian may seek to have recourse to the assets of the Portfolio. In those jurisdictions where the Portfolio's beneficial ownership of its assets is ultimately recognised, the Portfolio may suffer delay and cost in recovering those assets. The Portfolios may invest in markets where custodial and/or settlement systems are not fully developed, the assets of a Portfolio which are traded in such markets and which have been entrusted to sub-custodians, in circumstances where the use of such sub-custodians is necessary, may be exposed to risk in circumstances whereby the Depositary will have no liability.

CRS Data Protection Information Notice

The Board hereby provides the following data protection information notice to all shareholders in the Portfolio either as at 31 December 2024 or at any point of time since this date.

For the avoidance of doubt, this notice applies equally to any shareholders that have ceased to hold shares in the Portfolio since 1 January 2024. Furthermore, it should be noted that this notice may be applicable to Controlling Persons of certain shareholders.

The Portfolio hereby confirms that it intends to take such steps as may be required to satisfy any obligations imposed by (i) the OECD's Standard for Automatic Exchange of Financial Account Information in Tax Matters (the "Standard"), which therein contains the Common Reporting Standard ("CRS"), as applied in Ireland by means of the relevant international legal framework and Irish tax legislation and (ii) EU Council Directive 2014/107/EU, amending Directive 2011/16/EU as regards mandatory automatic exchange information in the field of taxation ("DAC2"), as applied in Ireland by means of the relevant Irish tax legislation, so as to ensure compliance or deemed compliance (as the case may be) with the Standard/CRS and the DAC2.

In this regard, the Manager on behalf of the Fund is obliged under Section 891F and Section 891G of the Irish Taxes Consolidation Act, 1997 (as amended) and regulations made pursuant to those sections to collect certain information about each shareholder's tax arrangements (and also collect information in relation to relevant Controlling Persons of specific shareholders).

In certain circumstances, the Manager on behalf of the Fund may be legally obliged to share this information and other financial information with respect to a shareholder's interests in the Portfolio with the Irish Revenue Commissioners (and, in particular situations, also share information in relation to relevant Controlling Persons of specific shareholders). In turn, and to the extent the account has been identified as a Reportable Account, the Irish Revenue Commissioners will exchange this information with the country of residence of the Reportable Person(s) in respect of that Reportable Account.

In particular, information that may be reported in respect of a shareholder (and relevant Controlling Persons, if applicable) includes name, address, date of birth, place of birth, account number, account balance or value at year end (or, if the account was closed during such year, the balance or value at the date of closure of the account), any payments (including redemption and dividend/interest payments) made with respect to the account during the calendar year, tax residency(ies) and tax identification number(s).

Connected party transactions

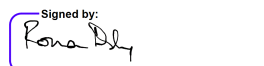

The Directors are satisfied that there are arrangements, as evidenced by written procedure, in place to ensure that transactions carried out with connected parties of the Fund are carried out as if negotiated at arm's length and any such transactions are in the best interests of the Shareholders of the Fund. The Directors are satisfied that any transactions entered into with connected parties during the year complied with the aforementioned obligation.

All transactions with the connected parties were entered into in the ordinary course of business and on normal commercial terms.

On behalf of the Board

REPORT FROM THE DEPOSITARY TO THE SHAREHOLDERS

For the period from 1 January 2024 to 31 December 2024 (the “**Period**”)

The Bank of New York Mellon SA/NV, Dublin Branch (the “**Depository**” “**us**”, “**we**”, or “**our**”) has enquired into the conduct of Man Funds VI plc (the “**Company**”) for the Period, in its capacity as Depository to the Company.

This report including the opinion has been prepared for and solely for the shareholders in the Company, in accordance with our role as Depository to the Company and for no other purpose. We do not, in giving this opinion, accept or assume responsibility for any other purpose or to any other person to whom this report is shown.

Responsibilities of the Depository

Our duties and responsibilities are outlined in Regulation 34 of the of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 (S.I. No 352 of 2011), as amended (the “**Regulations**”).

Our report shall state whether, in our opinion, the Company has been managed in that period in accordance with the provisions of the Company’s constitutional documentation and the Regulations. It is the overall responsibility of the Company to comply with these provisions. If the Company has not been so managed, we as Depository must state in what respects it has not been so managed and the steps which we have taken in respect thereof.

Basis of Depository Opinion

The Depository conducts such reviews as it, in its reasonable opinion, considers necessary in order to comply with its duties and to ensure that, in all material respects, the Company has been managed (i) in accordance with the limitations imposed on its investment and borrowing powers by the provisions of its constitutional documentation and the appropriate regulations and (ii) otherwise in accordance with the Company’s constitutional documentation and the appropriate regulations.

Opinion

In our opinion, the Company has been managed during the Period, in all material respects:

- (i) in accordance with the limitations imposed on the investment and borrowing powers of the Company by the constitutional documentation and the Regulations; and
- (ii) otherwise in accordance with the provisions of the constitutional documentation and the Regulations.

For and on behalf of The Bank of New York Mellon SA/NV, Dublin Branch,
Riverside II,
Sir John Rogerson's Quay,
Dublin 2,
Ireland.

**Man GLG Core Economy Alternative ceased its operations on 4 December 2023.

*Man Emerging Markets Corporate Credit Alternative, Man European Leaders Alternative and Man Financial Credit Opportunities commenced their operations on 7 February 2023, 6 June 2023 and 27 June 2023, respectively.

The accompanying notes form an integral part of these financial statements.

1. General

Man Funds VI plc (the “Fund”) was incorporated as an investment company with variable capital and segregated liability between sub-funds under the laws of Ireland as a public limited company on 28 November 2007 under registration number 449860. The Fund has been authorised by the Central Bank of Ireland (the “Central Bank”) as an Undertaking for Collective Investment in Transferable Securities (“UCITS”), pursuant to the European Communities (Undertaking for Collective Investment in Transferable Securities) Regulations 2011 (as amended) (the “UCITS Regulations”) and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) (Amendments) Regulations 2019 (the “Central Bank UCITS Regulations”). The Fund’s investment manager is GLG LLC for GLG LLC Portfolios, GLG Partners LP for Man GLG Portfolios, AHL Partners LLP for Man AHL Portfolios, Man Solutions Limited for Man Solution Portfolios and Numeric Investors LLC for Man Numeric Portfolios (the “Investment Managers”). The Fund’s registered office is at 70 Sir John Rogerson’s Quay, Dublin, Ireland. The Fund has no employees.

The Fund is structured as an umbrella fund with segregated liability between sub-funds (each a “Portfolio”) which means that different Portfolios may be created from time to time by the Directors with the approval of the Central Bank. Each Portfolio will be represented by a different series of Redeemable Participating Shares (the “Shares”) and will be invested in accordance with the investment objectives and policies applicable to such Portfolio. As at 31 December 2024 the Fund was comprised of twenty seven Portfolios, of which twenty four Portfolios were in operation, as follows:

GLG LLC Portfolio

- Man Global Emerging Markets Debt Total Return;
- Man Event Driven Alternative; and
- Man GLG Convertible Arbitrage Alternative (ceased operations on 29 May 2024).

1. General (continued)

- Man AHL Target Growth Alternative;
- Man RI Global Sustainable Growth Alternative;
- Man GLG Senior Secured Opportunities;
- Man European High Yield Opportunities;
- Man TargetClimate;
- Man Emerging Markets Corporate Credit Alternative;
- Man European Leaders Alternative;
- Man Financial Credit Opportunities;
- Man Global Technology Equity Alternative;
- Man Systematic RI Equity Alternative; and
- Man Dynamic Diversification.

The investment objectives and policies of each active Portfolio are detailed below.

Man Alpha Select Alternative

Man Alpha Select Alternative's investment objective is to provide investors with positive returns through investments primarily in the United Kingdom securities markets.

The Portfolio invests primarily in common stock and other equity and equity-linked securities (which may include but are not limited to such instruments as options and swaps) of issuers in the United Kingdom or of issuers which derive a substantial part of their revenues from activities in the United Kingdom and may invest the remainder in equity and equity linked securities of issuers and on markets located outside the United Kingdom. The Portfolio may also invest in rights (including sub-underwriting).

As at 31 December 2024, Class DL GBP, Class DL H EUR, Class DL H USD, Class DLY H EUR, Class DN H CHF, Class DN H USD, Class DNRW H EUR, Class DNY H EUR, Class IL GBP, Class IL GBP Dist, Class IL H EUR, Class IL H EUR Dist, Class IL H SEK, Class IL H USD, Class IL H USD Dist, Class IL U GBP, Class IN GBP, Class IN H CHF, Class IN H EUR, Class IN H EUR Dist, Class IN H SEK and Class IN H USD were in operation.

Man GLG European Equity Alternative

Man GLG European Equity Alternative's investment objective was to provide investors with positive returns primarily through investments in issuers in Europe and of issuers which derived a substantial part of their revenues from activities in Europe.

The Portfolio's policy was to achieve those returns through investments in short, medium and, to a lesser extent, long-term investment opportunities. This policy was pursued through a strategy of active trading with the Portfolio primarily invested in listed equities including, without limitation, common stock and other equity and equity-linked securities (which might included, but were not limited to, such instruments as options and swaps), of issuers in Europe and of issuers which derived a substantial part of their revenues from activities in Europe.

Man GLG European Equity Alternative ceased its operations on 13 May 2024.

Man TargetRisk Global Equities

Man TargetRisk Global Equities aims to generate capital growth over the medium term by providing risk managed dynamic exposure to a portfolio of global equity securities and financial derivative instruments.

The Portfolio may seek to achieve its investment objectives and policies by (a) direct exposure : The Portfolio will seek to achieve its objective through a dynamically risk managed global equity portfolio. The dynamic, risk managed approach means that the Investment Manager seeks to manage market exposure of the portfolio in an active, risk-aware manner so as to control downside risk, via short positions in liquid equity index futures and/or (b) indirectly through the use of one or more total return swaps ("TRS").

As at 31 December 2024, Class D USD, Class D H EUR, Class I USD, Class I H EUR, Class I H GBP and Class I H SEK were in operation.

Man TargetRisk

The Man TargetRisk Portfolio aims to generate capital growth over the medium to long term.

The Portfolio seeks to achieve its objective by allocating all or substantially all of its assets in accordance with a proprietary quantitative model, the 'Man TargetRisk' strategy, by providing dynamic long only exposure to a range of assets and to provide an excess return stream with a stable level of volatility regardless of market conditions.

As at 31 December 2024, Class D USD, Class D H CHF, Class D H EUR, Class D H GBP, Class D H SEK, Class D H SGD, Class DJ USD, Class DRV USD, Class DRW H EUR, Class DU USD Dist, Class DU H HKD Dist, Class DU H SGD Dist, Class DV USD, Class DW USD, Class I USD, Class I H AUD, Class I H (BRL) USD, Class I H CHF, Class I H EUR, Class I H GBP, Class I H JPY, Class I H SEK, Class I H SGD, Class INU USD Class INU H CHF, Class INU H EUR, Class INU H GBP, Class IV USD and IX H GBP were in operation.

Man European Mid-Cap Equity Alternative

The Portfolio's investment objective is to seek to provide an attractive risk-adjusted total return, through appreciation and income.

The Portfolio seeks to achieve these returns primarily through long and synthetically short investments in equity securities or equity derivatives. The Portfolio may invest up to 20% of its Net Asset Value in emerging markets.

As at 31 December 2024, Class DN EUR, Class DN H USD, Class IN EUR, Class IN H GBP, Class IN H SEK, Class IN H USD, Class INF H GBP and Class INF H USD were in operation.

1. General (continued)

Man Global Emerging Markets Debt Total Return

Man Global Emerging Markets Debt Total Return's investment objective is to achieve a return in all market conditions over the long term primarily through investment in a portfolio of fixed income securities denominated in local currency or in the currencies of OECD countries and/or derivatives.

As at 31 December 2024, Class D USD, Class D H CHF, Class D H EUR, Class D H GBP, Class D H NOK, Class DL H EUR, Class DMF USD, Class DMF H EUR, Class DR USD Dist, Class DRW H EUR, Class DY H EUR, Class I USD, Class I USD Dist, Class I H CHF, Class I H EUR, Class I H GBP, Class I H SEK, Class IL USD, Class IL H EUR, Class IMF USD, Class IMF USD Dist, Class IMF H EUR, Class IMF H EUR Dist and Class IMF H GBP Dist were in operation.

Man Innovation Equity Alternative

Man Innovation Equity Alternative's investment objective is to provide investors with absolute returns by taking both long and short positions in equities issued by companies globally.

The Portfolio seeks to apply a long/short investment strategy and intends to take full advantage of the ability to invest in derivatives providing long and "synthetic short" positions.

As at 31 December 2024, Class DN USD, Class DN H CHF, Class DN H EUR, Class DNRW H EUR, Class IN USD, Class IN H CHF, Class IN H EUR, Class IN H GBP, Class IN H SEK, Class INF USD, Class INF H EUR, Class INF H GBP, Class INU H EUR, Class INU H GBP and Class IXN H EUR were in operation.

Man Alternative Style Risk Premia

Man Alternative Style Risk Premia's investment objective is to achieve medium-term absolute returns in all market conditions across liquid asset classes.

The Portfolio seeks to achieve its objective by allocating all or substantially all of its assets in accordance with the Styles and Strategies adopted such as by investing all or part of the net proceeds of Shares in transferable securities listed or traded on recognised markets, exchange-traded and OTC financial derivative instruments, collective investment schemes and through TRS linked to the performance of a reference basket.

As at 31 December 2024, Class D USD, Class D H DKK, Class D H EUR, Class D H NOK, Class D H SEK, Class I USD, Class I H AUD, Class I H DKK, Class I H EUR, Class I H GBP, Class I H NZD, Class I H SEK, Class INU USD and IU H GBP were in operation.

Man Active Balanced

The Man Active Balanced aims to generate capital growth over the medium to long term by providing dynamic exposure to a range of assets and to provide an excess return stream with a stable level of volatility regardless of market conditions.

The Portfolio seeks to achieve its objective by allocating all or substantially all of its assets in accordance with a proprietary quantitative model, the 'Man Active Balanced' strategy, to provide an excess return stream with a stable level of volatility regardless of market conditions.

As at 31 December 2024, Class I H EUR, Class I H GBP, Class I H JPY and Class I H USD were in operation.

Man High Yield Opportunities

Man High Yield Opportunities' investment objective is to provide income and capital growth by investing directly or indirectly in fixed and floating rate securities worldwide.

The Portfolio seeks to achieve its objective by allocating all or substantially all of its assets in accordance with the investment approach adopted such as by investing all or part of the net proceeds of Shares in transferable securities, exchange traded and OTC financial derivative instruments, money market instruments, other collective investment schemes and deposits, cash or cash equivalents.

As at 31 December 2024, Class D EUR, Class D EUR G-Dist, Class D H CHF, Class D H SGD, Class D H USD, Class D H HKD Dist, Class D H SGD Dist, Class D H USD Dist, Class DRW H EUR, Class DV H USD, Class DV H USD G-Dist, Class DW H USD, Class DY H HKD Dist, Class DY H SGD Dist, Class DY H USD Dist, Class I EUR, Class I EUR Dist, Class I H (BRL) EUR, Class I H CHF, Class I H GBP, Class I H GBP G-Dist, Class I H USD, Class I H USD Dist, Class I H USD G-Dist, Class IF EUR, Class IF H GBP, Class IF H GBP Dist, Class IF H GBP G-Dist, Class ILU H GBP G-Dist, Class IU H USD, Class IV H USD, Class IV H USD G-Dist, Class IXU H GBP, and Class IXX EUR, were in operation.

Man Event Driven Alternative

Man Event Driven Alternative's investment objective is to provide investors with absolute returns over a rolling three-year period by taking both long and short positions utilising event driven strategies.

The Portfolio seeks to apply a long/short investment strategy and intends to take full advantage of the ability to invest in derivatives providing long and "synthetic short" positions.

As at 31 December 2024, Class DN USD, Class DN H CHF, Class DN H EUR, Class DNFY USD, Class DNFY H EUR, Class DNRW H EUR, Class IN USD, Class IN H CHF, Class IN H EUR, Class IN H GBP, Class IN H SEK, Class INF USD, Class INF H EUR, Class INU H EUR, Class IU USD, Class INXX H EUR and IXN H EUR were in operation.

1. General (continued)

Man High Yield Opportunities DE

Man High Yield Opportunities DE's investment objective is to provide income and capital growth by investing directly or indirectly in fixed and floating rate securities worldwide.

As at 31 December 2024, Class I EUR, Class I EUR Dist and Class ILU EUR G-Dist were in operation.

Man TargetRisk Moderate

Man TargetRisk Moderate aims to generate capital growth over the medium to long term by providing dynamic long and short exposure to a range of assets and to provide a return stream with a stable level of volatility regardless of market conditions.

The Portfolio seeks to achieve its objective by allocating all or substantially all of its assets in accordance with a proprietary quantitative model, the 'Man TargetRisk' strategy, to provide a return stream with a stable level of volatility regardless of market conditions.

As at 31 December 2024, Class D H EUR, Class I USD, Class I H CHF and Class I H EUR were in operation.

Man Asia Pacific (ex-Japan) Equity Alternative

Man Asia Pacific (ex-Japan) Equity Alternative's investment objective is to provide investors with an absolute return through a long/short strategy investing primarily in Asia Pacific (ex-Japan).

The Portfolio seeks to apply a long/short investment strategy and intends to take full advantage of the ability to invest in derivatives providing long and "synthetic short" positions.

As at 31 December 2024, Class DNRW H EUR, Class IN USD, Class IN H EUR, Class IN H GBP, Class IN H SEK, Class INF USD, Class INF H EUR, Class INF H GBP and Class IU H GBP were in operation.

Man AHL Target Growth Alternative

The Man AHL Target Growth Alternative aims to achieve long-term capital growth through risk-controlled exposure to broad market moves and complementary investment styles.

The Portfolio seeks to achieve its objective by allocating all or substantially all of its assets in accordance with a proprietary quantitative model, the 'Man AHL Target Growth' strategy.

As at 31 December 2024, Class D H EUR, Class I USD, Class I H EUR, Class I H GBP, Class IF H GBP and Class IF H JPY were in operation.

Man GLG Convertible Arbitrage Alternative

Man GLG Convertible Arbitrage Alternative's investment objective was to provide investors with an absolute return through a long/short strategy investing primarily in convertible bonds.

The Portfolio sought to apply a long/short investment strategy and intended to take full advantage of the ability to invest in derivatives providing long and "synthetic short" positions.

Man GLG Convertible Arbitrage Alternative ceased its operations on 29 May 2024.

Man RI Global Sustainable Growth Alternative

Man RI Global Sustainable Growth Alternative's investment objective is to provide investors with an absolute return by taking both long and short positions in equities issued by companies globally.

The Portfolio seeks to apply a long/short investment strategy and intends to take full advantage of the ability to invest in derivatives providing long and "synthetic short" positions.

As at 31 December 2024, Class IN USD, Class IN H EUR, Class IN H GBP, Class INF H EUR and Class IU H GBP were in operation.

Man GLG Senior Secured Opportunities

Man GLG Senior Secured Opportunities' investment objective is to provide income and capital growth by investing directly or indirectly in senior secured fixed income securities.

The Portfolio's policy is to achieve returns through investing primarily, directly or indirectly, in a portfolio of senior secured fixed income securities listed or traded on Recognised Markets globally.

As at 31 December 2024, Class I EUR, Class I H GBP, Class I H USD, Class IF EUR, Class IF H USD and Class IX EUR were in operation.

Man European High Yield Opportunities

Man European High Yield Opportunities' investment objective is to provide income and capital growth by investing directly or indirectly in fixed and floating rate securities predominantly in pan-europe.

As at 31 December 2024, Class I EUR, Class I H GBP, Class I H USD, Class IF EUR, Class IF H USD, Class IU EUR and IU EUR G-Dist were in operation.

1. General (continued)

Man GLG RI Sustainable Credit Opportunities

Man GLG RI Sustainable Credit Opportunities' investment objective was to provide income and capital growth by investing directly or indirectly in fixed and floating rate securities worldwide, while giving careful consideration to long-term environmental, social and governance criteria.

Man GLG RI Sustainable Credit Opportunities ceased its operations on 13 November 2024.

Man TargetClimate

Man TargetClimate aims to generate capital growth over the medium to long term through investment in a range of assets which the Investment Manager believes will contribute to climate change mitigation.

The Portfolio seeks to achieve its objective by providing risk-controlled exposure to the assets selected which are deemed by the Investment Manager to be aligned with the transition to a low carbon economy and contributing to climate change mitigation ("climate-aligned") using environmental metrics, through allocating all or substantially all of its assets in accordance with a proprietary quantitative model, the 'Man TargetClimate' strategy.

As at 31 December 2024, Class I USD, Class I H EUR, Class I H GBP, Class IF USD and Class IF H EUR were in operation.

Man Emerging Markets Corporate Credit Alternative

Man Emerging Markets Corporate Credit Alternative's investment objective is to provide investors with positive absolute returns, primarily through both long and short investments in emerging market corporate and sovereign bonds.

The Portfolio seeks to achieve its objective by allocating all or substantially all of its assets in accordance with the investment approach adopted such as by investing all or part of the net proceeds of Shares in transferable securities, exchange traded and OTC financial derivative instruments, money market instruments, other collective investment schemes and deposits, cash or cash equivalents.

As at 31 December 2024, Class DNF USD G-Dist, Class DN H EUR, Class DN H SGD, Class DV USD, Class IN USD, Class IN USD G-Dist, Class IN H EUR, Class IN H GBP, Class IN H SEK, Class IN U USD, Class INF USD, Class INF H CHF, Class INF H EUR, Class INF H GBP and Class IV USD were in operation.

Man European Leaders Alternative

Man European Leaders Alternatives investment objective is to provide investors with an absolute return through a long/short strategy investing primarily in Europe.

The Portfolio seeks to apply a long/short investment strategy and intends to take full advantage of the ability to invest in derivatives providing long and "synthetic short" positions.

As at 31 December 2024, Class IN EUR, Class IN H USD, Class INF EUR, Class INF H GBP and Class INF H USD were in operation.

Man Financial Credit Opportunities

Man Financial Credit Opportunities' investment objective is to provide income and capital growth by investing directly or indirectly in fixed and floating rate securities worldwide issued primarily by financial institutions.

The Portfolio seeks to achieve its objective by allocating all or substantially all of its assets in accordance with the investment approach adopted such as by investing all or part of the net proceeds of shares in transferable securities, exchange traded and OTC financial derivative instruments, money market instruments, other collective investment schemes and deposits, cash or cash equivalents.

As at 31 December 2024, Class D H SGD, Class I EUR, Class I H USD, Class IF EUR, Class IF H GBP, Class IF H USD and Class IX EUR were in operation.

Man Global Technology Equity Alternative

Man Global Technology Equity Alternatives' investment objective is to provide investors with positive absolute returns through a long / short strategy.

The Portfolio seeks to achieve its objective by investing all of its assets in accordance with the investment approach adopted such as by investing all or part of the net proceeds of shares in transferable securities, exchange traded and OTC financial derivative instruments, money market instruments, other collective investment schemes and deposits, cash or cash equivalents.

As at 31 December 2024, Class DN H EUR, Class INF H EUR, Class INF USD and Class IN USD were in operation.

Man Systematic RI Equity Alternative

Man Systematic RI Equity Alternative investment objective is to provide investors with positive absolute returns through a long / short strategy.

The Portfolio seeks to achieve its objective by using Numeric's proprietary quantitative models to select securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Long-Short investment strategy. The strategy involves taking long and short positions in relation to issuers globally denominated that represent, an opportunity for short-term investment gains.

As at 31 December 2024, Class DN H EUR, Class INF H EUR, Class INF USD and Class IN USD were in operation.

1. General (continued)

Man Dynamic Diversification

Man Dynamic Diversification investment objective is to provide investors with medium-term absolute returns in all market condition across liquid asset classes.

The Portfolio seeks to achieve its objective by allocating all or substantially all of its assets in accordance with the investment approach adopted such as by investing all or part of the net proceeds of shares in transferable securities, exchange traded and OTC financial derivative instruments, other collective investment schemes and through TRS linked to the performance of a reference basket.

As at 31 December 2024, Class I USD was in operation.

2. Material accounting policies

(a) Basis of preparation

The financial statements are prepared in accordance with International Financial Reporting Standards ("IFRS") as adopted by the European Union ("EU"). The financial statements have been prepared on a historical cost basis except for financial assets and liabilities at fair value through profit or loss that have been measured at fair value.

(b) Changes in accounting policy and disclosure

The accounting policies adopted in the preparation of the financial statements are consistent with those followed in the preparation of the Fund's audited financial statements for the year ended 31 December 2023.

There were no recent accounting pronouncements applicable to the Fund in the current year.

At the date of authorisation of the financial statements there were a number of other Standards and Interpretations which were in issue but not yet effective. Management anticipate that the adoption of these Standards and Interpretations in future periods will have no material impact on the financial statements of the Fund.

(c) Use of accounting judgements and estimates

The preparation of financial statements in accordance with IFRS requires management to make judgements, estimates and assumptions that affect the amounts reported and disclosures made in these financial statements and accompanying notes, including certain valuation assumptions. Uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities in the future.

(d) Going concern

Management has made an assessment of the Fund's ability to continue as a going concern and are satisfied that the Fund has resources to continue in business for a period of at least 12 months beyond the date these financial statements are available to be issued. Furthermore, the management is not aware of any material uncertainties that may cast significant doubt upon the Fund's ability to continue as a going concern; therefore, the financial statements are prepared on a going concern basis.

(e) Interest income and expense

Interest income and expense is recognised in the statement of comprehensive income as it accrues, on an effective interest rate basis.

(f) Dividend income and dividend expense on short securities

Dividend income from financial assets at fair value through profit or loss is recognised in the statement of comprehensive income within dividends when the Fund's right to receive payments is established. Dividend income is recognised gross of withholding tax, if any. Dividend expense is recognised on the ex-dividend date.

(g) Financial assets and liabilities at fair value through profit or loss

For Net Asset Value ("NAV") purposes, the valuation of financial assets and liabilities is calculated in accordance with the Prospectus. For financial statements purposes, financial assets and liabilities have been valued in accordance with IFRS using the policies outlined below.

At 31 December 2024 and 31 December 2023, there are no material differences between these valuation methods.

In accordance with *IFRS 9 Financial Instruments: Classification and Measurement*, the Fund classifies its financial assets and liabilities at initial recognition into the categories of financial assets and financial liabilities as discussed below.

Under IFRS 9, a financial asset is classified as measured at: amortised cost, fair value through other comprehensive income ("FVOCI") or fair value through profit or loss ("FVTPL"). The classification of financial assets under IFRS 9 is based on the business model in which a financial asset is managed and on its contractual cash flow characteristics.

In evaluating the classification of its financial assets, the Fund has considered the following:

- o Whether it is held within a business model whose objective is to hold assets only to collect contractual cash flows ("business model test"); and
- o Whether its contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest ("SPPI test").

Both the business model test and SPPI test must be met in order to account for a financial asset at amortised cost or FVOCI. If both tests are not met the financial asset must be measured at FVTPL.

2. Material accounting policies (continued)

(g) Financial assets and liabilities at fair value through profit or loss (continued)

The Fund classifies its investments based on both the Fund's business model for managing those financial assets and the contractual cash flow characteristics of the financial assets. The portfolio of financial assets is managed and performance is evaluated on a fair value basis. The Fund is primarily focused on fair value information and uses that information to assess the assets' performance and to make decisions. The Fund has not taken the option to irrevocably designate any financial instruments as fair value through other comprehensive income.

The contractual cash flows of the Fund's debt securities are solely principal and interest, however, these securities are neither held for the purpose of collecting contractual cash flows nor held both for collecting contractual cash flows and for sale. The collection of contractual cash flows is only incidental to achieving the Fund's business model's objective.

The Fund recognises a financial asset or a financial liability when, and only when, it becomes a party to the contractual provisions of the instrument. Purchases and sales of investments are recognised on the trade date, which is the date on which the Fund commits to purchase or sell the asset. Financial assets and liabilities at fair value through profit or loss are initially recognised at fair value. All transaction costs for such instruments are recognised directly in the statement of comprehensive income.

Consequently, all investments are measured at fair value through profit or loss.

The fair value of financial instruments traded in active markets (such as publicly traded derivatives, government bonds and exchange traded securities) is based on quoted market prices at the statement of financial position date.

In circumstances where the last traded price is not within the bid-ask spread, management will determine the point within the bid-ask spread that is most representative of fair value.

The Directors have appointed an Independent Pricing Committee ("IPC") to undertake certain services concerning the valuation policies and procedures relating to the Fund. The IPC is an independent body set up to: (1) establish a pricing matrix (a table which lays out a pricing source for certain assets and liabilities) which the Directors have adopted for the Fund and which is used by the Administrator to calculate the value of the assets and liabilities held by the Fund; and (2) to establish the prices of any positions held in the Fund that do not have an independently ascertainable value as per the pricing matrix. In addition, the IPC provides general governance and oversight of the valuation process.

The Fund may from time to time invest in financial instruments or securities that are not traded in an active market (for example over-the-counter ("OTC") derivatives and private placements of both equities and fixed income securities). These financial instruments are valued at their fair value in the manner described in subsequent accounting policies.

Any exchange traded derivative instruments (including, but not limited to, options and futures) dealt in on a market are valued at the settlement price on the relevant Valuation Day for such instruments on such a market. If the settlement price is not available, their probable realisation value shall be determined with care and in good faith by the Fund.

The investments in managed funds ("managed funds") are initially measured at fair value and then carried at their NAV per unit at the statement of financial position date. This measure approximately represents the fair value of such investments. If their stated NAV per unit is not available, managed funds are valued at the latest available stated NAV per unit.

Investments are derecognised when the rights to receive cash flows have expired or the Fund has transferred substantially all of the risks and rewards of ownership.

(h) Securities sold short

The Fund may sell securities short. A short sale is a transaction in which the Fund sells a security it does not own. The proceeds received for short sales are recorded as liabilities and the Fund records an unrealised gain or loss to the extent of the difference between the proceeds received and the value of the open short position. The Fund records a realised gain or loss when the short position is closed. By entering into short sales, the Fund bears the market risk of an unfavourable change in the price of the security sold short in excess of the proceeds received. Short sales expose the Fund to potentially unlimited liability.

(i) Offsetting financial instruments

Financial assets and liabilities are offset and the net amount reported in the statement of financial position when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis or realise the assets and settle the liabilities simultaneously. As at 31 December 2024 and 31 December 2023, no financial assets and liabilities are offset in the statement of financial position. Please refer to Note 5.

2. Material accounting policies (continued)

(j) Derivatives

The Fund may trade in derivative financial instruments whose values are based upon an underlying asset, index, currency or interest rate. The net unrealised gains or losses, rather than contracts or notional amounts, represents the approximate future cash flows from trading.

The Fund is engaged in forward currency contracts, futures contracts, option contracts, swap contracts, credit default swaps, equity swaps, interest rate swaps, total return swaps, rights and warrants.

- Equity swaps

Equity swaps are recorded on the trade date basis and are valued based on the difference between the notional long/short position of the underlying equity security calculated from a reference price on the date of entering into the swap and the market value at the date of closing the trade, or the reporting date if prior to terminating the swap. The difference between the initial recognition amount and the market value of the open equity swaps is reflected as financial assets and liabilities at fair value through profit or loss in the statement of financial position and as net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. Realised gains or losses are recognised on the closing or trade date of the swap and are included in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

- Forward currency contracts

Forward currency contracts are recorded on the trade date and are valued at the applicable foreign exchange rates on the last business day of the year. The difference between the fair value of the original contract amount and the fair value of the open forward currency contract position is reflected as financial assets or liabilities in the statement of financial position and as net gain/(loss) on the financial assets at fair value through profit or loss in the statement of comprehensive income. Realised gains or losses are recognised on the maturity or trade date of the contract and are included in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

- Futures contracts

Futures contracts are recorded on the trade date and are valued at the last traded price on the last business day of the year. The difference between the original contract amount and the fair value of the open futures position is reflected as financial assets or financial liabilities at fair value through profit or loss in the statement of financial position and as net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. Realised gains or losses are recognised on the closing or trade date of the contract and are included in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

- Option contracts

The Fund may invest in option contracts. An option contract gives the owner the right, but not the obligation, to buy ("call option") or to sell ("put option") a specified item at a fixed price during a specified year for a non-refundable fee ("premium"). The maximum loss to a buyer of an option is the loss of the premium. The writer of a call option has to bear the risk of an unfavourable change in the value underlying the option and, unless an offsetting long position is owned, the theoretical loss is unlimited. The loss to the writer of a put option is limited to the exercise price of the option, versus the premium collected on its sale. Option contracts are held at fair value with reference to quoted market prices, when available, or based on pricing models that consider the time value of money, volatility and the current market and contractual prices of the underlying financial instruments.

- Swap contracts

Swap contracts are contractual agreements between two parties to exchange streams of payments over time based on specified notional amounts. The swap contracts are valued at an amount equal to the gain or loss that would be realised if the position was closed out on the valuation date. The Fund's main swap contracts consist of credit default swaps, interest rate swaps and total return swaps.

Swap contracts are marked-to-market daily and changes in value are recorded as unrealised gain/(loss). When a swap contract is terminated, the Fund will record a realised gain/(loss) equal to the difference between the proceeds from (or cost of) the closing transaction and the Fund's basis in the contract, if any. Swap transactions involve, to varying degrees, elements of credit and market risk in excess of the amounts recognised in the statement of financial position. Such risks involve the possibility that there will be no liquid market for these agreements, that the counterparty to the agreements may default on its obligation to perform or disagree as to the meaning of the contractual terms in the agreements, and that there may be unfavourable changes in interest rates and/or market values associated with these transactions.

- Credit default swaps

The Fund may enter into credit default swaps to manage its exposure to certain sectors of the market or to reduce credit risk. The Fund may enter into credit default swap agreements to provide a measure of protection against the default of an issuer (as buyer of protection) and/or gain credit exposure to an issuer to which it is not otherwise exposed (as seller of protection). Credit default swaps are agreements in which one party pays fixed periodic payments to counterparty in consideration for a guarantee from the counterparty to make a specific payment should a negative credit event take place (e.g. default, bankruptcy or debt restructuring). The Fund may either buy or sell (write) credit default swaps. As a buyer, the Fund will either receive from the seller an amount equal to the notional amount of the swap and deliver the referenced security or underlying securities comprising of an index or receive a net settlement of cash equal to the notional amount of the swap less the recovery value of the security or underlying securities comprising of an index. As a seller (writer), the Fund will either pay the buyer an amount equal to the notional amount of the swap and take delivery of the referenced security or underlying securities comprising of an index or pay a net settlement of cash equal to the notional amount of the swap less the recovery value of the security or underlying securities comprising of an index. In the event of default by the counterparty, the Fund may recover amounts paid under the agreement either partially or in total by offsetting any payables and/or receivables with collateral held or pledged.

These periodic payments received or made by the Fund are included in net realised gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

2. Material accounting policies (continued)

(j) Derivatives (continued)

- Interest rate swaps

Interest rate swaps relate to contracts taken out by the Fund with major brokers in which the Fund either receives or pays a floating rate of interest in return for paying or receiving, respectively, a fixed rate of interest. The payment flows are usually netted against each other, with the difference being paid by one party to the other. Changes in the value of the interest rate swap agreements and amounts received or paid in connection with them are recognised as net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

- Total return swaps

Total return swaps are contracts in which the Fund pays or receives a series of cash flows based upon the total return of a specified asset in return for paying or receiving, respectively, a fixed or floating rate of interest based upon that same specified asset.

- Warrants and Rights

The Fund invests in warrants and rights through listed exchanges and OTC markets. The listed warrants and rights are traded on recognised exchanges and valued at the last traded price. OTC traded warrants and rights are valued by reference to quoted prices. Change in realised and unrealised gains and losses are recorded in the statement of comprehensive income.

(k) Realised and unrealised gains and losses

All realised and unrealised gains and losses on securities and derivatives are recognised as net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. The cost of securities is accounted for on a specific identification basis. Unrealised gains and losses comprise changes in the fair value of financial instruments for the year and from the reversal of the prior year's unrealised gains and losses for financial instruments which were realised in the reporting year. Realised gains and losses represent the difference between an instrument's initial carrying amount and disposal amount, or cash payments or receipts made in respect of derivative contracts (excluding payments or receipts on collateral margin accounts for such instruments).

(l) Transaction costs

Transaction costs are incremental costs, which are separately identifiable and directly attributable to the acquisition, issue or disposal of a financial asset or financial liability. Transaction costs incurred by the Fund during the year are recognised in the statement of comprehensive income as part of net gain/(loss) on financial assets and liabilities at fair value through profit or loss.

(m) Functional and presentation currency

Items included in the Fund's financial statements are measured using the currency of the primary economic environment in which it operates (the "functional currency"). This is United States Dollars ("US\$") for all sub-funds except Man GLG European Equity Alternative, Man European Mid-Cap Equity Alternative, Man High Yield Opportunities, Man High Yield Opportunities DE, Man GLG Senior Secured Opportunities, Man European High Yield Opportunities, Man GLG RI Sustainable Credit Opportunities, Man European Leaders Alternative and Man Financial Credit Opportunities is Euro ("€") and Man Alpha Select Alternative for which the functional currency is Pound Sterling ("£"). The Fund has adopted the functional currency of each sub-fund as the presentation currency for these financial statements. There has been no change in each sub-fund's functional currency since its inception. The Fund's functional and presentational currency is United States Dollars.

(n) Foreign currency

Transactions during the year denominated in foreign currencies have been translated at the rates of exchange ruling at the dates of transactions. Assets and liabilities denominated in foreign currencies are translated at the rates of exchange in effect at the date of the statement of financial position. For investment transactions and investments held as at year end denominated in foreign currency, resulting gains or losses are included in the net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. All other foreign currency gains and losses are also included in the net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

The combined fund balances are expressed in US\$, being the presentational currency of the Fund as a whole. For combined fund balances in the statement of financial position, the non-US\$ Portfolios are translated using the exchange rate at the date of the statement of financial position. For combined fund balances in the statement of comprehensive income, the non-US\$ Portfolios are translated at the average exchange rate prevailing during the year. The combined subscriptions and redemptions in the statement of changes in net assets are also translated at the average rate prevailing during the current year. The translation gain/(loss) resulting from the preparation of the combined fund balances in the financial statements amounts to a loss of US\$226,056,729 (31 December 2023: gain of US\$188,793,642) which has been shown as other comprehensive income in the combined fund column in the statement of comprehensive income. The gain/loss does not have any effect on the individual Portfolios.

2. Material accounting policies (continued)

(o) Repurchase agreements and reverse repurchase agreements

The Fund may enter into securities sold under agreements to repurchase ("repurchase agreements"), under the terms of the repurchase agreement, with selected counterparties under which the Fund acquires securities as collateral subject to an obligation of the counterparty to repurchase and the Fund to resell the securities at an agreed upon time and price. The Fund and counterparties are permitted to sell, re-pledge, or use the collateral associated with the transaction. Upon an event of default under the terms of the repurchase agreement, both parties have the right to set-off. Repurchase agreements are reflected in the statement of financial position and included in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. Realised gains/losses are included in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. The difference between the sale and repurchase prices is treated as interest expense and is accrued over the life of the agreement and is included in the statement of comprehensive income.

Securities purchased under agreements to re-sell ("reverse repurchase agreements") are treated as collateralised financing transactions and are carried at the amounts at which the securities were acquired plus accrued interest, which approximates fair value. It is the Fund's policy to take possession of reverse repurchase agreements. Reverse repurchase agreements are reflected in the statement of financial position and included in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. Realised gains/losses are included in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income. Interest earned on securities owned and reverse repurchase agreements are included in the statement of comprehensive income.

(p) Other expenses

Other expenses are recognised in the statement of comprehensive income on an accruals basis.

(q) Investor Money Regulations

In response to the Central Bank publishing the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) Investor Money Regulations 2015 for Fund Service Providers (the "Investor Money Regulations" or "IMR") in March 2015 (effective from 1 July 2016), Man Asset Management (Ireland) Limited (the "Manager") undertook, together with BNY Mellon Fund Services (Ireland) Designated Activity Company, a review of the way in which subscription, distribution and redemption monies are routed to and from the Fund or the relevant sub-fund. As a result of this review, subscription and redemption monies are routed through a sub-fund cash collection account in the name of the sub-fund. Pending issue of the units and / or payment of subscription proceeds to an account in the name of the sub-funds, and pending payment of redemption proceeds or distributions, the relevant investor will be an unsecured creditor of the sub-fund in respect of amounts paid by or due to it.

(r) Redeemable Participating Shares

Redeemable shares are classified as equity instruments when:

- The redeemable shares entitle the holder to a pro rata share of the Fund's net assets in the event of the Fund's liquidation;
- The redeemable shares are in the class of instruments that is subordinate to all other classes of instruments;
- All redeemable shares in the class of instruments that is subordinate to all other classes of instruments have identical features;
- The redeemable shares do not include any contractual obligation to deliver cash or another financial asset other than the holder's rights to a pro rata share of the Fund's net assets; and
- The total expected cash flows attributable to the redeemable shares over the life of the instrument are based substantially on the profit or loss, the change in the recognised net assets or the change in the fair value of the recognised and unrecognised net assets of the Fund over the life of the instrument.

In addition to the redeemable shares having all of the above features, the Fund must have no other financial instrument or contract that has:

- Total cash flows based substantially on the profit or loss, the change in the recognised net assets or the change in the fair value of the recognised and unrecognised net assets of the Fund; and
- The effect of substantially restricting or fixing the residual return to the redeemable shareholders.

The Fund continuously assesses the classification of the Redeemable Participating Shares. If the Redeemable Participating Shares cease to have all the features, or meet all the conditions set out, to be classified as equity, the Fund will reclassify them as financial liabilities and measure them at fair value at the date of reclassification, with any differences from the previous carrying amount recognised in equity. If the Redeemable Participating Shares subsequently have all the features and meet the conditions to be classified as equity, the Fund will reclassify them as equity instruments and measure them at the carrying amount of the liabilities at the date of the reclassification.

As at 31 December 2024 and 31 December 2023, the Fund classified its Redeemable Participating Shares as a liability.

Shareholder transactions include subscriptions received in advance and redemptions in the process of being paid.

2. Material accounting policies (continued)

(s) Cash and cash equivalents

Cash and cash equivalents in the statement of financial position may consist of cash at bank, demand deposits, short-term deposits in financial institutions and short-term highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value, with original maturities of three months or less. Short-term investments that are not held for the purpose of meeting short-term cash commitments and restricted margin accounts are not considered cash and cash equivalents. For the purpose of the statement of cash flows, cash and cash equivalents consist of cash and cash equivalents as defined above, net of outstanding bank overdrafts when applicable.

(t) Bank overdraft

Bank overdraft in the statement of financial position consists of negative cash balances on the bank accounts at the year end. Interest is charged on these bank overdraft balances.

(u) Collateral balances with brokers and collateral balances due to brokers

Collateral balances with brokers and collateral balances due to brokers include amounts transferred as collateral against open derivative contracts. Amounts receivable from short sales and collateral may be restricted in whole or in part until the related securities are purchased. To the extent that units are purchased on margin, the margin debt may be secured on the related units.

(v) Due from and due to brokers

Due from brokers include receivables for securities sold (in a regular way transaction) that have been contracted for but not yet delivered on the statement of financial position date. These are carried at amortised cost using the effective interest method less any allowance for impairment. Due to brokers are payables for securities purchased (in a regular way transaction) that have been contracted for but not yet delivered on the statement of financial position date. These are measured at amortised cost using the effective interest method.

(w) Distributions to shareholders

In accordance with the Fund's Prospectus, the Fund may fully distribute its distributable income to shareholders.

Distributable income includes capital gains arising from the disposal of investments.

Unrealised gains and losses are included in the net assets attributable to shareholders and are not distributable until realised. Capital losses are not distributed to shareholders, but are retained to be offset against any future realised capital gains. Distributions to shareholders are recognised in statement of comprehensive income as finance costs.

(x) Preliminary expenses

The Fund has borne its formation expenses, including, without limitation, legal, accounting, filing and administration expenses associated with the organisation of the Fund and the offering of shares in the year in which they were incurred. For NAV purposes the formation expenses are amortised over the 36 months of trading of the Fund.

(y) Withholding Tax

The Fund currently incurs withholding taxes imposed by certain countries on investment income. Such income is recorded gross of withholding taxes in the statement of comprehensive income. Withholding taxes are shown as a separate line item in the statement of comprehensive income. This line also includes reclaims of withholding tax received during the financial year. IFRIC Interpretation 23 *Uncertainty over income tax treatment* addresses the accounting for income taxes when tax treatments involve uncertainty that affects the application of IAS 12 and does not apply to taxes or levies outside the scope of IAS 12, nor does it specifically include requirements relating to interest and penalties associated with uncertain tax treatments. The Interpretation specifically addresses the following:

- Whether an entity considers uncertain tax treatments separately;
- The assumptions an entity makes about the examination of tax treatments by taxation authorities;
- How an entity determines taxable profit/(tax loss), tax bases, unused tax losses, unused tax credits and tax rates; and
- How an entity considers changes in facts and circumstances.

An entity has to determine whether to consider each uncertain tax treatment separately or together with one or more other uncertain tax treatments. The approach that better predicts the resolution of the uncertainty should be followed. The interpretation does not have a material impact on the Fund's reported results.

3. Cash and cash equivalents, bank overdraft, collateral balances with brokers and collateral balances due to brokers

At the year/period end, amounts disclosed as cash and cash equivalents, bank overdraft, collateral balances with brokers and collateral balances due to brokers were held at the Bank of America Merrill Lynch, Bank of New York Mellon (London Branch), Barclays Plc, BNP Paribas, Citibank N.A., Deutsche Bank AG, London, Goldman Sachs International, HSBC Bank Plc, JP Morgan Securities Plc, Morgan Stanley & Co. International Plc, Royal Bank of Scotland and Societe Generale. Collateral balances with brokers represent the margin account balances held with the broker and collateral balances due to broker represents an amount payable to broker as a result of margin or collateral amount payable at the year/period end. These include amounts transferred as collateral (which is subject to a security) against open derivatives, short positions or financial instruments purchased on margin, deposits held at call with banks and other short-term highly liquid investments with original maturities of three months or less.

3. Cash and cash equivalents, bank overdraft, collateral balances with brokers and collateral balances due to brokers (continued)

Included in cash and cash equivalents balances at 31 December 2024 are French Discount T-bills with, a fair value of €Nil (cost: €Nil) (31 December 2023: €2,997,975 (cost: €2,973,385)) for Man GLG European Equity Alternative, a fair value of €Nil (cost: €Nil) (31 December 2023: €1,595,300 (cost: €1,587,054)) for Man European Mid-Cap Equity Alternative, a fair value €5,995,788 (cost: €5,969,936) (31 December 2023: €Nil (cost: €Nil)) for Man European High Yield Opportunities and a fair value €1,437,938 (cost: €1,491,430) (31 December 2023: €Nil (cost: €Nil)) for Man European Leaders Alternative.

The portion of collateral balance with/due to brokers represented by collateral as at 31 December 2024 and 31 December 2023 is outlined below:

	31 December 2024	31 December 2023
Man Alpha Select Alternative	£31,990,109	(£125,112,396)
Man GLG European Equity Alternative	-	€6,572,791
Man TargetRisk Global Equities	(US\$3,058,204)	US\$216,358
Man TargetRisk	US\$146,242,889	US\$163,513,128
Man European Mid-Cap Equity Alternative	(€11,628)	€210,171
Man Global Emerging Markets Debt Total Return	(US\$317,768)	US\$8,607,375
Man Innovation Equity Alternative	US\$1,135,097	(US\$253,564)
Man Alternative Style Risk Premia	US\$36,189,874	US\$28,261,049
Man Active Balanced	US\$16,862,187	(US\$3,288,372)

4. Financial assets and liabilities at fair value through profit or loss

Fair value of financial instruments

The Fund classifies fair value measurements using a fair value hierarchy that reflects the significance of the inputs used in determining the measurements in line with IFRS 13: Fair Value Measurement "IFRS 13".

The fair value hierarchy has the following levels:

- Level 1 – Quoted market price in an active market for an identical instrument.
- Level 2 – Valuation techniques based on observable inputs. This category includes instruments valued using: quoted market prices in active markets for similar instruments; quoted prices for similar instruments in markets that are considered less than active; or other valuation techniques where all significant inputs are directly or indirectly observable from market data.
- Level 3 – Valuation techniques using significant unobservable inputs. This category includes all instruments where the valuation technique includes inputs not based on observable data and the unobservable inputs could have a significant impact on the instrument's valuation. This category includes instruments that are valued based on quoted prices for similar instruments where significant unobservable adjustments or assumptions are required to reflect differences between the instruments.

Valuation techniques

Listed or publicly traded investment in equity, managed funds, real estate investment trusts, debt securities and derivatives

When fair values of listed securities and debt securities at the reporting date, as well as publicly traded derivatives, are based on quoted market prices or binding dealer price quotations, without any deduction for transaction costs, the instruments are included within Level 1 of the hierarchy.

4. Financial assets and liabilities at fair value through profit or loss (continued)

Fair value of financial instruments (continued)

Valuation techniques (continued)

Unlisted debt securities and treasury bills

The Fund invests in debt securities, corporate and government bonds and treasury securities. In the absence of a quoted price in an active market, they are valued using observable inputs such as recently executed transaction prices in securities of the issuer or comparable issuers and yield curves. Adjustments are made to the valuations when necessary to recognise differences in the instruments terms. To the extent that the significant inputs are observable, the Fund categorises these investments as Level 2.

Unlisted asset-backed securities

The fair values of investments in asset-backed securities, for which there is currently no active market, are calculated using a valuation model which is accepted in the industry. The most frequently applied valuation techniques include forward pricing and swap models, using present value calculations. The models incorporate various inputs including both credit and debit valuation adjustments for counterparty and own credit risk, foreign exchange spot and forward rates and interest rate curves. For these financial instruments, significant inputs used are market observable and are included within Level 2.

Over-the-counter derivatives

The Fund uses widely recognised valuation models for determining fair values of over-the-counter interest rate swaps, currency swaps and forward foreign exchange contracts. The most frequently applied valuation techniques include forward pricing and swap models, using present value calculations. The models incorporate various inputs including both credit and debit valuation adjustments for counterparty and own credit risk, foreign exchange spot and forward rates and interest rate curves. For these financial instruments, significant inputs used are market observable and are included within Level 2.

Unlisted equity investments

The Fund invests in private equity companies which are not quoted in an active market. Transactions in such investments do not occur on a regular basis. The Fund uses a market based valuation technique for these positions. The Investment Manager determines comparable public companies (peers) based on industry, size, leverage and strategy, and calculates an appropriate earnings multiple for each comparable company identified. The multiple is calculated by dividing the enterprise value of the comparable company by an earnings measure. The trading multiple is then discounted for considerations such as illiquidity and size differences between the comparable companies based on company-specific facts and circumstances. The discounted multiple is applied to the corresponding earnings measure of the investee company to measure the fair value. The Fund classifies the fair value of these investments as Level 3.

Unlisted managed funds

The Fund invests in managed funds which are not quoted in an active market and which may be subject to restrictions on redemptions such as lock up periods, redemption gates and side pockets. The Investment Manager considers the valuation techniques and inputs used in valuing these funds as part of its due diligence prior to investing, to ensure they are reasonable and appropriate and therefore the NAV of these funds may be used as an input into measuring their fair value. In measuring this fair value, the NAV of the funds is adjusted, as necessary, to reflect restrictions on redemptions, future commitments, and other specific factors of the fund and fund manager. In measuring fair value, consideration is also paid to any transactions in the shares of the Fund. Depending on the nature and level of adjustments needed to the NAV and the level of trading in the fund, the Fund classifies these funds as either Level 2 or Level 3.

For all other financial instruments, fair value is determined using valuation techniques. Valuation techniques include net present value techniques, comparison to similar instruments for which market observable prices exist, options pricing models and other relevant valuation models.

4. Financial assets and liabilities at fair value through profit or loss (continued)

Fair value of financial instruments (continued)

The following tables summarise the financial instruments at fair value through profit or loss as at 31 December 2024 and 31 December 2023 and the financial instruments measured at fair value in the statement of financial position grouped into the fair value hierarchy:

Man Dynamic Diversification commenced its operations on 3 December 2024, hence there were no investments as at 31 December 2023.

Short-term balances are excluded from the tables as their carrying value at the year end approximates their fair value.

Investments are reviewed at each financial reporting point to ensure that they are correctly classified between Level 1, 2 and 3 in accordance with the fair value hierarchy outlined above. Where an investment's characteristics change during the year and investments no longer meet the criteria of a given level, they are transferred into a more appropriate level at the end of relevant financial reporting year.

For the year ended 31 December 2024 and 31 December 2023, there were no transfers between Level 1 and Level 2.

A reconciliation of the movements in Level 3 assets/liabilities for the year ended 31 December 2024 and 31 December 2023 is set out below:

All net realised and unrealised gains/(losses) in the tables above are reflected in the accompanying statement of comprehensive income. Net realised and unrealised gain/(loss) of €(8,203) (31 December 2023: (€301)) for Man GLG European Equity Alternative, €4,678,061 (31 December 2023: €20,445,815) for Man High Yield Opportunities, US\$6,812 (31 December 2023: US\$4,372,072) for Man Event Driven Alternative, €779,583 (31 December 2023: (€3,575,884)) for Man High Yield Opportunities DE, (US\$51) (31 December 2023: US\$165) for Man RI Global Sustainable Growth Alternative, €26,659 (31 December 2023: (€202,476)) for Man GLG Senior Secured Opportunities, €12,094 (31 December 2023: €82,726) for Man European High Yield Opportunities, (€3,252) (31 December 2023: €4,506) for Man GLG RI Sustainable Credit Opportunities, €28,476 (31 December 2023: €Nil) for Man Emerging Markets Corporate Credit Alternative and €7,176 (31 December 2023: €Nil) for Man Financial Credit Opportunities relates to Level 3 financial instruments held by the Fund at 31 December 2024 and is reflected in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

The fair value of investments classified within Level 3 is based on unobservable inputs that may be subject to significant variability. Because of the inherent uncertainty of valuations with respect to such investments, the Fund's estimates of fair value may differ significantly from fair values that would have been used had observable inputs been available for the valuation of such investments, and the differences could be material.

4. Financial assets and liabilities at fair value through profit or loss (continued)

Fair value of financial instruments (continued)

The table below discloses the valuation technique used in the valuation of Level 3 investments and quantifies the effect of significant unobservable inputs used to value investments that fall in this category. The ranges of these fair value are not representative of the appropriate inputs to use when calculating the fair value of any one Level 3 asset or liability. Accordingly, the ranges of fair value presented below do not represent certainty in, or possible ranges of fair value measurements of the Fund's Level 3 assets/liabilities.

The fair value impact of the discount range disclosed above is the Investment Manager's assessment of the range of possible illiquidity discounts. The Investment Manager's Independent Pricing Committee has assessed that, based on the information available, there is no reason that the net asset value provided by the underlying managed funds' Investment Managers or their administrators should not represent the most appropriate basis for valuing these assets and therefore no fair value adjustment is applied. The impact of the range of possible unobservable impacts on the fair value of investments is an increase/decrease of up to €21,409/(€21,409) (31 December 2023: increase/decrease of up to €2,071,859/(€2,071,859) for Man High Yield Opportunities.

Forward currency contracts

As part of its portfolio management techniques, the Fund may use forward currency contracts to economically hedge any non-functional currency exposure (although formal hedge accounting is not used). Forward currency contracts may also be used for trading purposes. Forward currency contracts entered into by the Fund represent a firm commitment to buy or sell an underlying asset, or currency at a specified value and point in time based upon an agreed or contracted quantity.

Forward currency contracts may expose the Fund to the risks associated with the absence of an exchange market on which to close out an open position. The Investment Managers closely monitor the Fund's exposure under forward currency contracts as part of the overall management of the Fund's market risk.

Derivative financial instruments

The Fund may trade derivative financial instruments, including equity swaps, futures contracts, forward currency contracts, swaps contracts, option contracts, rights and warrants whose values are based upon an underlying asset, index, currency or interest rate.

4. Financial assets and liabilities at fair value through profit or loss (continued)

Derivative financial instruments (continued)

The Fund is subject to both market and credit risk in trading derivative financial instruments. Market risk is the potential for changes in value due to changes in market interest rates, foreign exchange rates, indices and changes in the value of the underlying financial instruments. Credit risk is the possibility that a loss may occur if a counterparty fails to perform according to the terms of the contract. Substantially all derivative contracts are transacted on a margin basis. Such transactions may expose the Fund to significant off-balance sheet risk in the event margin deposits and collateral investments are not sufficient to cover losses incurred.

The Investment Manager manages the risk associated with these transactions by maintaining margin deposits and collateral investments with its brokers in compliance with individual exchange regulations and internal guidelines. The Investment Manager also takes an active role in managing and controlling the Fund's market and counterparty risks and monitoring trading activities and margin levels daily, and, as necessary, deposits additional collateral or reduces positions.

Credit default swaps are contracts in which the Fund pays or receives an interest flow in return for the counterparty accepting or selling all or part of the risk of default or failure to pay of a reference entity on which the swap is written. Where the Fund has bought protection, the maximum potential loss is the value of the interest flows the Fund is contracted to pay until maturity of the contract. Where the Fund has sold protection, the maximum potential loss is the nominal value of the protection sold.

The Fund may purchase or write put and call options through OTC markets. Options purchased by the Fund provide the Fund with the opportunity to purchase (call options) or sell (put options) the underlying asset at an agreed-upon value either on or before the expiration of the option. Options written by the Fund provide the purchaser of the option the opportunity to purchase from or sell to the Fund the underlying asset at an agreed-upon value either on or before the expiration of the option. Premiums received from writing options are marked-to-market and the resulting gains or losses are recorded in the statement of comprehensive income. The Fund may also invest in swaptions which are a combination of feature an option and an interest rate swap. The maximum loss to a buyer of an option is the loss of the premium. The writer of a call option has to bear the risk of an unfavourable change in the value underlying the option and, unless an offsetting long position is owned, the theoretical loss is unlimited. As at 31 December 2024, the Fund held written put options with a maximum pay out value of US\$377,500 (31 December 2023: US\$ Nil) Man Global Technology Equity Alternative and US\$ Nil (31 December 2023: US\$4,680,000) Man Emerging Markets Corporate Credit Alternative.

Derivative financial instruments are generally based on notional amounts which are not recorded in the financial statements. These notional amounts represent the theoretical principal value on which the cash flows of the derivative transactions are based. Unrealised gains or losses, rather than notional amounts, or the exchange-traded derivatives traded by the Fund are included in the statement of financial position. The net unrealised gains or losses, rather than contract or notional amounts, represent the Fund's approximate future cash flows from trading activities.

As at 31 December 2024 and 31 December 2023, the Fund's exposure through in its investments in derivative financial instruments to underlying positions in notional amounts which are summarised as follows:

6. Financial risk management

Overall risk management

The Fund's investment activities expose it to the various types of risk which are associated with the financial instruments and markets in which it invests. The most important types of financial risks to which the Fund is exposed are market risk, credit risk and liquidity risk. Market risk includes equity price risk, interest rate risk and foreign currency risk. The Fund manages these risks on an aggregate basis along with the risks associated with its investing activities as part of its overall risk management policies.

The nature and extent of the financial instruments outstanding at the dates of the statement of financial position and the risk management policies employed by the Fund are discussed below.

The Manager employs a risk management process in respect of the Fund by which it attempts to accurately measure, monitor and manage the various risks associated with the use of financial instruments by the Fund, including controls on their use and processes for assessing compliance with these controls. The Manager may delegate certain risk management functions to the Investment Manager.

The following summary is not intended to be a comprehensive summary of all of the risks and investors should refer to the Prospectus for a more detailed discussion of the risks inherent in investing in the Fund.

Market risk

Market risk is the risk that fair value or future cash flows of financial instruments will fluctuate due to changes in market variables such as interest rates, foreign exchange rates and security prices.

Market risk can include equity risk, interest rate risk, credit spread risk, volatility and foreign currency risk. The exposure to these factors is measured and monitored using either the Value at Risk ("VaR") or the commitment approach.

All Portfolios with the exception of those noted below, utilise the absolute VaR approach to risk management (where VaR is presented as percentage points of net assets value).

Man TargetRisk Global Equities, Man High Yield Opportunities, Man High Yield Opportunities DE, Man GLG Senior Secured Opportunities, Man European High Yield Opportunities, Man GLG RI Sustainable Credit Opportunities and Man Financial Credit Opportunities utilise relative VaR approach to risk management (absolute VaR/ relative VaR).

The table below identifies the VaR calculated on the Portfolio during 2024. A Monte Carlo VaR model is calculated daily, with a 99% confidence interval, over a 20 day holding period, using a historical observation period of not less than 1 year. This signifies that the Portfolio would not be expected to lose more than the 112 stated amount 99% of the time. The results are based on historically observed correlations and volatilities, which may not be an accurate predictor of the future.

Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

The Fund has direct and indirect exposure to interest rate risk on cash held at the bank, bank overdraft, collateral balances with brokers and collateral balances due to brokers and certain derivative contracts. That exposure may not necessarily be significant due to the generally short term nature of those holdings. But a more significant exposure exists in that the value of all financial instruments held by the Fund may be affected either positively or negatively by changes in interest rates.

The Fund is directly exposed to interest rate risk through its investment in debt securities, which is deliberately designed to generate returns through trading strategies focused on exploiting price differentials in rates. The sensitivity of these exposures is modelled through the overall VAR analysis provided in the market risk section. Short-term government treasury bills are included in the tables on the pages herein after as not being exposed to interest rate risk.

Man Dynamic Diversification commenced its operations on 3 December 2024, hence no table has been presented as at 31 December 2023.

Government bonds which have a coupon rate of 0% have been included under "Not exposed to interest rate risk" in the above tables.

Liabilities not exposed to interest risk comprise due to brokers, certain financial liabilities through profit or loss, shareholder transactions, performance fees payable, management fees payable, interest payable, dividend payable on short securities, liquidation fees payable and accrued expenses and other liabilities. These amounts normally require contractual settlement within one quarter and, in all cases, within one year.

The following tables detail the effect on net assets should interest rates have increased/decreased by 50 basis points (bps) with all other variables remaining constant, assuming that a 50bps increase/decrease in the base interest rate would result in a correlating 50bps increase/decrease in the value of net assets. In reality, an increase/decrease of 50bps would not result in a direct correlating increase/decrease in the fair value of net assets, as the movement in the value of the net assets would depend on the individual asset class and/or market sentiment towards any sensitivity in the interest rate. The volatility measures presented in the Market Risk section capture, among all other variables, these actual interest rate sensitivities.

6. Financial risk management (continued)

Interest rate risk (continued)

The Fund is indirectly exposed to interest rate risk through its investment strategy, which is deliberately designed to generate returns through trading strategies focused on exploiting price differentials in rates. The sensitivity of these exposures is modelled through the overall VaR analysis provided in the market risk section.

Currency risk

Currency risk exists where assets and liabilities are denominated in currencies other than the functional currency, and also on non-functional currency redeemable participating shares. The Fund may use forward currency contracts for the purpose of currency investment, as well as for hedging its foreign currency Share Class exposure.

Monetary assets and liabilities denominated in foreign currencies are summarised below:

Other price risk

Other market price risks arise mainly from uncertainty about future prices of financial instruments held. They represent the potential loss the Fund might suffer through holding market positions in the face of price movements caused by factors specific to the individual investment or factors affecting all instruments traded in the market.

Credit/counterparty risk

The Investment Managers perform due diligence on all counterparties before they become a service provider or counterparty to the Fund, and credit quality checks are part of this process. The credit quality of the Fund's banks, brokers, and Depositary is regularly monitored and factored into allocation decisions.

The Fund is exposed to credit/counterparty risk on parties with whom it trades and bears the risk of settlement default. Credit risk is the risk that a counterparty to a financial instrument will fail to discharge an obligation or commitment that it has entered into with the Fund. For example, it represents the financial risk associated with a security issuer (either Government or Corporate) failing to discharge an obligation or commitment, or filing for bankruptcy. The Fund seeks to reduce concentrations of credit risk by undertaking transactions with several customers and counterparties on recognised and reputable exchanges. The Fund only buys and sells investments through brokers which have been approved by the Investment Managers as an acceptable counterparty.

Financial assets which potentially expose the Fund to counterparty credit risk consist principally of investments in cash balances and deposits with and receivables from brokers and other receivables. The extent of the Fund's exposure to counterparty credit risk in respect of these financial assets approximates their carrying value as recorded in the Fund's statement of financial position. In addition, where the Fund borrows cash to finance leveraged investments, additional collateral is lodged with the counterparty to provide them with security for potential adverse movements in the collateral. Whilst most finance providers afford some segregated protection for this collateral, this facility may not always be available to the Fund, and consequently, can expose the Fund to the credit worthiness of the counterparty.

6. Financial risk management (continued)

Credit/counterparty risk (continued)

Credit risk also arises on transactions with brokers related to transactions awaiting settlement. Risks relating to unsettled transactions are considered small due to the short settlement period involved and the high credit quality of the brokers used. Broker balances are primarily due from large reputable institutions and are, thus, considered at minimal risk for default. As delivery versus payment is the standard procedure for trade settlements, there is no significant credit risk arising from transactions settlements.

Credit risk is the risk that an issuer or counterparty will be unable to meet a commitment that it has entered into with the Fund.

The Fund's maximum exposure to credit risk (not taking into account the value of any collateral or other security held) in the event that the counterparties fail to perform their obligations as at 31 December 2024 in relation to each class of recognised financial assets, including derivatives, is the carrying amount of those assets in the consolidated statement of financial position. Credit risk is mitigated through the diversity of counterparties and regular monitoring of concentration risk.

The exposures are to Bank of America Merrill Lynch, Bank of New York Mellon, Barclays Plc, BNP Paribas, Citibank N.A., Credit Suisse Securities Europe Limited, London, Goldman Sachs International, HSBC Bank Plc, JP Morgan Securities Plc, Morgan Stanley & Co. International Plc, Royal Bank of Scotland and Societe Generale (the "Brokers").

As at 31 December 2024, the majority of the Fund's assets were held with the Brokers. Each of these counterparties is considered by the Fund to be a highly rated and reputable institution and, thus, the individual and aggregate credit risk exposure is considered to not be significant.

The below table shows the credit ratings of the counterparties who hold the securities on behalf of the Portfolios or Funds (whichever word is used to represent sub-funds). For information about credit risk exposure relating to credit securities in the Portfolios, refer to the credit spread table of this document.

In addition, as at 31 December 2024, the Fund had credit risk exposure equivalent on credit instruments over which it has sold protection to third parties through credit default swaps. Please refer to Note 4 for detailed information.

6. Financial risk management (continued)

Credit/counterparty risk (continued)

The below tables show the breakdown by Credit Spread of all credit securities held in the portfolio. This does not include any non-credit hedges held against these (for example equity securities) or deposits held with credit institutions. The "Credit Spread" is the measure which reflects the difference in yield of a credit security relative to an assumed credit risk-free security. For some security classes, the credit spread is the quotation method used by the market. For others, the credit spread is implied from the market price.

3y+	US\$4,652,214	-

6. Financial risk management (continued)

Liquidity risk

Liquidity risk is the risk that the Fund will encounter difficulty in meeting its obligations associated with financial liabilities or equity that are settled by delivering cash or another financial asset. Redeemable Participating Shareholder redemption requests are the main liquidity risk for the Fund.

The Fund's Redeemable Participating Shares are redeemable as outlined in note 10. The Fund is potentially exposed to daily redemptions by its shareholders.

The Fund's financial instruments include Level 1 financial instruments which are considered readily realisable as they are all listed on major recognised exchanges.

The Fund's financial instruments also include investments in Level 2 and 3 financial Instruments, which are not quoted in an active public market and which generally may be illiquid. As a result, the Fund may not be able to liquidate quickly some of its investments in these instruments at an amount close to their fair value in order to meet its liquidity requirements.

The main liability of the Fund is associated with the need to satisfy Redeemable Participating Shareholders' request for redemptions. The Fund seeks to mitigate this risk by investing primarily in securities that are listed or traded on recognised markets, thus assets comprise mainly realisable securities, which can be readily sold.

The Manager implemented ESMA liquidity requirements as at September 2020 and is now monitored by the Manager on an on-going basis.

The following tables below summarise the maturity profile of the Fund's financial liabilities:

Man Global Technology Equity Alternative, Man Systematic RI Equity Alternative and Man Dynamic Diversification commenced their operations on 3 April 2024, 17 June 2024 and 3 December 2024, respectively, hence there were no liabilities as at 31 December 2023.

6. Financial risk management (continued)

Cyber security risk

Cyber security breaches may occur allowing an unauthorised party to gain access to the assets of the Fund, Shareholder data, or proprietary information, or may cause the investment platform, the Investment Manager, the Distributor, the Administrator or the Depositary to suffer data corruption or lose operational functionality. The Fund may be affected by intentional cybersecurity breaches which include unauthorised access to systems, networks, or devices (such as through "hacking" activity); infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. In addition, unintentional incidents can occur, such as the inadvertent release of confidential information (possibly resulting in the violation of applicable privacy laws).

A cybersecurity breach could result in the loss or theft of Shareholder data or funds, the inability to access electronic systems, loss or theft of proprietary information or corporate data, physical damage to a computer or network system, or costs associated with system repairs. Such incidents could cause the Fund, the Investment Manager, the Distributor, the Administrator, the Depositary, or other service providers to incur regulatory penalties, reputational damage, additional compliance costs, or financial loss. Consequently, Shareholders may lose some or all of their invested capital. In addition, such incidents could affect issuers in which a Fund invests, and thereby cause a Fund's investments to lose value, as a result of which investors, including the relevant Fund and its Shareholders, could potentially lose all or a portion of their investment with that issuer.

As at 31 December 2024, there were no such instances reported.

Option writing

As a writer of options, the Fund receives a premium at the outset and then bears the risk of unfavourable changes in the price of the financial instrument underlying the option. As a result of writing option contracts, the Fund is obligated to purchase or sell, at the holder's option, the underlying financial instrument at a fixed price which may differ from the prevailing market price at that date. Writing options may incur losses which greatly exceed the premium income received.

Performance fees accrue at each valuation point and are calculated by the Administrator annually in arrears as at the last business day in the twelve month period ending on 31 December in each year.

The Manager receives no performance fee for the classes mentioned in NA column of above table.

The Manager pays the fees of the Investment Manager, Administrator and the Distributor.

The Manager may also receive distribution fees, up-front sales charges and contingent deferred sales charges.

8. Fees and expenses (continued)

Administration fees

The Fund is subject to an administration fee in respect of each Portfolio in relation to administration services provided by the Administrator and the Investment Manager. The administration fee is an amount which may not exceed 0.30% per annum of the Net Asset Value of the relevant Portfolio. The amount paid to each of the Administrator and Investment Manager is determined between the parties from time to time.

The Investment Manager receives only the portion of the administration fee relating to the administrative support services it provides pursuant to the Administrative Services Agreement. Part of the administration fee is paid by the Fund to the Manager (for on-payment to the Administrator) monthly in arrears and the remainder is paid by the Fund to the Investment Manager. The Fund also reimburses the Manager out of the assets of the Fund for reasonable out-of-pocket expenses incurred by the Administrator and the Investment Manager. The Manager is responsible for reimbursing the Administrator and the Investment Manager for these expenses.

Depositary fees

The Fund pays the Depositary a depositary fee which may not exceed 0.04% per annum of the Net Asset Value of the relevant Portfolio together with value added tax, if any, applicable to such fees. The Fund also reimburses the Depositary out of the assets of the relevant Portfolio for reasonable out-of-pocket expenses will accrue from day to day (which will not exceed normal commercial rates) and reasonable out of pocket expenses of any sub-custodian appointed by the Depositary and will be liable for transaction charges. The fee and expenses of the Depositary are paid monthly in arrears.

Directors' fees

The Fund pays the fees of the Directors. Up to 30 June 2024, each Director's fee was not expected to exceed €15,000 per annum. Effective 1 July 2024, each Director's annual fee increased and is not expected to exceed €35,000 per annum. Effective from this date each director's fee increased on a pro-rata basis. The Directors' fees for the year ended 31 December 2024 were €75,000 (31 December 2023: €45,000). In addition, the Directors receive reimbursement for travel and other out-of-pocket expenses relating to attendance at meetings and other matters, including any expenses relating to the performance of due diligence for the benefit of the Fund.

Distribution fees

There were no distribution fees charged to the Fund for the years ended 31 December 2024 and 31 December 2023.

Details of management, performance, administration and depositary fees incurred by the Fund during the year are shown in the statement of comprehensive income.

Amounts unpaid by the Fund at the year end relating to management, performance, administration and depositary fees are shown below:

	2024 Combined Fund US\$	2023 Combined Fund US\$
Management fees	7,524,027	6,529,018
Performance fees	7,626,462	40,179,134
Administration fees	12,127,718	12,772,825
Depositary fees	1,043,595	1,008,226

Administration fees and depositary fees payable are included in accrued expenses and other liabilities in the statement of financial position.

9. Related party transactions

Neither the Directors, nor their families, nor the secretary (Matsack Trust Limited), nor the Investment Managers had any interests in the Shares of the Fund during the year ended 31 December 2024, with the exception of one Subscriber Shares held by Man Asset Management (Ireland) Limited in a nominee capacity. Man Asset Management (Ireland) Limited is a related party through its holding of the Subscriber Share in the Fund. John Morton, a director of the Fund, holds the second Subscriber Share.

During the year Samantha McConnell, Ronan Daly and Bronwyn Wright earned Directors' fee of €25,000 each (2023: €15,000 each). John Morton has elected to waive his Directors' fee as he is the CEO and a director of Man Asset Management (Ireland) Limited, the Manager of the Fund.

Each of the Directors is or may become involved in other financial investment and professional activities which may cause conflicts of interest with the management of the Fund. These activities include management or administration of other companies (including those with investment objectives similar to those of the Fund or structures that may be related to Man Group plc sponsored investment funds), serving as directors, advisers and/or agents of other companies, including companies and legal structures in which the Fund may invest and/or which may invest into the Fund.

GLG Partners LP, GLG LLC, AHL Partners LLP, Man Solutions Limited and Numeric Investors LLC - the Investment Managers of the Portfolios, Man Asset Management (Ireland) Limited - the Manager of the Fund, Man Investments AG - the Distributor in relation to the Portfolios are indirect wholly-owned subsidiaries of Man Group plc and all subsidiaries of Man Group plc are related parties.

Details of any research fees which are paid to the Research Payment Account operated by the Investment Manager and its affiliates under the rules of the Investment Manager's regulator, the purpose of which is to pay Research Service Providers for services provided from which each Portfolio benefits, are shown in the statement of comprehensive income.

The following transactions took place between the Fund and its related parties:

31 December 2024	Type of fees /(income)	Total fees /(income) US\$	Fees payable /(receivable) US\$
Related party			
Man Asset Management (Ireland) Limited	Management fees	87,148,920	7,524,027
Man Asset Management (Ireland) Limited	Performance fees	11,305,987	7,626,462

Man Asset Management (Ireland) Limited	Expense reimbursement	(15,761,418)	(4,330,165)
Directors	Directors' fees	48,155	-

*The amount paid to each Administrator and Investment Manager is determined between the parties from time to time, but, for the avoidance of doubt, the Investment Manager receives only the portion of the administration fee relating to the administrative support services it provides pursuant to the Administrative Services Agreement. Part of the administration fee will be paid by the Fund to the Manager (for on-payment to the Administrator) monthly in arrears and the remainder will be paid by the Fund to the Investment Manager.

The Manager shall also be entitled to reimbursement of all out-of-pocket expenses incurred for the benefit of the Company including expenses incurred by the Investment Manager, the Administrator and/or by the Distributor and charged to it.

Administration fees and expense reimbursement are included in accrued expenses and other liabilities and other assets, respectively in the statement of financial position.

The above amounts are payable on demand and do not bear interest.

The Directors are satisfied that there are arrangements in place to ensure that transactions carried out with connected parties of the Portfolio are carried out as if negotiated at arm's length and any such transactions are in the best interests of the shareholders of the Portfolio. The Directors are satisfied that any transactions entered into with connected parties during the year complied with the aforementioned obligation.

All transactions with the connected parties were entered into the ordinary course of business and on normal commercial terms.

10. Share capital

The authorised share capital of the Fund is 500,000,000,002 divided into 2 Subscriber Shares of EUR1 each and 500,000,000,000 Shares of no par value initially designated as unclassified Shares. The Directors are empowered to issue up to 500,000,000,000 Shares of no par value designated as Shares of any series or class on such terms as they think fit.

Subscriber Shares of the Fund

The Subscriber Shares are each held by Man Asset Management (Ireland) Limited and John Morton in Nominee capacity. The Subscriber Shares were fully issued when the Fund was launched. They entitle the holders to attend and vote at general meetings of the Fund but do not entitle the holders to participate in the profits or assets of the Fund except for a return of capital on a winding-up. The Subscriber Share capital is beneficially held by or on behalf of the Manager. All issued Shares are fully paid. All these Issued Subscriber Shares are fully paid.

Redeemable Participating Shares

The Fund's Redeemable Participating Shares are redeemable at the shareholder's option on each Dealing Day with applications for any such Shares to be received by the Administrator prior to the relevant Dealing Day deadline as set out in the relevant Supplement. The Fund's Redeemable Participating Shares are classified as financial liabilities. The Fund is therefore potentially exposed to daily redemptions by its shareholders. The exposure to liquidity risk through shareholder redemption requests is managed by specifically setting the redemption notice period to accommodate the expected liquidity of the underlying investment as agreed by the Investment Managers.

The Fund manages its obligation to repurchase the Shares when required to do so and its overall liquidity risk by:

- Allowing for redemptions only during each Business Day.
- Requiring a 1 Business Day notice period before redemptions.

The Fund's policy is to satisfy redemption requests by any one of the following means or as may otherwise be provided in the Fund's Prospectus:

- Withdrawal of cash deposits.
- Disposal of assets

10. Share capital (continued)

Redeemable Participating Shares (continued)

All issued Shares are fully paid. The Fund's capital is represented by these shares with no par value and with each carrying one vote. They are entitled to dividends and to payment of a proportionate share based on the Fund's Net Asset Value per Share on the redemption date.

Investors may be subject to an upfront sales charge of up to 5% of their proposed subscription, payable to the Manager in respect of any subscription for any Class of Shares.

Capital management

As a result of the ability to issue, repurchase and resell Redeemable Participating Shares, the capital of the Fund can vary depending on the demand for the redemptions and subscriptions to the Fund. The Fund is not subject to externally imposed capital requirements and has no restrictions on the issue, redemption of Redeemable Participating Shares other than those set out in the Fund's Prospectus, repurchase and resale of the shares.

The Fund's objectives for managing capital may include:

- investing the capital in investments meeting the description, risk exposure and expected return indicated in the Fund's Prospectus;
- achieving consistent returns while safeguarding capital by investing in diversified portfolios, by participating in derivative and other advanced capital markets and by using various investment strategies and hedging techniques; maintaining sufficient liquidity to meet the expenses of the Fund and to meet redemption requests as they arise; and
- maintaining sufficient size to make the operation of the Fund cost-efficient; and
- maintaining sufficient liquidity to meet the expenses of the Fund and to meet redemption requests as they arise.

Refer to 'Financial risk management' (note 6 under 'Liquidity risk') for the policies and processes applied by the Fund in managing its capital and its obligation to repurchase the Redeemable Participating Shares.

13. Reconciliation of valuation to net asset value

There is a difference between the NAV as per the financial statements and the NAV for subscription and redemption purposes (the "published NAV") for certain Portfolios. The valuation adjustment relates to updated valuations for Womchi and Selecta investments per the Pricing Committee.

A reconciliation of the NAV as per the financial statements and the published NAV is as follows for the relevant Portfolios:

	Published Net Asset Value	Published Net Asset Value per Share	Valuation adjustment	Net Asset Value per financial statements	Outstanding Shares	Net Asset Value per Share per financial statements
<i>Man High Yield Opportunities</i>

14. Segregation of liabilities between portfolios

At an Extraordinary General Meeting held on 22 May 2007, the Fund availed of the provisions of the Investment Funds, Companies and Miscellaneous Provisions Act, 2005 to segregate liabilities between each Portfolio. The Fund will not be liable as a whole to third parties for the liability of each Portfolio.

15. Securities owned and securities sold, not yet purchased

Possession of securities owned is maintained by major multinational broker-dealers. Securities sold, not yet purchased represent obligations of the Fund to purchase the securities at prevailing market prices. The future satisfaction of such obligations may be for an amount greater than the amount recorded.

16. Taxation

The Fund qualifies as an investment undertaking as defined in Section 739 B of the Taxes (Consolidation) Acts 1997. It is not chargeable to Irish tax on its income or capital gains. Tax may arise on the happening of a chargeable event.

A chargeable event includes any distribution payments to Shareholders or any encashment, redemption or transfer of Shares. No tax will arise on the Fund in respect of chargeable events regarding:

- (i) a Shareholder who is not Irish resident and not ordinarily resident in Ireland at the time of the chargeable event, provided the necessary signed statutory declarations are held by the Fund; or
- (ii) certain exempted Irish resident investors who have provided the Fund with the necessary signed statutory declarations; or
- (iii) Shares held in a recognised clearing system as designated by the order of the Irish Revenue Commissioners.

Following legislative changes in the Finance Act 2006, the holding of Shares at the end of a relevant year will, in respect of Irish Resident investors, also constitute a chargeable event. To the extent that any tax issues arise on such a chargeable event, such tax will be allowed as a credit against any tax payable on the subsequent encashment, redemption, cancellation or transfer of the relevant Shares.

Relevant Year is defined as a period of 8 years beginning with the acquisition of a share by a shareholder and each subsequent period of 8 years beginning immediately after the preceding relevant year.

17. Soft commissions

In line with the introduction of revised rules in respect of the use of dealing commission as part of the implementation of the Directive 2014/65/EU on Markets in Financial Instruments and amending Directive 2004/39/EC ("MiFID II"), effective from 3 January 2018 the Investment Manager no longer pays for its investment research via dealing commission. The Investment Manager has established a research budget and the Portfolios have accrued a fee to pay for the research services independent of trade execution. The Investment Manager will share the research costs with the Portfolios based on an allocated usage basis. All transactions are placed and executed on the basis that best execution is achieved.

The Fund incurred transaction costs including equity swaps commissions which are included in the net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

18. Auditor's remuneration

For the year ended 31 December 2024, the Fund incurred audit fees as disclosed in the statement of comprehensive income; these amounts represent a provision. The actual audit fees are US\$214,000 (31 December 2023: US\$221,000).

18. Auditor's remuneration (continued)

During the year there were fees billed for tax advisory services, other assurance services or other non-audit services provided by the auditors of the Fund of US\$591,948 (31 December 2023: US\$683,504).

19. Efficient portfolio management

The Fund may employ investment techniques and instruments for efficient portfolio management of the assets of any Portfolio including hedging against market movements, currency exchange or interest rate risks under the conditions and within the limits stipulated by the Central Bank under the UCITS Regulations and described below.

Techniques and instruments which are used for the purpose of efficient portfolio management, including FDIs which are not used for direct investment purposes, shall be understood as a reference to techniques and instruments which fulfil the following criteria:

- i. they are economically appropriate in that they are realised in a cost effective way;
- ii. they are entered into for one or more of the following specific aims:
 - (a) reduction of risk;
 - (b) reduction of cost;
 - (c) generation of additional capital or income for a Portfolio with an appropriate level of risk taking into account the risk profile of the Portfolio as described in the Prospectus, the risk diversification rules set out in UCITS Notice 9 and the general provisions of the UCITS Regulations
- iii. their risks are adequately captured by the risk management procedures implemented by the Fund, and
- iv. they cannot result in a change to a Portfolio's declared investment objective or add substantial supplementary risks in comparison to the general risk policy as described in its sales documents

While the use of such techniques and instruments will be in line with the best interests of the Fund, individual techniques may result in increased counterparty risk and potential conflicts of interest. Details of the proposed efficient portfolio management techniques and policies adopted by the Fund in relation to their use by the Portfolios and details of the relevant risks are set out in the Prospectus.

20. Transaction costs

For the year ended 31 December 2024 and 31 December 2023 the Fund incurred transaction costs which are included in the statement of comprehensive income as part of net gain/(loss) on financial assets and liabilities at fair value through profit or loss, as follows:

	31 December 2024	31 December 2023

*Man AHL Global Bond, Man GLG RI Sustainable Energy Transition Alternative, Man GLG Core Economy Alternative and Man GLG European Equity Alternative ceased their operations on 31 May 2023, 25 September 2023, 4 December 2023 and 13 May 2024, respectively.

*Man GLG European Equity Alternative, Man GLG Convertible Arbitrage Alternative and Man GLG RI Sustainable Credit Opportunities ceased their operations on 13 May 2024, 29 May 2024 and 13 November 2024, respectively.

21. Securities Financing Transactions Regulation

The Securities Financing Transactions Regulation, as published by the European Securities and Markets Authority, aims to improve the transparency of the security financing markets. Disclosures regarding exposures to Securities Financing Transactions (SFTs) will be required on all reports and accounts published.

As at 31 December 2024, certain Portfolios engaged in securities financing transactions, refer to the reporting requirement in respect of the Securities Financing Transactions Regulation section for details.

22. Significant events during the year

Prospectus

A new Supplement for the GLG Partners LP Portfolios was issued on 8 February 2024 to the Prospectus dated 1 December 2022. The amendments to the Prospectus reflected the removal of ICE BofA European Currency High Yield Constrained Index (Hedged) benchmark from Man High Yield Opportunities and Man High Yield Opportunities DE and noted the addition of new share classes to certain Portfolios.

A new Supplement for the GLG Partners LP Portfolios was issued on 14 March 2024 to the Prospectus dated 1 December 2022. The amendment to the Prospectus reflected the launch of Man Global Technology Equity Alternative and noted the addition of new share classes to certain Portfolios.

A new Supplement for the Numeric Investors LLC Portfolio was issued on 9 May 2024 to the Prospectus dated 1 December 2022. The amendment to the Prospectus reflected the launch of Man Systematic RI Equity Alternative.

Effective 11 July 2024 a revised Supplement for Man Solutions Limited Portfolios was issued. It provided for amendments to permitted investments and strategy flexibility for Man Alternative Style Risk Premia and increase in timing for trading for both Man Alternative Style Risk Premia and Man TargetRisk Global Equities.

A new Supplement for the Man Solutions Limited Portfolios was issued on 3 September 2024 to the Prospectus dated 1 December 2022. The amendment to the Prospectus reflected the launch of Man Dynamic Diversification.

A new Supplement for the Man Solutions Portfolios was issued on 1 November 2024, noting a management fee increase for Man Dynamic Diversification.

An updated Prospectus was issued dated 11 November 2024 along with updated Supplements to the GLG Partners LP Portfolios, GLG LLC Portfolios and Numeric Investors LLC Portfolios also dated 11 November 2024. The updates reflected the Portfolios name changes as disclosed previously in the financial statements along with other general prospectus updates.

Portfolios

Man Global Technology Equity Alternative, Man Systematic RI Equity Alternative and Man Dynamic Diversification commenced their operations on 3 April 2024, 17 June 2024 and 3 December 2024, respectively.

Man GLG European Equity Alternative, Man GLG Convertible Arbitrage Alternative and Man GLG RI Sustainable Credit Opportunities ceased their operations on 13 May 2024, 29 May 2024 and 13 November 2024, respectively.

The Directors, Investment Managers and the Manager acknowledge the current crisis in Ukraine and all applicable Russian related sanctions. The Investment Managers reviewed the positions held across Man Funds VI plc for any Russian and Ukrainian exposure. Appropriate action has been taken to reduce or remove certain direct exposures to Russia, where necessary, and the situation is under ongoing review.

The ongoing political instability in the region is an additional risk factor which is being monitored and could impact the valuation of the Fund's assets after the year end.

There were no other significant events during the year ended 31 December 2024.

23. Subsequent events since the year end

Dividends proposed for the year ended 31 December 2024 were paid on 10 January 2025.

Man Innovation Equity Alternative ceased its operations on 14 April 2025.

Man RI Global Sustainable Growth Alternative ceased its operations on 22 April 2025.

Following the end of the year, the US government introduced a 10% minimum tariff on most imported goods, along with higher reciprocal tariffs on a broad range of countries. This led to significant uncertainty regarding the economic outlook, as market participants scrambled to assess the potential impacts on both growth and inflation. Consequently, equity markets experienced a severe correction, although they partially recovered some of the losses thereafter. The AIFM will continue to monitor the situation closely.

There have been no other significant events since the year end that impact the Fund and require disclosure in the financial statements.

24. Stock lending

The Fund may enter into stock lending programmes organised by generally recognised International Central Securities Depositories Systems provided that the programme is subject to a guarantee from the system operator. As at 31 December 2024, the Fund has a stock lending programme in place with Bank of New York Mellon, (London Branch).

Net income earned by the sub-funds from securities lending activity during the year and fees paid to the securities lending agent were as outlined below:

	Income earned	Fees paid
Man Alpha Select Alternative	£106,111	-
Man GLG European Equity Alternative	€644	-
Man European Mid-Cap Equity Alternative	€411	-

25. Dividends

On 31 December 2024 and 31 December 2023, the Directors proposed the payment of dividends as per the table below:

The Directors do not propose the payment of a dividend for any of the other share classes in the other Portfolios.

26. Contingent liabilities and commitments

There were no contingent liabilities or commitments other than those already disclosed in these financial statements as at 31 December 2024 (31 December 2023: none).

27. Disclosure for cross investments by Portfolios within the Fund

Certain Portfolios invest in other portfolios of the Fund. Their cross investments have been eliminated in the financial statements of the Fund, as follows:

- the market values of underlying collective investment schemes have been eliminated in the combined fund total amounts in the statement of financial position;
- the realised gains and losses, including movements in unrealised gains and losses, and the relevant dividend income and distributions on cross investments have been eliminated in combined fund total amounts disclosed in the statement of comprehensive income;
- the monetary amounts of purchases and sales of units in such collective investment schemes have been eliminated from the net proceeds from sales of shares and cost of shares reacquired, respectively, in the combined fund total amounts disclosed in the statement of changes in net assets attributable to holders of redeemable participating shares.

Man High Yield Opportunities

Man High Yield Opportunities held 36,890 shares in both Man GLG Senior Secured Opportunities and Man Financial Credit Opportunities, at the year end. Transactions involving these shares and the related gains and losses during the year were:

	Combined Fund US\$	Man GLG Senior Secured Opportunities €	Man Financial Credit Opportunities €
Issue of shares	7,983,660	3,689,000	3,689,000
Cost	7,639,919	3,689,000	3,689,000
Fair Value	8,336,298	3,981,538	4,068,967
Adjustment to foreign currency on aggregation	(375,073)	-	-
Net unrealised gain/(loss) on financial assets at fair value through profit or loss	727,711	292,538	379,967

28. Approval of financial statements

The Directors approved these financial statements on 28 April 2025.

INDEPENDENT AUDITOR'S REPORT TO THE DIRECTORS OF MAN FUNDS VI PLC

Report on the audit of the financial statements

Opinion on the financial statements of Man Funds VI plc ("the company")

In our opinion the financial statements:

- give a true and fair view of the assets, liabilities and financial position of the company as at 31 December 2024 and of the result for the financial year then ended; and
- have been properly prepared in accordance with the relevant financial reporting framework, the applicable Regulations and, in particular, with the requirements of the Companies Act 2014.

The financial statements we have audited comprise:

- the Statement of Financial Position;
- the Statement of Changes in Net Assets;
- the Statement of Comprehensive Income;
- the Statement of Cash Flows; and
- the related notes 1 to 27, including material accounting policy information as set out in note 2.

The relevant financial reporting framework that has been applied in their preparation is the Companies Act 2014 and International Financial Reporting Standards as adopted by the European Union ("IFRS") ("the relevant financial reporting framework").

The applicable regulations that have been applied in their preparation is the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations, 2019 ("the applicable Regulations").

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (Ireland) (ISAs (Ireland)) and applicable law. Our responsibilities under those standards are described below in the "*Auditor's responsibilities for the audit of the financial statements*" section of our report.

We are independent of the company in accordance with the ethical requirements that are relevant to our audit of the financial statements in Ireland, including the Ethical Standard issued by the Irish Auditing and Accounting Supervisory Authority, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Conclusions relating to going concern

In auditing the financial statements, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the company's ability to continue as a going concern for a period of at least twelve months from when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report.

/Continued from previous page

INDEPENDENT AUDITOR'S REPORT TO THE DIRECTORS OF MAN FUNDS VI PLC

Other information

The other information comprises the information included in the Reports and Financial Statements, other than the financial statements and our auditor's report thereon. The directors are responsible for the other information contained within the Reports and Financial Statements. Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

Responsibilities of directors

As explained more fully in the Directors' Responsibilities Statement, the directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view and otherwise comply with the Companies Act 2014, and for such internal control as the directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the company or to cease operations, or have no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the financial statements is located on IAASA's website at: <https://iaasa.ie/publications/description-of-the-auditors-responsibilities-for-the-audit-of-the-financial-statements>. This description forms part of our auditor's report.

Report on other legal and regulatory requirements

Opinion on other matters prescribed by the Companies Act 2014

Based solely on the work undertaken in the course of the audit, we report that:

- We have obtained all the information and explanations which we consider necessary for the purposes of our audit.
- In our opinion the accounting records of the company were sufficient to permit the financial statements to be readily and properly audited.
- The financial statements are in agreement with the accounting records.
- In our opinion the information given in the directors' report is consistent with the financial statements and the directors' report has been prepared in accordance with the Companies Act 2014.

Matters on which we are required to report by exception

Based on the knowledge and understanding of the company and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

INDEPENDENT AUDITOR'S REPORT TO THE DIRECTORS OF MAN FUNDS VI PLC

We have nothing to report in respect of the provisions in the Companies Act 2014 which require us to report to you if, in our opinion, the disclosures of directors' remuneration and transactions specified by law are not made.

Use of our report

This report is made solely to the company's shareholders, as a body, in accordance with Section 391 of the Companies Act 2014. Our audit work has been undertaken so that we might state to the company's shareholders those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the company and the company's shareholders as a body, for our audit work, for this report, or for the opinions we have formed.

**The forward currency contracts are held with The Bank of New York Mellon.

^^ Stapled equity positions where the value of the stapled equity is already being priced into the value of the bond, therefore this security is marked to zero to avoid duplication.

(a) Exchange traded derivative instruments.

(b) OTC financial derivatives instruments.

* Transferable securities dealt on another regulated market.

#Transferable securities other than those listed on an official stock exchange or dealt on another regulated market.

All other investments held at the period end are transferable securities listed on an official stock exchange.

Analysis of Total Assets

	% of Total Assets
Transferable securities listed on official stock exchange	62.53
Exchange traded financial derivative instruments described in classification (a) above	0.01
OTC financial derivative instruments described in classification (b) above	0.61
Transferable Securities as described in # above	0.39
Transferable securities dealt on another regulated market described in * above	23.00
Other current assets	13.46
	100.00

Analysis of Total Assets rather than Net Assets is required under UCITS Notice 8.2 appendix B.

Positions valued at zero have been priced in accordance with the valuation policy.

**The forward currency contracts are held with The Bank of New York Mellon.

^ Agreed by the Independent Pricing Committee to mark to zero in July 2020 given no expected recovery from the claim.

(a) Exchange traded derivative instruments.

(b) OTC financial derivatives instruments.

* Transferable securities dealt on another regulated market.

#Transferable securities other than those listed on an official stock exchange or dealt on another regulated market.

All other investments held at the period end are transferable securities listed on an official stock exchange.

Analysis of Total Assets

	% of Total Assets
Transferable securities listed on official stock exchange	53.18
OTC financial derivative instruments described in classification (b) above	12.95
Transferable Securities as described in # above	6.58
Transferable securities dealt on another regulated market described in * above	0.06
Other current assets	27.23
	100.00

Analysis of Total Assets rather than Net Assets is required under UCITS Notice 8.2 appendix B.

Positions valued at zero have been priced in accordance with the valuation policy.

Common Reporting Standard - Data Protection Information Notice

The Fund hereby provides the following data protection information notice to all Shareholders in the Fund either as of 31 December 2015 or at any point of time since this date.

For the avoidance of doubt, this notice applies equally to any Shareholders that have ceased to hold Shares in the Fund since 1 January 2016. Furthermore, it should be noted that this notice is applicable to Controlling Persons of certain Shareholders. The Fund hereby confirm that they intend to take such steps as may be required to satisfy any obligations imposed by (i) the OECD's Standards for Automatic Exchange of Financial Account Information in Tax Matters ("the Standard"), which therein contains Common Reporting Standards ("CRS"), as applied in Ireland by mean of the relevant international legal framework and Irish tax legislation and (ii) EU Council Directive 2014/107/EU, amending Directive 2011/16/EU as regards mandatory automatic exchange information in the field of taxation ("DAC2"), as applied in Ireland by the means of the relevant tax legislation, so as to ensure compliance or deemed compliance (as the case may be) with the Standard/CRS and the DAC2 from 1 January 2016. In this regard, the Investment Manager on behalf of the Fund is obliged under Section 891F and Section 891G of the Irish Taxes Consolidation Act, 1997 (as amended) and regulations made pursuant to those sections to collect certain information about each Shareholder's tax arrangements (and also collect information in relation to relevant Controlling Persons of Specific Shareholders).

In certain circumstances, the Investment Manager on behalf of the Fund may be legally obliged to share this information and other financial information with respect to a Shareholder's interests in the Fund with the Irish Revenue Commissioners (and, in particular situations, also share information in relation to relevant Controlling Persons of specific Shareholders). In turn, and to the extent the account has been identified as a Reportable Account, the Irish Revenue Commissioners will exchange this information with the country of residence of the Reportable Person(s) in respect of the Reportable Account.

In particular, information that may be reported in respect of a Shareholder (and relevant Controlling Persons, if applicable) includes name, address, date of birth, place of birth, account number, account balance or value at year end (or, if the account was closed during such period, the balance or value at the date of the closure of the account), any payments (including redemption and dividend/interest payments) made with respect to the account during the calendar year, tax residency(ies) and tax identification number(s).

Report of Directors' Remuneration (Unaudited)

The directors of the Fund who are also employees of Man Group plc and companies within its group structure ("Man Group") do not receive any remuneration in respect of their services as directors of the Fund. The other directors receive fixed remuneration in respect of their services which is set at a level determined by the Board as a whole and which is not performance related. This is detailed in note 8 of these financial statements. None of the directors are currently in receipt of variable remuneration in respect of their services as directors of the Fund and none of the directors are currently in receipt of a pension from the Fund. The Fund has appointed Man Asset Management (Ireland) Limited as its UCITS management company. As such, the provisions of Article 14b of Directive 2009/65/EC in relation to remuneration are not applicable to the Fund. However, they do apply to Man Asset Management (Ireland) Limited, which has adopted a remuneration policy to ensure compliance.

The Investment Manager may, on behalf of each sub-fund and subject to the conditions and within the limits laid down by the Financial Conduct Authority and the Prospectus, employ techniques and instruments relating to transferable securities, including investments in OTC Financial Derivative Instruments ("FDI") provided that such techniques and instruments are used for efficient portfolio management purposes or to provide protection against exchange risk or for direct investment purposes, where applicable.

The Fund engaged in securities lending activity during the year for the purposes of efficient portfolio management, and invested in equity swaps, total return swaps, repos or reverse repos.

Securities Lending

All securities lending transactions entered into by the sub-funds are subject to a written legal agreement between the sub-funds and the Lending Agent, which is the Bank of New York Mellon, London Branch, and separately between the Lending Agent and the approved borrowing counterparty. Collateral received in exchange for securities lent is delivered to an account in the name of the Depositary on behalf of the sub-funds. Collateral received is segregated from the assets belonging to the sub-funds Depositary or the Lending Agent.

The total income earned from securities lending transactions is split between the relevant sub-funds and the securities lending agent. The sub-funds receives at least 80% while the securities lending agent receives up to 20% of such income with all operational costs borne out of the securities lending agent's share. Income received during the year by each sub-fund from securities lending transactions is disclosed in other income in the statement of comprehensive income included as part of the financial statements.

As at 31 December 2024, no sub-fund is engaged in securities lending.

Net income earned by the sub-funds from securities lending activity during the year and fees paid to the securities lending agent were as outlined below:

	Income earned	Fees paid
Man Alpha Select Alternative	£106,111	-
Man GLG European Equity Alternative	€644	-
Man European Mid-Cap Equity Alternative	€411	-

Income earned by the Fund from the reinvestment of cash collateral in repos, net of any interest payable to the relevant counterparty, outlined below for the year ended 31 December 2024 and is presented within other income in the statement of comprehensive income:

	Income earned
Man GLG European Equity Alternative	€138

All of the non-cash collateral received by the Fund was held by BNY Mellon, London Branch on a tri party settlement basis as at 31 December 2024.

100% of cash collateral is maintained in a segregated account with the custodian. 100% of non-cash collateral is maintained in pooled accounts.

Portfolio Swaps

OTC derivative transactions are entered into by the Fund under an International Swaps and Derivatives Associations, Inc. Master Agreement ("ISDA Master Agreement") or similar agreement. An ISDA Master Agreement is a bilateral agreement between the Fund and a counterparty that governs OTC derivative transactions (including total return swaps and portfolio swaps) entered into by the parties. All OTC derivative transactions entered under an ISDA Master agreement are netted together for collateral purposes therefore any collateral disclosures provided below/elsewhere in the report are in respect of all OTC derivative transactions entered into by the Fund under the ISDA Master agreement, not just portfolio swaps.

The collateral figures provided on the next page relate to collateral held to support specific Securities Financing Transactions Regulation ("SFTs"), other cash held at brokers to support SFTs, and other derivative transactions held at brokers where SFTs are transacted.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 101.92% ¹ of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

¹ Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs");² and
- the reduction of greenhouse gas ("GHG") emissions.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 19 September 2024 the Portfolio had 101.92% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 1.33% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S'

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

(social) SDGs . If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The reduction of GHG emissions	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)
	Paris Agreement portfolio temperature alignment (the time horizon used is 2012 to 2030)

	Sustainability indicator ⁵	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	65.70%

³ Details of how the PAIs have performed are available upon request.

⁴ Please note The sustainability indicator ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ was added in November 2024.

⁵ The first indicator is as at 31 December 2024. For the purposes of this section, please note that the Portfolio employs leverage and may at times be more than 100% invested. The table in this section represents the true % of invested capital and, accordingly, the percentages listed may be more than 100%.

	Sustainability indicator ⁵	Alignment (as an average for reference period ending 31 December 2024)
2.	Climate action (SDG 13)	65.34%
3.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)	73.62 tonnes CO ₂ e / M\$
4.	Paris Agreement portfolio temperature alignment (the time horizon used is 2012 to 2030)	1.82 degrees Celsius

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator as at 31 December 2024 for previous reporting periods in accordance with the process set out above.

	Sustainability indicator ⁶	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)
5.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	65.70%	NA
6.	Climate action (SDG 13)	65.34%	56.16%
7.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)	73.62 tonnes CO ₂ e / M\$	77.29 tonnes CO ₂ e / M\$
8.	Paris Agreement portfolio temperature alignment (the time horizon used is 2012 to 2030)	1.82 degrees Celsius	1.94 degrees Celsius

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

⁶ The first indicator is as at 31 December 2024. For the purposes of this section, please note that the Portfolio employs leverage and may at times be more than 100% invested. The table in this section represents the true % of invested capital and, accordingly, the percentages listed may be more than 100%.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Overall Environmental Alignment to the SDGs
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”), namely:

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Not applicable, the Manager and the Investment Manager do not consider the PAI of investment decisions on sustainability factors in respect of the Portfolio because:

- (a) to do so would be inconsistent with the investment policy of the Portfolio, pursuant to which the Investment Manager invests in investment strategies managed by affiliated managers and
- (b) the Investment Manager cannot influence the underlying strategies of its affiliated managers.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period ending 31 December 2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).⁷

⁷ Please note that the Portfolio employs leverage and may at times be more than 100% invested. The second asset allocation table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed in the second table total more than 100%. **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: <https://www.man.com/products/man-targetrisk-global-equities#documents>

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in the reference period. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.⁸

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Health Care	32.56%
Consumer Staples	24.27%
Information Technology	21.05%
Communication Services	16.91%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act⁹, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting

⁹ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁰?

☒ Yes:

☒ In fossil gas ☒ In nuclear energy

☐ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹¹ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	0.75%
CapEx	0.00%	0.21%
OpEx	0.00%	0.06%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

1.33% of the Portfolio’s investments were in Taxonomy-aligned investments as at 31 December 2024 (calculated as a percentage of net long exposure), compared to 1.51% as at 31 December 2023 and 2.52% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 57.31% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 44.59% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn’t have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio’s objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 41.59% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 31.65% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity

¹¹ Daily notional Value

management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man European Mid-Cap Equity Alternative (the “Portfolio”)
Legal entity identifier: 54930021P7PK8N411140

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 47.60% ¹ of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

¹ Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²
- the reduction of waste production;
- the reduction of greenhouse gas ("GHG") emissions; and
- the circular economy.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- investment in human capital.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 15% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 47.60% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 2.44% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 15% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 15% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

(the “**SDG Framework**”) to measure the extent of an issuer’s alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer’s alignment to the SDGs. An ‘alignment score’ to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs. If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The reduction of waste production	Clean water and sanitation (SDG 6)
	Sustainable cities and communities (SDG 11)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)

³ Details of how the PAIs have performed are available upon request.

⁴ Please note, sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

Promoted characteristic	Sustainability indicator ⁴
Environmental	
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁵
The circular economy	Industry, innovation and infrastructure (SDG 9)
	Responsible consumption and production (SDG 12)
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Investment in human capital	Gender equality (SDG 5)
	Decent work and economic growth (SDG 8)

	Sustainability indicator ⁶	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	40.76%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	9.76%
3.	Gender equality (SDG 5)	54.84%
4.	Clean water and sanitation (SDG 6)	11.48%
5.	Affordable and clean energy (SDG 7)	17.65%
6.	Decent work and economic growth (SDG 8)	25.28%
7.	Industry, innovation and infrastructure (SDG 9)	19.53%
8.	Sustainable cities and communities (SDG 11)	27.13%
9.	Responsible consumption and production (SDG 12)	24.36%

⁵ Details of how the PAIs performed are available upon request.

⁶ The first two indicators are as at 31 December 2024.

	Sustainability indicator⁶	Alignment (as an average for reference period ending 31 December 2024)
10.	Climate Action (SDG 13)	24.84%
11.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)	81.02 tonnes CO2e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods in accordance with the process set out above.

	Sustainability indicator⁷	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
12.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	40.76%	NA	NA
13.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	9.76%	NA	NA
14.	Gender equality (SDG 5)	54.84%	43.79%	25.92%
15.	Clean water and sanitation (SDG 6)	11.48%	4.82%	0.29%
16.	Affordable and clean energy (SDG 7)	17.65%	16.67%	7.38%
17.	Decent work and economic growth (SDG 8)	25.28%	24.33%	14.58%
18.	Industry, innovation and infrastructure (SDG 9)	19.53%	17.90%	8.67%

⁷ The first two indicators are as at 31 December 2024.

	Sustainability indicator ⁷	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
19.	Sustainable cities and communities (SDG 11)	27.13%	14.59%	6.66%
20.	Responsible consumption and production (SDG 12)	24.36%	17.11%	10.71%
21.	Climate Action (SDG 13)	24.84%	18.91%	7.10%
22.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)	81.02 tonnes CO ₂ e / M\$	62.49 tonnes CO ₂ e / M\$	60.15 tonnes CO ₂ e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Overall Environmental Alignment to the SDGs
- Overall Social Alignment to the SDGs
- Gender equality (SDG 5);
- Clean water and sanitation (SDG 6);
- Affordable and clean energy (SDG 7);
- Decent work and economic growth (SDG 8);
- Industry, innovation and infrastructure (SDG 9);
- Sustainable cities and communities (SDG 11);
- Responsible consumption and production (SDG 12); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above

indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 31 December 2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

As a % of Net Long Exposure

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows

the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).⁸⁹

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹⁰

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Industrials	35.93%
Consumer Discretionary	8.53%
Real Estate	6.78%
Materials	4.99%
Communication Services	3.47%
Financials	2.39%
Information Technology	1.64%

Q1 Sub- Sector Breakdown (31 March 2024)	% Capital
Gas Utilities	-0.21%
Oil & Gas Storage & Transportation	-0.19%

Q2 Sector Breakdown (30 June 2024)	% Capital
Industrials	27.09%
Real Estate	13.41%
Consumer Discretionary	10.30%
Materials	5.41%
Communication Services	3.35%

Q3 Sector Breakdown (30 September 2024)	% Capital
Industrials	15.74%
Real Estate	15.46%

⁸ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment

⁹ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹⁰ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

Consumer Discretionary	10.44%
Communication Services	4.55%
Materials	4.40%
Financials	2.84%
Information Technology	2.39%

Q4 Sector Breakdown (31 December 2024)	% Capital
Industrials	22.15%
Real Estate	15.92%
Information Technology	10.19%
Consumer Discretionary	8.65%
Communication Services	6.17%
Financials	3.92%
Materials	3.14%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹¹, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

¹¹ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹²?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹³ made in transitional and enabling activities were as follows:

¹³ Daily notional Value

	Transition Aligned	Enabling Aligned
Turnover	0.00%	1.13%
CapEx	0.02%	1.16%
OpEx	0.00%	1.04%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

2.44% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 (calculated as a percentage of net long exposure), compared to 2.01% as at 31 December 2023 and 0.32% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 39.05% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 55.67% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 6.84% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 9.75% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The "#Other" investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group's proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man Innovation Equity Alternative (the “Portfolio”)
Legal entity identifier: 5493006ULMZ8AEN9I427

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 35.83% ¹ of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

¹ Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²
- the use of renewable energy; and
- the use of raw materials.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs;
- fostering social cohesion; and
- investment in human capital.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 5% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 35.83% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 0.17% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 5% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 5% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs. If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio's minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio's NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.

Promoted characteristic	Sustainability indicator ³
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The use of raw materials	Responsible consumption and production (SDG 12)
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs

³ Please note Reduced inequalities (SDG 10) was removed in November 2024. The sustainability indicators 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs' and 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs' were added in November 2024.

Promoted characteristic	Sustainability indicator ³
Environmental	
Fostering social cohesion	Gender equality (SDG 5)
	Decent work and economic growth (SDG 8)
Investment in human capital	Gender equality (SDG 5)
	Decent work and economic growth (SDG 8)

	Sustainability indicator ⁴	Alignment (as an average % of NAV for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	27.13%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	19.48%
3.	Gender equality (SDG 5)	37.84%
4.	Affordable and clean energy (SDG 7)	8.06%
5.	Decent work and economic growth (SDG 8)	19.09%
6.	Responsible consumption and production (SDG 12)	12.97%
7.	Climate Action (SDG 13)	10.28%

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods in accordance with the process set out above.

⁴ The first two indicators are as at 31 December 2024.

	Sustainability indicator ⁵	Alignment (as an average % of NAV for reference period ending 31 December 2024)	Alignment (as an average % of NAV for reference period ending 31 December 2023)	Alignment (as an average % of NAV for reference period ending 31 December 2022)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	27.13%	NA	NA
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	19.48%	NA	NA
3.	Gender equality (SDG 5)	37.84%	27.02%	13.97%
4.	Affordable and clean energy (SDG 7)	8.06%	7.37%	5.53%
5.	Decent work and economic growth (SDG 8)	19.09%	12.42%	4.75%
6.	Reduced inequalities (SDG 10)	NA	4.99%	0.00%
7.	Responsible consumption and production (SDG 12)	12.97%	15.12%	13.20%
8.	Climate Action (SDG 13)	10.28%	4.27%	5.53%

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

⁵ The first two indicators are as at 31 December 2024.

- Overall Environmental Alignment to the SDGs
- Overall Social Alignment to the SDGs
- Gender equality (SDG 5);
- Affordable and clean energy (SDG 7);
- Decent work and economic growth (SDG 8);
- Responsible consumption and production (SDG 12); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”), namely:

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO ₂) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO ₂ /\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO ₂ /\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary

13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

T

he asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows

the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).⁶⁷

For historical asset allocation please refer to the previous years Fund's annual reports available on www.man.com.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.⁸

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Industrials	16.84%
Consumer Discretionary	13.58%
Financials	9.83%
Materials	6.26%
Consumer Staples	3.38%
Health Care	3.28%
Information Technology	3.01%
Energy	2.01%
Communication Services	1.98%

Q1 Sub- Sector Breakdown (31 March 2024)	% Capital
Oil & Gas Equipment & Services	2.01%

Q2 Sector Breakdown (30 June 2024)	% Capital
Industrials	22.76%
Consumer Discretionary	12.56%
Financials	9.63%
Information Technology	5.18%
Health Care	2.95%

⁶ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

⁷ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

⁸ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

Materials	1.74%
Energy	1.53%
Q2 Sub- Sector Breakdown (30 June 2024)	
Oil & Gas Equipment & Services	1.53%

Q3 Sector Breakdown (30 September 2024)	
Industrials	21.14%
Consumer Discretionary	15.47%
Information Technology	5.53%
Materials	5.17%
Financials	3.57%
Consumer Staples	1.87%

Q4 Sector Breakdown (31 December 2024)	
Industrials	24.63%
Consumer Discretionary	17.99%
Financials	5.65%
Consumer Staples	3.23%
Materials	2.75%
Information Technology	1.67%
Energy	0.75%

Q4 Sub- Sector Breakdown (31 December 2024)	
Integrated Oil & Gas	-1.95%
Oil & Gas Equipment & Services	0.75%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act⁹, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate

⁹ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁰?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Both these graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹¹ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.17%	0.17%

¹¹ Daily notional Value

CapEx	0.00%	0.00%
OpEx	0.04%	0.04%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

0.17% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 (both when calculated as a percentage of invested capital and net long exposure), compared to 0.53% as at 31 December 2023 and 0.23% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 16.25% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 28.68% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure..

Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 19.48% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 34.38% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The "#Other" investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group's proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man High Yield Opportunities DE (the “Portfolio”)¹
Legal entity identifier: 2549005G3O9R028T6Q40

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<p><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No</p> <p><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made sustainable investments with a social objective: ____%</p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes</p> <p><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 29.01%² of sustainable investments</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective</p> <p><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

¹ The Portfolio converted from Article 6 to Article 8 on 28 June 2024.
² Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")³
- the use of renewable energy; and
- the reduction of greenhouse gas ("**GHG**") emissions.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- fostering social cohesion

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 29.01% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 5.15% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("**SDGs**"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG

³ There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs. If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio's minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio's NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period commencing 28 June 2024 (date of portfolio re-categorisation to article 8) ending 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.⁴

Promoted characteristic	Sustainability indicator ⁵
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)

⁴ Details of how the PAIs have performed are available upon request.

⁵ Please note SDG 13 (Climate Action) was removed in November 2024. The sustainability indicators 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs' and 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs' were added in November 2024.

Promoted characteristic	Sustainability indicator ⁵
Environmental	
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁶
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Fostering social cohesion	No poverty (SDG 1)
	Gender equality (SDG 5)

	Sustainability indicator ⁷	Alignment (as an average [% of NAV] for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	23.87%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	11.24%
3.	No poverty (SDG 1)	4.90%
4.	Gender equality (SDG 5)	30.24
5.	Affordable and clean energy (SDG 7)	4.92%
6.	Climate Action (SDG 13)	15.89
7.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁸	145.68 tonnes of CO2e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

⁶ Details of how the PAIs performed are available upon request.

⁷ The first two indicators are as at 31 December 2024.

⁸ Details of how the PAIs have performed are available upon request.

...and compared to previous periods?

Not applicable for the purposes of this periodic report, the Portfolio converted from Article 6 to Article 8 on 28 June 2024 and therefore has not published periodic reports for previous reference periods.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Overall Environmental Alignment to the SDGs
- Overall Social Alignment to the SDGs
- No poverty (SDG 1);
- Gender inequality (SDG 5);
- Affordable and clean energy (SDG 7); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above

indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period ending 31 December 2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as at 31 December 2024 (expressed as a percentage of capital except for taxonomy figures calculated as a percentage of net long exposure).⁹¹⁰

Asset allocation
describes the
share of
investments in
specific assets.

⁹ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

¹⁰ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹¹

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Financials	35.88%
Consumer Discretionary	18.60%
Industrials	10.96%
Communication Services	10.88%
Consumer Staples	8.47%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹², companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

¹² Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹³?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

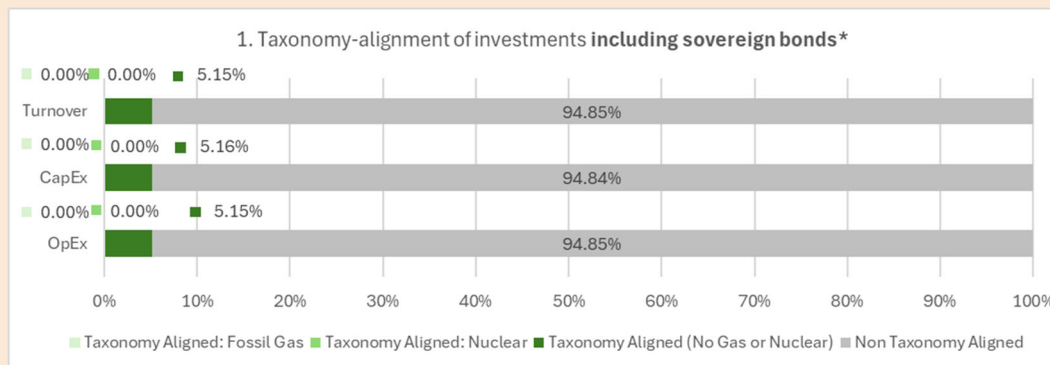

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

The first graph (including sovereign bonds) represents 100% of the netted long exposure. The second graph (excluding sovereign bonds) represents 87.58% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹⁴ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	0.01%
CapEx	0.00%	0.00%
OpEx	0.00%	0.01%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable - the Portfolio has not published periodic reports for previous reference periods.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 13.00% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 10.33% of its total investments in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

¹⁴ Daily notional Value

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group's proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man Asia Pacific (ex-Japan) Equity Alternative (the “Portfolio”)
Legal entity identifier: 254900C4CTQIZ7LBV729

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 55.10% ¹ of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective
<input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

¹ Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the “SDGs”)²
- the use of renewable energy; and
- the reduction of greenhouse gas (“GHG”) emissions.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- investing in economically or socially disadvantaged communities.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio’s NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 55.10% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 8.04% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals (“SDGs”). The sustainability indicators have helped in maintaining the Portfolio’s commitment to invest a minimum of 20% of the Portfolio’s NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio’s NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the “SDG Framework”) to measure the extent of an issuer’s alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs. If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as "contributing to" the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio's minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio's NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁵

³ Details of how the PAIs have performed are available upon request.

⁴ Please note SDG 13 (Climate Action) was removed in November 2024. The sustainability indicators 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs' and 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs' were added in November 2024.

⁵ Details of how the PAIs performed are available upon request.

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Investing in economically or socially disadvantaged communities	No poverty (SDG 1)
	Decent work and economic growth (SDG 8)
	Reduced inequalities (SDG 10)

	Sustainability indicator ⁶	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	32.11%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	32.52%
3.	No poverty (SDG 1)	17.94%
4.	Affordable and clean energy (SDG 7)	29.73%
5.	Decent work and economic growth (SDG 8)	48.02%
6.	Reduced inequalities (SDG 10)	34.48%
7.	Climate Action (SDG 13)	18.69%
8.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁷	86.83 tonnes CO2e/M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods in accordance with the process set out above.

⁶ The first two indicators are as at 31 December 2024.

⁷ Details of how the PAIs have performed are available upon request.

	Sustainability indicator ⁸	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	32.11%	NA	NA
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	32.52%	NA	NA
3.	No poverty (SDG 1)	17.94%	15.20%	16.48%
4.	Affordable and clean energy (SDG 7)	29.73%	20.56%	10.70%
5.	Decent work and economic growth (SDG 8)	48.02%	44.01%	33.18%
6.	Reduced inequalities (SDG 10)	34.48%	25.74%	18.36%
7.	Climate Action (SDG 13)	18.69%	18.98%	10.87%
8.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁹	86.83 tonnes CO ₂ e/M\$	84.67 tonnes CO ₂ e / M\$	99.23 tonnes CO ₂ e / M\$

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Overall Environmental Alignment to the SDGs

⁸ The first two indicators are as at 31 December 2024.

⁹ Details of how the PAIs have performed are available upon request.

- Overall Social Alignment to the SDGs
- No poverty (SDG 1);
- Affordable and clean energy (SDG 7);
- Decent work and economic growth (SDG 8);
- Reduced inequalities (SDG 10); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”), namely:

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD	Binary

		Guidelines for Multinational Enterprises	
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to make the investment;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period ending 31 December 2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows

the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).¹⁰¹¹

For historical asset allocation please refer to the previous years Fund's annual reports available from the Portfolio's webpage: <https://www.man.com/products/man-asia-pacific-ex-japan-equity-alternative#documents>.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹²

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Consumer Discretionary	18.45%
Financials	15.10%
Information Technology	12.73%
Health Care	11.01%
Industrials	9.27%
Real Estate	6.43%
Communication Services	4.44%
Utilities	2.69%
Consumer Staples	1.94%

Q2 Sector Breakdown (30 June 2024)	% Capital
Financials	21.54%
Information Technology	13.99%
Health Care	11.25%
Consumer Discretionary	6.42%
Industrials	6.29%
Real Estate	4.91%
Utilities	3.96%

¹⁰ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

¹¹ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹² For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

Communication Services 2.80%

Q2 Sub- Sector Breakdown (30 June 2024) % Capital

Gas Utilities 0.96%

Q3 Sector Breakdown (30 September 2024) % Capital

Gas Utilities 1.78%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹³, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will

¹³ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁴?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹⁵ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	4.59%
CapEx	0.00%	4.69%
OpEx	0.00%	0.00%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

8.04% of the Portfolio’s investments were in Taxonomy-aligned investments as at 31 December 2024 (calculated as a percentage of net long exposure), compared to 6.90% as at 31 December 2023 and 2.52% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 17.72% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 22.08% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn’t have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio’s objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 30.92% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 38.52% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social

¹⁵ Daily notional Value

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group's proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man GLG Convertible Arbitrage Alternative (the “Portfolio”)¹
Legal entity identifier: 254900S8WDKAZAE0LD78

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 50.17% ² of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective

¹ The fund closed on 29 May 2024. For the purpose of this report calculations were made as at 30 April.

² Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristic promoted by the Portfolio is:

- impact on the environment (focusing predominately on energy use and carbon emissions).

The social characteristic promoted by the Portfolio is:

- tackling inequality.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 10% of the Portfolio's NAV in sustainable investments was met. As at 30 April 2024 the Portfolio had 50.17% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 3.76% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 10% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 10% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs. If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio

invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending when the Portfolio was fully invested³. Other metrics are shown in different units as set out in the table of alignment.⁴

Promoted characteristic	Sustainability indicator
Environmental	
Impact on the environment (focusing predominately on energy use and carbon emissions)	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁵
Social	
Tackling inequality	Gender equality (SDG 5)

	Sustainability indicator	Alignment (as of 30 April 2024)
1.	Gender equality (SDG 5)	64.87%
2.	Climate action (SDG 13)	17.67%
3.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)	127.61 tonnes CO ₂ e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods in accordance with the process set out above⁶.

³ For that purpose calculations were made up to previous month end of the Fund closure (30/04/2024)

⁴ Details of how the PAIs have performed are available upon request.

⁵ Details of how the PAIs performed are available upon request.

⁶ Please note that the Fund converted to Article 8 requirements on 8 December 2023.

	Sustainability indicator	Alignment (as of 30 April 2024)	Alignment (as of 31 December 2023)
1.	Gender equality (SDG 5)	64.87%	65.37%
2.	Climate action (SDG 13)	17.67%	17.48%
3.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)	127.61 tonnes CO2e / M\$	57004 tonnes CO2e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Gender equality (SDG 5); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered "sustainable" is that the investment must do no significant harm ("DNSH") to environmental or social objectives (the "DNSH Test"). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts ("PAI") indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the "RTS"), namely:

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer's industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a "sustainable investment".

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer's industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer's GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD	Binary

		Guidelines for Multinational Enterprises	
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to make the investment;

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of the first quarter and the end of April (the month end before the fund's closure on 29 May 2024). Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 30 April 2024.

Top 15 Holdings (Q1)

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The asset allocation of the Portfolio has been calculated as at 30 April 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows

the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).⁷

For historical asset allocation please refer to the previous year Fund annual report.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of the first quarter and the end of April (the month end before the fund's closure on 29 May 2024). For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.⁸

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Consumer Discretionary	23.30%
Information Technology	15.61%
Industrials	15.11%
Communication Services	9.25%
Health Care	7.55%
Materials	4.01%
Utilities	3.49%
Real Estate	3.14%
Consumer Staples	1.83%
Financials	1.57%
Energy	1.27%
30 April 2024 Sector Breakdown	% Capital
Consumer Discretionary	22.98%
Industrials	18.46%
Information Technology	16.43%
Health Care	8.80%
Communication Services	8.39%
Real Estate	3.71%
Materials	3.70%

⁷ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment. **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

⁸ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

Utilities	3.53%
Consumer Staples	2.02%
Financials	1.64%
Energy	0.98%

30 April Sub- Sector Breakdown	% Capital
Electric Utilities	0.99%
Gas Utilities	1.32%
Integrated Oil & Gas	0.37%
Multi-Utilities	0.80%
Oil & Gas Exploration & Production	0.61%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act⁹, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

⁹ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁰?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 30 April 2024, there were no investments made in transitional and enabling activities for the Portfolio.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

3.76% of the Portfolio's investments were in Taxonomy-aligned investments as at 30 April 2024 (calculated as a percentage of net long exposure), compared to 2.00% as at 31 December 2023. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 11.32% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 12.92% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 35.06% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 38.69% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The "#Other" investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;

- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man RI Global Sustainable Growth Alternative (the “Portfolio”)
Legal entity identifier: 2549004QKI8SMHTIRX73

Environmental and/or social characteristics

<p><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No</p> <p><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made sustainable investments with a social objective: ____%</p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes</p> <p><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 94.03%¹ of sustainable investments</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective</p> <p><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

¹ Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²
- the reduction of greenhouse gas ("GHG") emissions; and
- the circular economy.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs;
- responsible labour relations; and
- investing in human health and capital.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 25% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 94.03% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 7.29% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 25% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 25% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

environmental or social objective. The Investment Manager has implemented a proprietary process (the “**SDG Framework**”) to measure the extent of an issuer’s alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer’s alignment to the SDGs. An ‘alignment score’ to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs. If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The reduction of GHG emissions	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁵
The circular economy	Industry, innovation and infrastructure (SDG 9)

³ Details of how the PAIs have performed are available upon request.

⁴ The sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

⁵ Details of how the PAIs performed are available upon request.

Promoted characteristic	Sustainability indicator ⁴
Environmental	
	Responsible consumption and production (SDG 12)
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Responsible labour relations	No poverty (SDG 1)
	Decent work and economic growth (SDG 8)
Investing in human health and capital	Gender equality (SDG 5)
	Decent work and economic growth (SDG 8)

	Sustainability indicator ⁶	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	80.33%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	23.80%
3.	Gender equality (SDG 5)	97.98%
4.	Decent work and economic growth (SDG 8)	55.14%
5.	Industry, innovation and infrastructure (SDG 9)	21.55%
6.	Responsible consumption and production (SDG 12)	58.63%
7.	Climate Action (SDG 13)	66.04%
8.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁷	72.10 tonnes CO ₂ e / M\$

⁶ The first two indicators are as at 31 December 2024.

⁷ Details of how the PAIs have performed are available upon request.

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods in accordance with the process set out above.

	Sustainability indicator⁸	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
9.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	80.33%	NA	NA
10.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	23.80%	NA	NA
11.	Gender equality (SDG 5)	97.98%	68.17%	44.89%
12.	Decent work and economic growth (SDG 8)	55.14%	36.78%	18.97%
13.	Industry, innovation and infrastructure (SDG 9)	21.55%	20.54%	21.16%
14.	Responsible consumption and production (SDG 12)	58.63%	34.82%	22.44%
15.	Climate Action (SDG 13)	66.04%	54.77%	50.14%
16.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁹	72.10 tonnes CO2e / M\$	104.64 tonnes CO2e / M\$	120.08 tonnes CO2e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

⁸ The first two indicators are as at 31 December 2024.

⁹ Details of how the PAIs have performed are available upon request.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Overall Environmental Alignment to the SDGs
- Overall Social Alignment to the SDGs
- Gender equality (SDG 5);
- Decent work and economic growth (SDG 8);
- Industry, innovation and infrastructure (SDG 9);
- Responsible consumption and production (SDG 12); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary

13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 31 December 2024

Top 15 Holdings (31 March 2024)

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows

the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).¹⁰¹¹

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: <https://www.man.com/products/man-ri-global-sustainable-growth-alternative#documents>

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹²

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Information Technology	27.93%
Health Care	24.53%
Consumer Discretionary	19.08%
Industrials	13.59%
Financials	9.43%
Consumer Staples	8.72%
Materials	3.58%

Q1 Sub- Sector Breakdown (31 March 2024)	% Capital
Electric Utilities	-0.21%
Independent Power Producers & Energy Traders	0.00%
Integrated Oil & Gas	-0.02%
Multi-Utilities	-0.26%
Oil & Gas Exploration & Production	0.00%
Oil & Gas Refining & Marketing	0.00%
Oil & Gas Storage & Transportation	-0.01%

Q2 Sector Breakdown (30 June 2024)	% Capital
Information Technology	33.04%
Health Care	25.96%

¹⁰ Please note that the Portfolio employs leverage and may at times be more than 100% invested. The second asset allocation table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed in the second table total more than 100%.

¹¹ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹² For the purposes of this section, please note that the Portfolio employs leverage and was at times more than 100% invested. The tables in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total more than 100%.

Consumer Discretionary	19.17%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹³, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹³ Delegated Regulation (EU) 2023/2486 of 27 June 2023

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁴?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

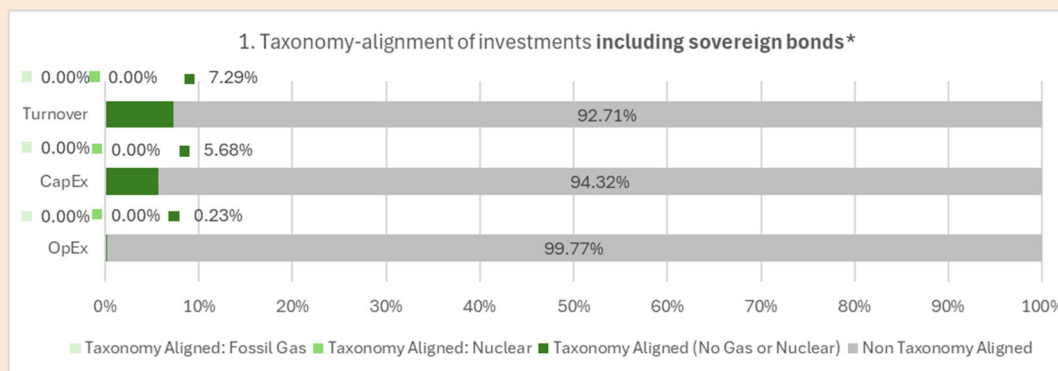

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹⁵ made in transitional and enabling activities were as follows:

¹⁵ Daily notional Value

	Transition Aligned	Enabling Aligned
Turnover	0.00%	7.28%
CapEx	0.34%	5.28%
OpEx	0.23%	0.00%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

7.29% of the Portfolio’s investments were in Taxonomy-aligned investments as at 31 December 2024 (calculated as a percentage of net long exposure), compared to 0.79% as at 31 December 2023 and 0.00% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 62.30% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 57.36% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn’t have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio’s objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 23.80% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 21.92% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man GLG Senior Secured Opportunities (the “Portfolio”)
Legal entity identifier: 254900AM81WH3545XD25

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 27.63% ¹ of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

¹ Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²
- the use of renewable energy; and
- the reduction of greenhouse gas ("**GHG**") emissions.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- fostering social cohesion

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 27.63% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 6.18% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("**SDGs**"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs. If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as "contributing to" the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio's minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio's NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁵

³ Details of how the PAIs have performed are available upon request.

⁴ Please note SDG 13 (Climate Action) was removed in November 2024. The sustainability indicators 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs' and 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs' were added in November 2024.

⁵ Details of how the PAIs performed are available upon request.

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Fostering social cohesion	No poverty (SDG 1)
	Gender equality (SDG 5)

	Sustainability indicator ⁶	Alignment (as an average [% of NAV] for reference period ending 31 December 2023)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	19.77%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	11.07%
3.	No poverty (SDG 1)	4.88%
4.	Gender equality (SDG 5)	18.57%
5.	Affordable and clean energy (SDG 7)	1.45%
6.	Climate Action (SDG 13)	10.43%
7.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁷	94.96 tonnes of CO ₂ e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods in accordance with the process set out above.

⁶ The first two indicators are as at 31 December 2024.

⁷ Details of how the PAIs have performed are available upon request.

	Sustainability indicator ⁸	Alignment (as an average % of NAV for reference period ending 31 December 2024)	Alignment (as an average % of NAV for reference period ending 31 December 2023)	Alignment (as an average % of NAV for reference period ending 31 December 2022)
8.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	19.77%	NA	NA
9.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	11.07%	NA	NA
10.	No poverty (SDG 1)	4.88%	10.10%	9.74%
11.	Gender equality (SDG 5)	18.575	28.78%	24.28%
12.	Affordable and clean energy (SDG 7)	1.45%	5.39%	4.95%
13.	Climate Action (SDG 13)	10.43%	15.73%	11.55%
14.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁹	94.96 tonnes of CO ₂ e / M\$	30.10 tonnes of CO ₂ e / M\$	35.56 tonnes of CO ₂ e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Overall Environmental Alignment to the SDGs

⁸ The first two indicators are as at 31 December 2024.

⁹ Details of how the PAIs have performed are available upon request.

- Overall Social Alignment to the SDGs
- No poverty (SDG 1);
- Gender inequality (SDG 5);
- Affordable and clean energy (SDG 7); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”), namely:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed

by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries

16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary
-----	---	--	--------

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to make the investment;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

Top 15 Holdings (31 March 2024)

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows

the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).¹⁰¹¹

For historical asset allocation please refer to the previous years Fund's annual reports available on www.man.com.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹²

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Financials	24.00%
Consumer Discretionary	23.94%
Industrials	13.03%
Communication Services	10.77%
Consumer Staples	8.39%
Real Estate	5.69%
Health Care	3.70%
Materials	3.51%
Information Technology	2.97%
Utilities	2.29%
Unclassified	1.93%
Energy	1.57%

Q1 Sub- Sector Breakdown (31 March 2024)	% Capital
Electric Utilities	1.16%
Integrated Oil & Gas	-2.19%
Oil & Gas Equipment & Services	1.57%

Q2 Sector Breakdown (30 June 2024)	% Capital
------------------------------------	-----------

¹⁰ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

¹¹ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹² For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

Financials	19.16%
Consumer Discretionary	17.79%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹³, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

¹³ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁴?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

The first graph (including sovereign bonds) represents 100% of the netted long exposure. The second graph (excluding sovereign bonds) represents 92.92% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, there were no investments made in transitional and enabling activities for the Portfolio.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

6.18% of the Portfolio’s investments were in Taxonomy-aligned investments as at 31 December 2024 (calculated as a percentage of net long exposure), compared to 2.18% as at 31 December 2023 and 3.36% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 10.17% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 11.06% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn’t have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio’s objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 11.07%% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 11.53% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU)

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group's proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man European High Yield Opportunities (the “Portfolio”)

Legal entity identifier: 254900SUOXN1A5BP13

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 25.96% ¹ of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

¹ Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²
- the use of renewable energy; and
- the reduction of greenhouse gas ("**GHG**") emissions.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- fostering social cohesion.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 25.96% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 4.63% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("**SDGs**"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs. If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as "contributing to" the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio's minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio's NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁵
Social	

³ Details of how the PAIs have performed are available upon request.

⁴ Please note SDG 13 (Climate Action) was removed in November 2024. The sustainability indicators 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs' and 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs' were added in November 2024.

⁵ Details of how the PAIs performed are available upon request.

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Fostering social cohesion	No poverty (SDG 1)
	Gender equality (SDG 5)

	Sustainability indicator ⁶	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	20.75%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	10.53%
3.	No poverty (SDG 1)	7.89%
4.	Gender equality (SDG 5)	30.90%
5.	Affordable and clean energy (SDG 7)	4.39%
6.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁷	122.94 tonnes CO ₂ e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods in accordance with the process set out above.

	Sustainability indicator ⁸	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
7.	Overall positive Environmental SDG Alignment based on the	20.75%	NA	NA

⁶ The first two indicators are as at 31 December 2024.

⁷ Details of how the PAIs have performed are available upon request.

⁸ The first two indicators are as at 31 December 2024.

	Sustainability indicator ⁸	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
	alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs			
8.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	10.53%	NA	NA
9.	No poverty (SDG 1)	7.89%	11.95%	15.16%
10.	Gender equality (SDG 5)	30.90%	30.51%	23.57%
11.	Affordable and clean energy (SDG 7)	4.39%	6.36%	4.85%
12.	Climate Action (SDG 13)	NA	17.59%	9.02%
13.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁹	122.94 tonnes CO2e / M\$	40.76 tonnes CO2e / M\$	80.40 tonnes CO2e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Overall positive Environmental SDG Alignment
- No poverty (SDG 1);
- Gender equality (SDG 5);
- Affordable and clean energy (SDG 7); and
- Climate action (SDG 13).

⁹ Details of how the PAIs have performed are available upon request.

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above

indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to make the investment;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period ending 31 December 2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation
describes the
share of
investments in
specific assets.

The asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows

the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).¹⁰¹¹

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹²

Q1 Sector Breakdown (31 March 2024)	% Capital
Financials	33.67%
Consumer Discretionary	19.81%
Industrials	14.13%
Communication Services	10.59%
Real Estate	8.04%
Consumer Staples	7.67%
Energy	3.60%
Utilities	2.72%
Materials	2.68%
Unclassified	1.94%
Health Care	1.90%
Information Technology	1.08%

Q1 Sub- Sector Breakdown (31 March 2024)	% Capital
Electric Utilities	0.83%
Integrated Oil & Gas	-2.07%
Oil & Gas Drilling	0.42%
Oil & Gas Equipment & Services	0.93%
Oil & Gas Exploration & Production	2.25%

Q2 Sector Breakdown (30 June 2024)	% Capital
Financials	33.12%
Consumer Discretionary	18.18%
Industrials	16.59%

¹⁰ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment. **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹¹ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹² For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹³, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the

¹³ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁴?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

The first graph (including sovereign bonds) represents 100% of the netted long exposure. The second graph (excluding sovereign bonds) represents 99.07% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, there were no investments made in transitional and enabling activities for the Portfolio.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

4.63% of the Portfolio’s investments were in Taxonomy-aligned investments as at 31 December 2024 (calculated as a percentage of net long exposure), compared to 2.78% as at 31 December 2023 and 3.36% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 12.08% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 13.87% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn’t have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio’s objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 9.38% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 10.47% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group's proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man GLG RI Sustainable Credit Opportunities (the “Portfolio”)¹
Legal entity identifier: 254900X6JUCX0UIZRJ92

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<p><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No</p> <p><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made sustainable investments with a social objective: ____%</p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes</p> <p><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 35.94%² of sustainable investments</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective</p> <p><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

¹ The Portfolio closed on 13 November 2024 but ceased trading on 19 September 2024. Therefore this report covers the period from 1 January 2024 until 31 August 2024 (period during which the Fund was fully invested).
² Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- the use of renewable energy
- the reduction of greenhouse gas ("**GHG**") emissions

The social characteristic promoted by the Portfolio is:

- fostering social cohesion

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 30% of the Portfolio's NAV in sustainable investments was met. As at 31 August 2024 the Portfolio had 35.94% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 13.15% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("**SDGs**"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 30% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 30% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S'

(social) SDGs . If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 August 2024. Other metrics are shown in different units as set out in the table of alignment .³

Promoted characteristic	Sustainability indicator
Environmental	
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁴
Social	
Fostering social cohesion	No poverty (SDG 1)
	Gender equality (SDG 5)

	Sustainability indicator	Alignment (as an average for reference period ending 31 August 2024)
1.	No poverty (SDG 1)	9.46%
2.	Gender equality (SDG 5)	29.83%

³ Details of how the PAIs have performed are available upon request.

⁴ Details of how the PAIs performed are available upon request.

	Sustainability indicator	Alignment (as an average for reference period ending 31 August 2024)
3.	Affordable and clean energy (SDG 7)	30.63%
4.	Climate Action (SDG 13)	20.78%
5.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁵	47.46 tonnes CO ₂ e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods in accordance with the process set out above.

	Sustainability indicator ⁶	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
6.	No poverty (SDG 1)	9.46%	11.90%	12.47%
7.	Gender equality (SDG 5)	29.83%	36.69%	35.25%
8.	Affordable and clean energy (SDG 7)	30.63%	10.88%	11.06%
9.	Climate Action (SDG 13)	20.78%	22.98%	21.09%
10.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁷	47.46 tonnes CO ₂ e / M\$	38.57 tonnes CO ₂ e / M\$	72.24 tonnes CO ₂ e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- No poverty (SDG 1);

⁵ Details of how the PAIs have performed are available upon request.

⁶ The first two indicators are as at 31 December 2024.

⁷ Details of how the PAIs have performed are available upon request.

- Gender equality (SDG 5);
- Affordable and clean energy (SDG 7); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”), namely:

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries

16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary
-----	---	--	--------

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 19 September 2024.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The asset allocation of the Portfolio has been calculated as at 31 August 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).⁸

⁸ Although the Portfolio’s prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio’s NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio’s overall investment exposure may be limited at the Investment Manager’s discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment. **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories “Taxonomy-aligned”, “Other environmental” and “Social” is not equal to “#1A Sustainable”.

For historical asset allocation please refer to the previous years Fund's annual reports available on www.man.com.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.⁹

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Financials	28.51%
Consumer Discretionary	17.82%
Consumer Staples	9.86%
Industrials	8.44%
Communication Services	8.03%
Health Care	7.24%
Real Estate	5.67%
Utilities	3.79%
Materials	3.30%
Unclassified	1.83%

Q2 Sector Breakdown (30 June 2024)	% Capital
Financials	30.63%
Consumer Discretionary	10.61%
Consumer Staples	10.52%
Health Care	10.11%
Industrials	9.97%
Communication Services	6.76%
Real Estate	5.36%
Materials	4.17%
Utilities	3.91%
Unclassified	2.60%

Q3 Sector Breakdown (30 August 2024)	% Capital
Financials	3.68%
Industrials	1.98%
Real Estate	1.61%

⁹ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

Q3 Sub- Sector Breakdown (30 August 2024)	% Capital
Electric Utilities	0.93%
Independent Power Producers & Energy Traders	0.90%
Integrated Oil & Gas	0.00%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹⁰, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

¹⁰ Delegated Regulation (EU) 2023/2486 of 27 June 2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

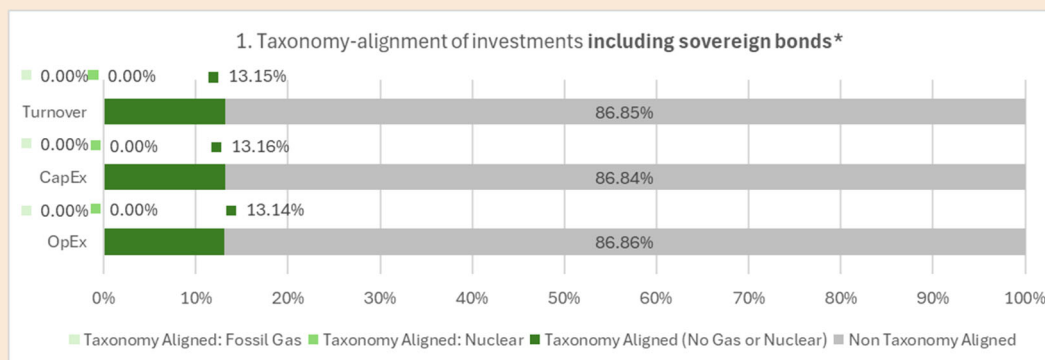

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

¹¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 19 September 2024, there were no investments made in transitional and enabling activities for the Portfolio.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

13.15% of the Portfolio's investments were in Taxonomy-aligned investments as at 19 September 2024 (calculated as a percentage of net long exposure), compared to 6.73% as at 31 December

2023 and 11.48% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 10.34% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 11.99% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 14.27% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 16.55% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;

- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;
- Man Group’s proprietary engagement tool was used by the investment and stewardship teams to review, record and track engagements with companies. The Engagement Tool captures key information on the life cycle of an engagement activity, including type of interaction, key stakeholders, ESG objectives, milestones, next steps and outcomes;
- engagement activities were carried out dependent on the materiality of the issue at stake.

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

ANNEX V

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Man Funds VI plc – Man TargetClimate (the “Portfolio”)

Legal entity identifier: 254900NK47SQD18T1A11

Sustainable investment objective

¹ Measured as a percentage of Net Asset Value (NAV).
² Measured as a percentage of Net Asset Value (NAV).

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Portfolio is to invest in a range of assets which the Investment Manager believes will contribute to climate change mitigation.

The sustainable investments contribute to climate change mitigation by being aligned with the transition to a low carbon economy and climate change mitigation³. The Investment Manager selects investments by using environmental scoring metrics with a focus on climate change mitigation.

During the reference period this sustainable investment objective was met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Environmental, social and governance ("ESG") scoring criteria :
 - Investment were selected by using environmental scoring metrics with a focus on climate change mitigation; and determining the position size by using systematic algorithms to adjust the exposure to particular positions. Environmental scoring is based on the analysis of a triangulation of environmental metrics from a range of third-party providers. Triangulation involves combining and interpreting environmental metrics and scoring from a number of providers to exclude any fundamental biases or outliers which could arise from the use of a single source and identify common views. Third-party metrics may be supplemented by proprietary scoring from the Investment Manager. Investments selected were deemed ultimately to be aligned with the transition to a low carbon economy and climate change mitigation and contribute to the sustainable investment objective.
 - For equities and corporate bonds, this process was applied following application of Man Group's proprietary **SDG Framework** (as described further below). The Portfolio was allowed to invest in companies with a positive SDG exposure based on the SDG Framework. This is based on alignment with the environmentally related SDGs and provided the initial investment universe for the Portfolio.
 - For government bonds, the Investment Manager selected the top scoring government bonds by applying an environmental scoring methodology using third party, and potentially proprietary, data. As part of this process, data was combined to form an aggregate score for each security from an environmental perspective, for example by applying a weight to a data point, (such as (i) carbon intensity; (ii) carbon emissions; or (iii) the environmental scores from third party providers). The aim of the process was to generate a government bond allocation containing only those governments who are most climate aligned. Developed Markets and Emerging Markets countries were assessed relative to their peers.
 - For commodities, the Portfolio obtained exposure to commodities through UCITS compliant commodity index swaps. The Investment Manager used a commodity scoring framework aimed at identifying commodities that were

³ The transition to low carbon economy being one specific action pathway to address climate change and climate change mitigation being itself a broader concept encompassing all efforts to reduce/prevent greenhouse gas emissions.

deemed to be essential for the transition to a low carbon economy. Those would typically be commodities whose usage is expected to provide environmental benefits. For the purposes of the swap, the Investment Manager then selected a UCITS compliant index that is comprised of such commodities

- For FDI, with respect to investment in FDI used to obtain long exposure to the above asset classes, the environmental scoring methodology was applied to the assets underlying each FDI, in the manner outlined above for that asset class.
- Please note that following this methodology 158.66% of the Portfolio's NAV were identified to be sustainable investments during the reference period meeting the Portfolio's minimum commitment of 90% sustainable investments as set in the pre-contractual disclosures. Note that the minimum required of 70% towards an environmental objective was also met, as the Fund made 104.14.% of its investments towards such objective (versus 54.52% towards a soail objective).
- Man Group's RI exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.

The Portfolio had 3% taxonomy alignment minimum commitment (expressed as percentage's of net long exposure⁴). As at 31 December 2024, the Fund had 10.99% of its investments taxonomy-aligned.

● *How did the sustainability indicators perform?*

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("**SDGs**").⁵ The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 90% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 3% of the Portfolio's NAV in sustainable investments with an environmental objective aligned with the EU Taxonomy; as well as ensuring the ESG credentials of all investees companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs². If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both. The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in

⁴ As required under Article 17 of the SFDR Delegated regulation.

⁵ There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below). The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024.

All figures are calculated as a percentage of the Portfolio’s NAV. Metrics are shown in units as set out in the table of results. Other metrics are shown in different units as included in the table of results⁶.

Sustainable investment objective	Sustainability indicator
Environmental	
Climate change mitigation	Weighted Average Carbon Intensity (WACI) – Scope 1 and 2 Emissions
	MSCI Environmental Pillar Score
	Overall positive alignment to the UN Sustainable Development Goals (the “SDGs”) ⁷

	Sustainability indicator ⁸	Alignment (as an average for reference period ending 31 December 2024)
1.	Weighted Average Carbon Intensity (WACI) – Scope 1 and 2 Emissions (PAI 3)	27.99 tonnes CO2 / M\$
2.	MSCI Environmental Pillar Score	71.05 ⁹
3.	Overall positive alignment to the UN Sustainable Development Goals (the “SDGs”)	104.14% ¹⁰

⁶ Details of how the PAIs have performed are available upon request.

⁷ This indicator was added in November 2024.

⁸ The third indicator is as at 31 December 2024.

⁹ The MSCI Environmental Pillar Score measures management of and exposure to key environmental risks and opportunities for each issuer in the portfolio weighted by the percentage holding. Scores range from 100 (best) to 0 (worst).

¹⁰ This figure represents the % of true invested capital accordingly, the percentages listed total more than 100%.

● *...and compared to previous periods?*

	Sustainability indicator	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)	Alignment (as an average for reference period ending 31 December 2022)
1.	Weighted Average Carbon Intensity (WACI) – Scope 1 and 2 Emissions (PAI 3)	27.99 tonnes CO ₂ / M\$	37.66 tonnes CO ₂ / M\$	33.9 tonnes CO ₂ / M\$
2.	MSCI Environmental Pillar Score	71.05	60.60	57.6
3.	Overall positive alignment to the UN Sustainable Development Goals (the "SDGs")	104.14%	NA	NA

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

● *How did the sustainable investments not cause significant harm to any sustainable investment objective?*

One of the requirements for an investment to be considered "sustainable" is that the investment must do no significant harm ("DNSH") to environmental or social objectives (the "DNSH Test"). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts ("PAI") indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the "RTS"), namely:

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

16.	Investee countries subject to social violations
-----	---

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer's industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a "sustainable investment".

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

how were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer's industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer's GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio sought to avoid or reduce negative externalities caused by the underlying investments and in that context considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators (All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.)

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO ₂) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO ₂ /\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO ₂ /\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary

13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to make the investment;

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Capital" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period ending 31 December 2024.

What was the proportion of sustainability-related investments?

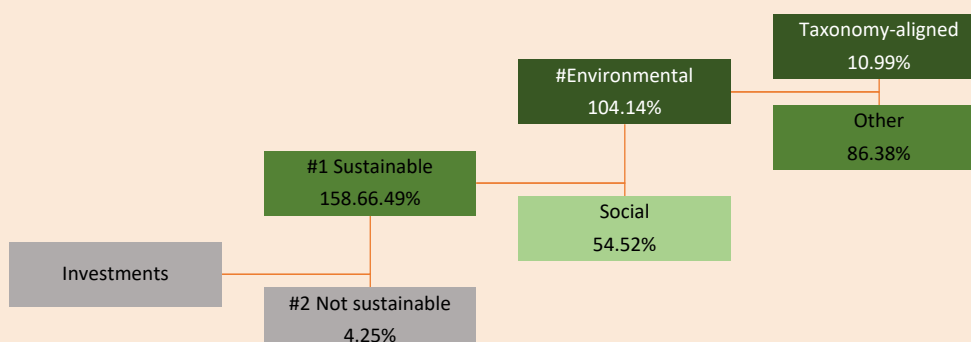

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as at 31 December 2023. The first asset allocation table below shows the % of net long exposure; the second table shows the % of NAV.¹¹

Data shown as a percentage of net long exposure

Data shown as a percentage of NAV¹²

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

¹¹ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that leverage was employed by the Portfolio as part of its investment strategy and therefore, from time to time, it would have had total investment exposure greater than NAV. Figures in the second table (other than Taxonomy-aligned) are expressed as a percentage of NAV. Cash, hedging, remaining short positions and index positions are not included in the allocation chart and are not considered to be sustainable investments.

¹² The Taxonomy-aligned figure is calculated as a percentage of net long exposure and, accordingly, the breakdown of environmentally sustainable investments total less than the figure given for #Environmental investments.

● *In which economic sectors were the investments made?*

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹³

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)		% Capital
Government		47.98%
Financials		23.55%
Unclassified		22.69%
Health Care		16.11%
Information Technology		13.76%
Industrials		12.46%
Consumer Staples		11.32%
Consumer Discretionary		10.07%
Communication Services		9.04%
Real Estate		5.53%
Materials		5.43%
Utilities		5.25%
Energy		0.16%
Q1 sub-sector breakdown (31 March 2024)		
Coal & Consumable Fuels		0.16%
Electric Utilities		3.21%
Multi-Utilities		1.06%
Q2 Sector Breakdown (30 June 2024)		% Capital
Government		50.30%
Financials		26.99%
Unclassified		20.44%
Health Care		17.56%
Industrials		14.35%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

The Portfolio committed to invest a minimum of 3% of the Portfolio's NAV in environmentally sustainable activities aligned with the EU Taxonomy. Details of the extent to which sustainable investments with an environmental objective were aligned with the EU Taxonomy during the reference period are set out below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹⁴, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

¹⁴ Delegated Regulation (EU) 2023/2486 of 27 June 2023

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹⁵?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

¹⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The first graph (including sovereign bonds) represents 100% of the netted long exposure. The second graph (excluding sovereign bonds) represents 77.07% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

As at 31 December 2024, the Portfolio had met its EU Taxonomy commitments as per its pre-contractual disclosures (in the prospectus Annex) as a percentage of NAV and as a percentage of Total Net Long Issuer Exposure.

● **What was the share of investments made in transitional and enabling activities?**

As at 31 December 2024, the share of investments¹⁶ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.00%	0.63%
CapEx	0.00%	0.16%
OpEx	0.00%	0.03%

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

10.99% of the Portfolio's investments (including sovereign bonds) were in Taxonomy-aligned investments as at 31 December 2024, compared to 5.38% as at 31 December 2023 and 3.16% as at 31 December 2022. As noted above, the Investment Manager relies on partial data.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Portfolio made 86.38% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 52.94% of its investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure. On the basis that the taxonomy commitment for the Fund was low, this percentage is in line with expectations as per pre-contractual disclosures.

What was the share of socially sustainable investments?

The Portfolio made 54.52% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 33.47% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

The social objectives of the Sustainable Investments was the support of the social SDGs which contribute to the "Overall positive alignment to the UN Sustainable Development Goals (the "SDGs")" which include a blended score across SDGs 1-15 but those considered socially aligned are 1-13: 1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production and (13) climate action.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

¹⁶ Daily notional Value

The investments included under “not sustainable” include investments that were previously classified as sustainable investments which were no longer sustainable but which had not yet been divested. These investments are subject to minimum environmental or social safeguards.¹⁷

What actions have been taken to attain the sustainable investment objective during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis;
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager’s due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials.
- the Investment Manager closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference sustainable benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

● *How did the reference benchmark differ from a broad market index?*

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of meeting the sustainable investment objective of the Portfolio.

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?*

Not applicable.

● *How did this financial product perform compared with the reference benchmark?*

Not applicable.

¹⁷ Cash, hedging, remaining short positions and index positions are not included in the allocation chart and are not considered to be sustainable investments.

● ***How did this financial product perform compared with the broad market index?***

Not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man European Leaders Alternative (the “Portfolio”)
Legal entity identifier: 254900BKF5HIZ400YT37

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes
<input type="checkbox"/> It made sustainable investments with an environmental objective: ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective: ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 54.69% ¹ of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

¹ Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs");² and
- the reduction of greenhouse gas ("GHG") emissions.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs;
- tackling inequality; and
- labour relations.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 54.69% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 0.29% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process (the "**SDG Framework**") to measure the extent of an issuer's alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

combines data from three external providers in order to measure the extent of an issuer's alignment to the SDGs. An 'alignment score' to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for 'E' (environmental) and 'S' (social) based on an average of the scores for the relevant 'E' (environmental) and 'S' (social) SDGs. If an issuer's alignment score is greater than or equal to 0.5 for 'E' (environmental) and/or 'S' (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as "contributing to" the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio's minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio's NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The reduction of GHG emissions	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁵
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Tackling inequality	Gender equality (SDG 5)

³ Details of how the PAIs have performed are available upon request.

⁴ Please note SDG 13 (Climate Action) was removed in November 2024. The sustainability indicators 'Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs' and 'Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs' were added in November 2024.

⁵ Details of how the PAIs performed are available upon request.

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Labour relations	Decent work and economic growth (SDG 8)

	Sustainability indicator ⁶	Alignment (as an average for reference period ending 31 December 2023)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	35.26%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	19.42%
3.	Gender equality (SDG 5)	74.35%
4.	Decent work and economic growth (SDG 8)	57.33%
5.	Climate action (SDG 13)	39.68%
6.	GHG intensity of investee companies (PAI 3)	72.34 tonnes CO ₂ e / M\$

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods in accordance with the process set out above.

	Sustainability indicator ⁷	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)
1	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	35.26%	NA
2	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as	19.42%	NA

⁶ The first two indicators are as at 31 December 2024.

⁷ The first two indicators are as at 31 December 2024.

	Sustainability indicator ⁷	Alignment (as an average for reference period ending 31 December 2024)	Alignment (as an average for reference period ending 31 December 2023)
	set out below) in respect of the socially aligned SDGs		
3	Gender equality (SDG 5)	74.35%	60.29%
4	Decent work and economic growth (SDG 8)	57.33%	31.55%
5	Climate action (SDG 13)	39.68%	35.56%
6	GHG intensity of investee companies (PAI 3)	72.34 tonnes CO ₂ e / M\$	97.31 tonnes CO ₂ e / M\$

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Overall Environmental Alignment to the SDGs
- Overall Social Alignment to the SDGs
- gender equality (SDG 5);
- decent work and economic growth (SDG 8); and
- climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“PAI”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “RTS”), namely:

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global

Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment

against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio's investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to invest;

The impact of the Portfolio's investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column "% Assets" refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period ending 31 December 2024

Top 15 Holdings (31 March 2024)

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table

Asset allocation
describes the
share of
investments in
specific assets.

shows the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).⁸⁹

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: <https://www.man.com/products/man-european-leaders-alternative#documents>.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹⁰

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q1 Sector Breakdown (31 March 2024)	% Capital
Industrials	20.99%
Consumer Discretionary	13.98%
Information Technology	10.55%
Communication Services	10.17%
Consumer Staples	10.14%
Materials	7.90%
Financials	6.46%
Real Estate	5.50%
Health Care	5.23%

Q1 Sub- Sector Breakdown (31 March 2024)	% Capital
Oil & Gas Equipment & Services	-0.26%

Q2 Sector Breakdown (30 June 2024)	% Capital
Industrials	20.23%
Consumer Discretionary	11.21%
Information Technology	10.89%
Health Care	9.09%

⁸ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

⁹ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹⁰ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

Communication Services	7.65%
Consumer Staples	5.34%
Real Estate	5.27%
Financials	4.08%
Utilities	3.38%

Q2 Sub- Sector Breakdown (30 June 2024)	% Capital
Multi-Utilities	3.48%
Oil & Gas Equipment & Services	-0.97%

Q3 Sector Breakdown (30 September 2024)	% Capital
Industrials	36.34%
Health Care	10.09%
Information Technology	9.62%
Consumer Discretionary	7.13%

Q4 Sub- Sector Breakdown (31 December 2024)	% Capital
Integrated Oil & Gas	0.39%
Oil & Gas Equipment & Services	-0.87%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹¹, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹²?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

¹¹ Delegated Regulation (EU) 2023/2486 of 27 June 2023

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹³ made in transitional and enabling activities were as follows:

¹³ Daily notional Value

	Transition Aligned	Enabling Aligned
Turnover	0.01%	0.28%
CapEx	0.00%	0.27%
OpEx	0.07%	0.03%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

0.29% of the Portfolio's investments were in Taxonomy-aligned investments as at 31 December 2024 (calculated as a percentage of net long exposure), compared to 1.11% as at 31 December 2023. As noted above, the Investment Manager relies on partial data.

Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 35.07% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 53.75% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 19.42% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 29.76% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The "#Other" investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man Financial Credit Opportunities (the “Portfolio”)
Legal entity identifier: 2549005XFICNG039FK95

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes
<input type="checkbox"/> It made sustainable investments with an environmental objective : ____% <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It made sustainable investments with a social objective : ____%	<input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 53.49% ¹ of sustainable investments <input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective <input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments

¹ Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs")²
- the use of renewable energy; and
- the reduction of greenhouse gas ("GHG") emissions.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- fostering social cohesion.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures. In addition companies determined to be in non-compliance with the United Nations Global Compact were excluded.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 20% of the Portfolio's NAV in sustainable investments was met. As at 31 December 2024 the Portfolio had 53.49% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 5.91% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 20% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 20% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an environmental or social objective. The Investment Manager has implemented a proprietary process

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

² There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

(the “**SDG Framework**”) to measure the extent of an issuer’s alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer’s alignment to the SDGs. An ‘alignment score’ to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs. If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end during the reference period ending 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.³

Promoted characteristic	Sustainability indicator ⁴
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The reduction of GHG emissions	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)

³ Details of how the PAIs have performed are available upon request.

⁴ Please note, sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

Promoted characteristic	Sustainability indicator ⁴
Environmental	
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁵
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Fostering social cohesion	
	Gender equality (SDG 5)

	Sustainability indicator ⁶	Alignment (as an average % of NAV for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	40.00%
2.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	18.71%
3.	Gender equality (SDG 5)	60.88%
4.	Affordable and clean energy (SDG 7)	20.55%
5.	Climate action (SDG 13)	33.95%
6.	GHG intensity of investee companies (PAI 3)	70.42 tonnes CO2/\$M

...and compared to previous periods?

The table below sets out the alignment of the investments of the Portfolio to each sustainability indicator for previous reporting periods in accordance with the process set out above.

⁵ Details of how the PAIs performed are available upon request.

⁶ The first two indicators are as at 31 December 2024.

	Sustainability indicator ⁷	Alignment (as an average % of NAV for reference period ending 31 December 2024)	Alignment (as an average % of NAV for reference period ending 31 December 2023)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	40.00%	NA
2.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	18.71%	NA
3.	Gender equality (SDG 5)	60.88%	72.35%
4.	Affordable and clean energy (SDG 7)	20.55%	25.86%
5.	Climate action (SDG 13)	33.95%	44.54%
6.	GHG intensity of investee companies (PAI 3)	70.42 tonnes CO2/\$M	5.55 tonnes CO2/\$M

None of the indicators are subject to an assurance provided by an auditor or a review by a third party.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Overall Environmental Alignment to the SDGs
- Overall Social Alignment to the SDGs
- gender equality (SDG 5);
- affordable and clean energy (SDG 7); and
- climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

⁷ The first two indicators are as at 31 December 2024.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”)

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s

industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Portfolio considered the PAI of its investment decisions on sustainability factors by evaluating such decisions against the following PAI indicators: certain mandatory indicators as specified in Table 1 of Annex I.

The Investment Manager considered the following indicators for the Portfolio. All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Selection of mandatory PAIs (from Table 1 of Annex I of the RTS)		Type of metric used for each PAI	Monitoring
1.	GHG emissions	GHG Emissions Scope 1,2 & 3 (tonnes CO2) per issuer	Numerical Out put - Industry relative
2.	Carbon footprint	Tonnes CO2/\$1million invested	Numerical Out put - Industry relative
3.	GHG intensity of investee companies	Tonnes CO2/\$1million revenue of the issuer	Numerical Out put - Industry relative
4.	Exposure to companies active in the fossil fuel sector	Investments in companies active in the fossil fuel sector	Revenues greater than 50%
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	Binary
13.	Board gender diversity	Average Ratio of female to male board members of the investee company	Numerical Out put - Industry relative
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exposure to anti-personnel mines, cluster munitions, chemical weapons and biological weapons.	Binary
15.	GHG intensity	GHG Intensity of sovereign issuer	Numerical Output - Bottom decile of Emerging Market and Developed Market Countries
16.	Investee countries subject to social violations	Investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	Binary

The Investment Manager conducted investment due diligence on every investment (data availability permitting), including a quantitative assessment of the impact of the investment

against the above indicators, to assess any adverse harm identified by those indicators. For example, if a metric produces a numerical output for a given investment, the Investment Manager considers that the investment causes adverse impact if the investment is in the bottom decile relative to the industry sector of the issuer. If a metric produces a binary output for a given investment the Investment Manager considers that the investment causes adverse impact if the investment falls onto the harmful side of the binary output. The Investment Manager also assessed the adverse impacts based on materiality in respect of each relevant sector and jurisdiction.

Following the quantitative and materiality assessments, the Investment Manager decided what action to take, with a view to limiting or reducing the identified adverse impact. Such action included (subject at all times to the obligation of the Investment Manager to act in the best interests of the Portfolio and its investors in accordance with the Portfolio’s investment objectives and policy):

- providing an explanation as to why the adverse harm is not a material risk;
- deciding not to make the investment;
- making the investment with an intention to engage with the management of the issuer to improve their business from a sustainability perspective.

The impact of the Portfolio’s investments against the aforementioned indicators was monitored and reviewed on a semi-annual basis. Details of actions taken at issuer level are available from the Investment Manager upon request.

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column “% Assets” refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 31 December 2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table

Asset allocation describes the share of investments in specific assets.

shows the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).⁸⁹

For historical asset allocation please refer to the previous years Fund annual reports available from the Portfolio's webpage: <https://www.man.com/products/man-financial-credit-opportunities#documents>.

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in 2024. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹⁰

No breakdown for sub-sectors breakdown is provided as there is no exposure to sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels.

Q1 Sector Breakdown (31 March 2024)	% Capital
Financials	100.09%
Real Estate	0.38%
Q2 Sector Breakdown (30 June 2024)	% Capital
Financials	93.98%

Financials	108.80%
Real Estate	0.35%
Q4 Sector Breakdown (31 December 2024)	% Capital
Financials	96.97%
Real Estate	0.35%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

⁸ Although the Portfolio's prospectus mentioned that the Investment Manager committed to invest a minimum of the Portfolio's NAV in sustainable investments, please note that as allowed by the prospectus, the Portfolio's overall investment exposure may be limited at the Investment Manager's discretion in the best interest of the Portfolio due to a variety of reasons (such as insufficient investment opportunities and macro-economic events). Therefore, from time to time, the Portfolio would have had total investment exposure considerably less than its NAV. The figures in the second asset allocation table represent the true % of invested capital (except for Taxonomy alignment) and, accordingly, the percentages listed total less than 100%. Cash is not considered as an investment.

⁹ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

¹⁰ For the purposes of this section, please note that the Portfolio may at times be under-invested. The table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed total less than 100%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹¹, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹²?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

¹¹ Delegated Regulation (EU) 2023/2486 of 27 June 2023

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, there were no investments made in transitional and enabling activities for the Portfolio.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

5.91% of the Portfolio’s investments were in Taxonomy-aligned investments as at 31 December 2024 (calculated as a percentage of net long exposure), compared to 48.75% as at 31 December 2023. As noted above, the Investment Manager relies on partial data.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 31.92% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 34.73% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn’t have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio’s objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 13.94% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 14.32% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The “#Other” investments made by the Portfolio included investments which did not match the Portfolio’s ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;

- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager’s due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Man Funds VI plc – Man Systematic RI Equity Alternative (the “Portfolio”)¹
Legal entity identifier: 254900RB63DFNU1SEQ64

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<p><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> No</p> <p><input type="checkbox"/> It made sustainable investments with an environmental objective: ____%</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made sustainable investments with a social objective: ____%</p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> Yes</p> <p><input checked="" type="checkbox"/> It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 142.52%² of sustainable investments</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy with a social objective</p> <p><input checked="" type="checkbox"/> It promoted E/S characteristics, but did not make any sustainable investments</p>

¹ Please note that the Portfolio launched on 17 June 2024 Accordingly, this report covers the period from 17 June 2024 to 31 December 2024 only.

² Measured as a percentage of the Portfolio’s Net Asset Value (NAV)

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental characteristics promoted by the Portfolio are:

- environmental alignment to the UN Sustainable Development Goals (the "SDGs");³
- the use of renewable energy;
- the mitigation of climate change;
- the circular economy; and
- the sustainable use of water.

The social characteristics promoted by the Portfolio are:

- social alignment to the SDGs; and
- tackling inequality.

During the reference period these characteristics were met by the Portfolio as further set out below.

Compliance with the binding elements applied to the Portfolio were met during the reference period:

- Man Group exclusion policy was applied to all corporate issuers as detailed in the pre-contractual disclosures.
- The Portfolio made sustainable investments during the reference period. The Portfolio minimum commitment to invest minimum of 50% of the Portfolio's NAV in sustainable investments was met. As at 19 September 2024 the Portfolio had 142.52% of its NAV in sustainable investments. The objectives of the sustainable investments and how the sustainable investments contributed to such objectives are set out below.

Although the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, the Portfolio did make 5.56% of Taxonomy-aligned investments during the reference period (expressed as a percentage of Net long exposure). Further details of the extent of Taxonomy-alignment of the investments made by the Portfolio are set out below..

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The attainment of the environmental and social characteristics promoted by the Portfolio was measured using the sustainability indicators specified below. The indicators are those prescribed by the UN Sustainable Development Goals ("SDGs"). The sustainability indicators have helped in maintaining the Portfolio's commitment to invest a minimum of 50% of the Portfolio's NAV in sustainable investments and maintaining a minimum of 50% of the Portfolio's NAV in investments which attain the environmental and social characteristics promoted by the Portfolio; as well as ensuring the ESG credentials of all investee companies in the investment universe. The Investment Manager uses alignment with the SDGs as its proxy for measuring contributions to an

³ There are 17 SDGs: (1) no poverty, (2) zero hunger, (3) good health and well-being, (4) quality education, (5) gender equality, (6) clean water and sanitation, (7) affordable and clean energy, (8) decent work and economic growth, (9) industry, innovation and infrastructure, (10) reduced inequalities, (11) sustainable cities and communities, (12) responsible consumption and production, (13) climate action, (14) life below water, (15) life on land, (16) peace, justice and strong institutions, and (17) partnerships for the goals.

environmental or social objective. The Investment Manager has implemented a proprietary process (the “**SDG Framework**”) to measure the extent of an issuer’s alignment to the SDGs (and, by extension, contribution to environmental or social objectives). There are 17 SDGs. The SDG Framework takes into account SDGs 1-15 (SDGs 16-17 are excluded). The SDG Framework combines data from three external providers in order to measure the extent of an issuer’s alignment to the SDGs. An ‘alignment score’ to each relevant SDG(s) is then produced for a given investment. Each issuer is measured on a scale of +5 (aligned) to -5 (misaligned) with respect to each SDG using an algorithm and the issuer is then assigned an overall alignment score for ‘E’ (environmental) and ‘S’ (social) based on an average of the scores for the relevant ‘E’ (environmental) and ‘S’ (social) SDGs. If an issuer’s alignment score is greater than or equal to 0.5 for ‘E’ (environmental) and/or ‘S’ (social) then it is considered aligned environmentally, socially, or both.

The output of this process is a list of issuers which have been formally identified as aligned with one or more environmental or social objectives based on the SDG Framework. Where the Portfolio invests in any of these issuers, those issuers are accordingly treated as “contributing to” the objective of the sustainable investments the Portfolio partially intends to make (i.e. the attainment of the SDGs).

In respect of the SDGs used as sustainability indicators table below), the Portfolio was monitored against the SDG sustainability indicators in order to ensure the Portfolio’s minimum commitment to sustainable investments (as per the asset allocation table below).

The tables below set out the sustainability indicators used to measure the promoted characteristics and the alignment (or other relevant metric) of the investments of the Portfolio to each sustainability indicator. All figures are calculated as a percentage of the portfolio’s NAV. SDGs are done as percentage of alignment, measured as the average of the alignment as at each month end from launch date until 31 December 2024. Other metrics are shown in different units as set out in the table of alignment.⁴

Promoted characteristic	Sustainability indicator ⁵
Environmental	
Environmental Alignment to the SDGs	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs
The use of renewable energy	Affordable and clean energy (SDG 7)
	Climate action (SDG 13)
The mitigation of climate change	Climate action (SDG 13)
	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3)

⁴ Details of how the PAIs have performed are available upon request.

⁵ Please note SDG 13 (Climate Action) was removed in November 2024. The sustainability indicators ‘Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework in respect of the environmentally aligned SDGs’ and ‘Overall positive Social SDG Alignment based on the alignment score under the SDG Framework in respect of the socially aligned SDGs’ were added in November 2024.

Promoted characteristic	Sustainability indicator ⁵
Environmental	
	Paris Agreement portfolio temperature alignment
The circular economy	Industry, innovation and infrastructure (SDG 9)
	Sustainable cities and communities (SDG 11)
	Responsible consumption and production (SDG 12)
The sustainable use of water	Clean water and sanitation (SDG 6)
	Responsible consumption and production (SDG 12)
Social	
Social Alignment to the SDGs	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs
Investing in economically or socially disadvantaged communities	Gender equality (SDG 5)

	Sustainability indicator ⁶	Alignment (as an average for reference period ending 31 December 2024)
1.	Overall positive Environmental SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the environmentally aligned SDGs	109.01%
2.	Overall positive Social SDG Alignment based on the alignment score under the SDG Framework (as set out below) in respect of the socially aligned SDGs	52.98%
3.	Gender equality (5)	155.22%
4.	Clean water and sanitation (SDG 6)	49.95%
5.	Affordable and clean energy (SDG 7)	97.22%

⁶ The first two indicators are as at 31 December 2024. For the purposes of this section, please note that the Portfolio employs leverage and may at times be more than 100% invested. The table in this section represents the true % of invested capital and, accordingly, the percentages listed may be more than 100%.

	Sustainability indicator ⁶	Alignment (as an average for reference period ending 31 December 2024)
6.	Industry, innovation and infrastructure (SDG 9)	89.99%
7.	Sustainable cities and communities (SDG 11)	77.69%
8.	Responsible consumption and production (SDG 12)	71.30%
9.	Climate Action (SDG 13)	94.91%
10.	GHG intensity of investee companies (weighted average carbon intensity-WACI) (PAI 3) ⁷	80.54 tonnes CO2e/M\$
11.	Paris Agreement portfolio temperature alignment	1.65 degrees celsius

None of the indicators are subject to an assurance provided by an auditor or a review by a third party

...and compared to previous periods?

Not applicable for the purposes of this periodic report, the Portfolio launched on 17 June 2024 and therefore has not published periodic reports for previous reference periods.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Portfolio made sustainable investments during the reference period. The objective of the sustainable investments that the Portfolio made is to contribute to the attainment of the SDGs. In the case of the Portfolio, the objectives of the sustainable investments that the Portfolio made during the reference period were the attainment of the SDG goals relevant to the environmental and social characteristics promoted by the Portfolio, being:

- Overall Environmental Alignment to the SDGs
- Overall Social Alignment to the SDGs
- Gender equality (SDG 5);
- Clean water and sanitation (SDG 6);
- Affordable and clean energy (SDG 7);
- Industry, innovation and infrastructure (SDG 9);

⁷ Details of how the PAIs have performed are available upon request.

- Sustainable cities and communities (SDG 11);
- Responsible consumption and production (SDG 12); and
- Climate action (SDG 13).

The sustainable investments contributed to the identified sustainable investment objective by being aligned with the relevant SDGs as set out above.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

One of the requirements for an investment to be considered “sustainable” is that the investment must do no significant harm (“DNSH”) to environmental or social objectives (the “DNSH Test”). The Investment Manager has integrated the do no significant harm test into its investment due diligence process.

The Investment Manager assessed the DNSH test by reference to the mandatory principal adverse impacts (“**PAI**”) indicators as set out in Table 1 of Annex I of the SFDR Regulatory Technical Standards (Commission Delegated Regulation (EU) 2022/1288) (the “**RTS**”), namely:

	Mandatory (from Table 1 of Annex I of the RTS)
1.	GHG emissions
2.	Carbon footprint
3.	GHG intensity of investee companies
4.	Exposure to companies active in the fossil fuel sector
5.	Share of non-renewable energy consumption and production
6.	Energy consumption intensity per high impact climate sector
7.	Activities negatively affecting biodiversity-sensitive areas
8.	Emissions to water
9.	Hazardous waste and radioactive waste ratio
10.	Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises
11.	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12.	Unadjusted gender pay gap
13.	Board gender diversity
14.	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
15.	GHG intensity
16.	Investee countries subject to social violations

This is a list of specific indicators against which the Investment Manager obtains and reviews data on adverse impacts on investments. In order to identify whether the sustainable investments the Portfolio intended to make caused significant harm in this respect, an internal review process is carried out by which a filtering process takes place using multiple external data sources and relative to each issuer’s industry, where relevant. The output of this process determines whether a sustainable investment caused significant harm. If a particular potential investment was assessed by the Investment Manager to do significant harm, then it was excluded from being treated as a “sustainable investment”.

All indicators apply to investments in corporates only, other than indicators 15 and 16 from Table 1, which apply to investments in sovereigns.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

For DNSH purposes, the Investment Manager sets its own subjective threshold of what it considers to be significant harm. The mandatory PAI indicators that were deemed to indicate the presence of a PAI were assessed and excluded, or monitored, depending on the PAI indicator.

As mentioned above, the DNSH Test involved the Investment Manager obtaining and reviewing data on adverse impacts on investments. Where applicable, for corporate issuers, this was judged on the basis of a qualitative and quantitative materiality assessment relative to the issuer’s industry, where relevant; for government issuers, this was judged on the basis of available sovereign indicators. For example, if certain metrics produced a numerical output for a given investment, the Investment Manager considered that the investment caused adverse impact if the investment was in the bottom decile relative to the issuer’s GICS (Global Industry Classification Standard) industry as used in the MSCI indices. If a metric produced a binary output for a given investment the Investment Manager considered that the investment caused adverse impact if the investment fell onto the harmful side of the binary output, for instance violations of the UN Global Compact principles and OECD Guidelines for Multinational Enterprises, exposure to controversial weapons or investee countries subject to social violations.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager ensured that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights by, as part of its investment due diligence, when investing in corporates at issuer level, considering if there is any violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Any company in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights is considered to be doing significant harm and is therefore excluded from being a sustainable investment. A company found in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was considered to do significant harm; and therefore was excluded from being treated as a sustainable investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Not applicable, the Manager and the Investment Manager do not consider the PAI of investment decisions on sustainability factors in respect of the Portfolio because the Investment Manager only operates quantitative investment strategies, which are currently not compatible with position-by-position diligence on such adverse impacts

What were the top investments of this financial product?

The top investments of the Portfolio are shown as at the end of each quarter in the reference period. Please note that for the purposes of this section, the column “% Assets” refers to the exposure to each underlying issuer as a % of the entire Portfolio capital/NAV.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period ending 31 December 2024

What was the proportion of sustainability-related investments?

What was the asset allocation?

The asset allocation of the Portfolio has been calculated as at 31 December 2024. The first asset allocation table below shows the % of net long exposure; the second asset allocation table shows the % of invested capital (at the exception of the Taxonomy alignment figure which is calculated as a percentage of net long exposure in both tables).⁸⁹

Asset allocation
describes the
share of
investments in
specific assets.

⁸ Please note that the Portfolio employs leverage and may at times be more than 100% invested. The second asset allocation table in this section represents the true % of invested capital in each sector and, accordingly, the percentages listed in the second table total more than 100%.

⁹ **Taxonomy aligned percentage:** Percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022. This means that the sum of the sub-categories "Taxonomy-aligned", "Other environmental" and "Social" is not equal to "#1A Sustainable".

In which economic sectors were the investments made?

Please see below a breakdown of the Portfolio's exposure to economic sectors as at the end of each quarter in the reference period. For the purposes of this section, please note that exposure is represented as a % of the Portfolio's capital/NAV.¹⁰

Sub-sectors breakdown is provided for sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels. When no breakdown has been provided the exposure to these sub-sectors is nil.

Q2 Sector Breakdown (30 June 2024)	% Capital
Industrials	38.30%
Financials	24.94%
Information Technology	22.02%
Health Care	21.96%

Oil & Gas Storage & Transportation	-0.92%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

While the Portfolio did not make a commitment to invest in Taxonomy-aligned investments, it did make Taxonomy-aligned investments during the reference period, as further disclosed below.

While the Portfolio made Taxonomy aligned investments during the reference period, as detailed in the asset allocation chart above, the Investment Manager relies on data from a third-party provider which are partial. Although under the EU Taxonomy Environmental Delegated Act¹¹, companies falling under the scope of the Corporate Sustainability Reporting Directive (CSRD) will need to report in 2025 (for the financial 2024) on their alignment with all six environmental objectives outlined in Article 9 of the Taxonomy Regulation; at the time of this report, data only consider "Climate change mitigation" and "Climate change adaptation" objectives.

Please note however, that as the taxonomy alignment reported for the Portfolio is incidental (as the Portfolio didn't have any taxonomy commitment) and the data availability for categorisation under article 9 of the Taxonomy is still low, the split between "Climate change mitigation" and "Climate change adaptation" is not provided for the purpose of this report. We are however committed in reporting this information as data improves.

To assess alignment with the EU Taxonomy, the third-party provider utilizes Taxonomy-alignment data, where available, either as reported directly by companies or derived from their disclosures. As of 31 December 2024, the third-party dataset covered approximately 12,500 companies, of which only about 1,500 (roughly 12%) reported their Taxonomy alignment. To address this reporting gap, the provider employs proprietary estimation methodologies. To qualify an activity as Taxonomy-aligned, the third-party provider uses proprietary research to determine whether the activity is Taxonomy-eligible and conducted in accordance with the relevant Technical Screening Criteria.

For the "Do No Significant Harm" (DNSH) assessment, the provider relies on controversy research and evaluates management indicators. The minimum safeguards assessment is conducted using proprietary screening based on the OECD Guidelines for Multinational Enterprises, the UN Global Compact, and underlying conventions and treaties.

Please note that as part of its internal process, the Man Data Science Data Management Team carried out regular manual and systematic data checks, through which ongoing data quality was monitored.

No additional assurance was provided by an auditor or third-party to check whether taxonomy-aligned investments were compliance with article 3 of the Taxonomy regulation.

¹¹ Delegated Regulation (EU) 2023/2486 of 27 June 2023

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹²?

☒ Yes:

☒ In fossil gas ☒ In nuclear energy

☐ No

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy.

¹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

These graphs represent 100% of the netted long exposure. Please note that EU Taxonomy alignment is not based on a percentage of the Portfolio's NAV but as a percentage of the sum of all issuers whose net long exposure was greater than 0% of NAV (Total Net Long Issuer Exposure) as recommended in SFDR Q&A JC 2022 62 dated 17 November 2022.

The Portfolio did not make investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Only reported data are considered for that purpose by the third-party provider.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

As at 31 December 2024, the share of investments¹³ made in transitional and enabling activities were as follows:

	Transition Aligned	Enabling Aligned
Turnover	0.01%	4.10%
CapEx	0.01%	2.37%
OpEx	0.01%	1.27%

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable - the Portfolio has not published periodic reports for previous reference periods.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Portfolio made 80.22% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of invested capital. The Portfolio made 40.83% of its total investments in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy when calculated as a percentage of net long exposure.

Since the Portfolio didn't have any minimum commitment to have sustainable investments in environmentally sustainable economic activities (taxonomy-aligned), this percentage is in line with the Portfolio's objective and investment policy.

What was the share of socially sustainable investments?

The Portfolio made 51.39% of its total investments in sustainable investments with a social objective when calculated as a percentage of invested capital. The Portfolio made 26.16% of its total investments in sustainable investments with a social objective when calculated as a percentage of net long exposure.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

The "#Other" investments made by the Portfolio included investments which did not match the Portfolio's ESG criteria in their entirety but had the adequate minimum safeguards, achieved through for example, exclusions at the outset, the integration of sustainability risk management and the application of good governance policies. Additionally, as disclosed in the prospectus, the Portfolio may have used investments for the purposes of efficient portfolio management, liquidity management and hedging purposes and these are not subject to minimum environmental or social

¹³ Daily notional Value

safeguards. The Portfolio may also have held cash and cash equivalents which are not subject to minimum environmental or social safeguards.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

During the reference period, the Investment Manager took the following actions in order to attain the environmental and social characteristics promoted by the Portfolio:

- extensive due diligence was carried out on investments both prior to investment and on an ongoing basis.
- potential investments were assessed using the SDG Framework, as described above;
- the good governance practices of investee companies were periodically monitored by the Investment Manager while the investment remained in the portfolio, in each case in accordance with the Investment Manager's due diligence policy;
- the Investment Manager also closely monitored investee companies on a continuous basis to ensure the maintenance of ESG credentials;

How did this financial product perform compared to the reference benchmark?

Not applicable – the Portfolio has not designated a specific index as a reference benchmark for the purposes of attaining the environmental or social characteristics by the Portfolio.

How does the reference benchmark differ from a broad market index?

Not applicable.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Not applicable.

How did this financial product perform compared with the reference benchmark?

Not applicable.

How did this financial product perform compared with the broad market index?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

EU Sustainable Finance Disclosure Regulation and Framework Regulation

With respect to the remainder of the Portfolios of Man Funds plc for which a periodic report has not been appended to the financial statements, these Portfolios do not have as their objective sustainable investment and do not promote environmental or social characteristics for the purposes of the Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (EU Sustainable Finance Disclosure Regulation or the “SFDR”). The Portfolios are, therefore, not subject to the additional disclosure requirements for financial products referred to in Article 8 or Article 9 SFDR. For the same reason, the Portfolios are not subject to the requirements of Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment (the “Framework Regulation”). The Portfolios’ investments do not take into account the EU criteria for environmentally sustainable economic activities.

1. Representative

The Representative in Switzerland is Man Investments AG, Huobstrasse 3, 8808 Pfäffikon.

2. Paying Agent

The Paying Agent in Switzerland is CACEIS Bank, Montrouge, Zurich Branch, Bleicherweg 7, 8027 Zürich.

3. Place, where the relevant documents can be obtained
