## American Franchise Fund

#### Summary of the Fund's investment objective and policy

The Fund aims to provide capital growth (to grow the value of your investment) over at least 5 years.

The Fund invests primarily (at least two-thirds) in the shares of USA companies (those incorporated in, domiciled in, or that have significant economic exposure to, the USA) and in related derivatives (financial contracts whose value is linked to the price of the shares of such USA companies).

The Fund focuses on investing in companies believed to be of high quality, which are typically associated with strong brands or franchises.

Investment opportunities are identified using in-depth analysis and research on individual companies.

The Fund may at times invest in a relatively small number of companies. These companies may be of any size and in any industry sector.

The Fund may also invest in other transferable securities, money market instruments, cash or near cash, deposits, up to 10% in units or shares in other funds (which may be managed by a Ninety One group company, or a third party) and derivatives.

Derivatives (financial contracts whose value is linked to the price of an underlying asset) may be used in order to achieve the Fund's investment objectives or with the aim of either managing the Fund risks or reducing the costs of managing the Fund.

The Fund is actively managed. This means the Investment Manager is free to select investments with the aim of achieving the Fund's objectives.

The S&P 500 Net Return Index is used for performance comparison. The Fund does not seek to replicate the index.

The Investment Association North America Sector (a peer group of broadly similar funds) average is an additional measure by which you can compare the Fund's performance.

#### Performance record

	6 months (%)
American Franchise Fund 'I' accumulation shares	6.64%*
Performance comparison index	16.02%**
Peer group sector average	12.66%**

Past performance is not a reliable indicator of future results, losses may be made.

#### American Franchise Fund (continued)

#### Performance

The Fund delivered a positive return over the period but underperformed its benchmark and peer group sector average.

#### Factors hindering performance

Stock selection in IT and health care were the biggest detractors at the sector level. Turning to individual stocks, not holding Nvidia, which was sold in February due to the stock becoming expensive, was the biggest headwind. Energy drinks company Monster Beverage slipped back mainly due to broader industry concerns about a slowing US market for energy drinks. The company's first-quarter results were solid, especially given weakness in other consumer names in the same reporting window. We remain invested.

Drinks company Diageo detracted after forecasting that first-half operating profit growth would decline compared with last year, primarily due to declining net sales in Latin America. Positively, we think volumes in the company's key regions reflect more normal levels and we also note that Latin America is small in the context of group profits (at about 8%), and thus remain invested.

Real estate analytics company CoStar has had a weak year-to-date, a period that contained little company-specific news. First-quarter results beat expectations, and the company significantly upgraded annual guidance for its Homes.com subsidiary. We believe the negative sentiment towards the shares to be overdone and remain invested.

#### Factors helping performance

Stock selection in communication services and positioning in consumer discretionary were the biggest contributors at the sector level. Turning to individual stocks, Alphabet has had a strong six months after the Google parent reported strong first-quarter sales, with the company's advertising and cloud businesses reporting accelerating growth. Facebook owner Meta was another contributor – we sold out of this position in February after it became too expensive.

Lithography equipment maker ASML contributed amid broadly positive sentiment towards the chip space during the quarter, underpinned by NVIDIA's bullish sales forecast. Its order book sits near all-time highs. Not holding Tesla and Apple also benefited the portfolio on a relative basis.

#### Portfolio activity

#### Significant purchases

We added to the existing position in consumer goods company Nestle following a period of share price weakness.

We added to the existing position in pet medicine company Zoetis following a period of weakness, particularly around the drugs Librela (and Solensia). We don't share these concerns and topped up after the shares fell on the back of a media article.

#### Significant Sales

We exited Nvidia due to an unclear outlook. Owning Nvidia at the current share price requires confidence in the medium-term growth trajectory, that we now find difficult to sustain.

Meta was an excellent portfolio holding since initiating a position in late 2017, however we must acknowledge the business has materially higher long-term tail/sustainability risks than a typical franchise stock. At the current valuation these do not appear to be appropriately considered by the market

We trimmed auto parts retailer O'Reilly after a period of strength.

#### American Franchise Fund (continued)

#### Outlook

As we move into the second half of 2024, the market's appetite for risk has continued to dominate. In the stock market, only a few sectors such as technology and communication services have performed strongly, but we need to look closer. While the IT sector within the S&P 500 Index is up close to 28% in the year through to the end of June, when we adjust for the size of the companies on an equal basis, the average technology stock has risen by half this level. Similar things are happening in the communication services sector. Overall, the S&P 500 Equal Weighted Index fell in the second quarter and is only up a little this year. This is very different from the double-digit return delivered by the market cap weighted S&P 500, which has been driven by a few very big stocks. A strong market driven by momentum, growth and cyclical factors has been a difficult environment for portfolios made of resilient quality companies. We still believe the headwinds facing the portfolio are temporary. Our holdings are doing well in terms of earnings and cash flow, and this is what drives long-term share price performance. There are some things that could change the momentum in this market towards more resilient fundamentals. While inflationary pressures are certainly easing, the market has changed its outlook for interest rates, which are expected to stay higher for longer. This will affect both businesses and consumers alike. We are seeing signs of moderation in the US economy, with analysts lowering earnings expectations year-to-date for the S&P 500 excluding the very big tech companies (Microsoft, Nvidia, Amazon, Google, Meta). In addition, there is some weakness in the US consumer; retail sales have weakened, and extra savings accumulated after the Covid pandemic have been used up.

In this situation, we believe that investors will pay more attention to solid business fundamentals (information that drives a company's valuation). Quality companies' earnings and cash flows should be more resilient through periods of uncertainty, offering portfolios a less volatile outcome. They are also well positioned for a higher-rate environment, given their balance sheets have less debt than the wider market. We are comfortable that the quality attributes we look for (lasting competitive advantages, dominant market positions, strong balance sheets, lower cyclicality, low capital intensity, sustainable cash generation and disciplined capital allocation) are all well suited both to current conditions and for uncertain times ahead. The companies we own have invested a lot to strengthen their business models, with significant exposure to key long-term trends such as cloud computing, artificial intelligence and data, payments and fintech, and health and beauty.

<sup>\*</sup>Source: Morningstar, total return, income reinvested, no initial charge, accumulation (acc) share class, net of fees in GBP.

<sup>\*\*</sup>Benchmark (S&P 500 NDR Index) and peer group sector average (Investment Association North America sector) shown for performance comparison purposes only.

The opinions expressed herein are as at end of June 2024.

#### American Franchise Fund (continued)

## Risk and reward profile\*

Lower risk Higher risk

Potentially lower rewards Potentially higher rewards

The value of your investment and any income from it can fall as well as rise and you are not certain of making profits; losses may be made.

Environmental, social or governance related risk events or factors, if they occur, could cause a negative impact on the value of the investments made by the Fund.

The Fund appears towards the higher end of the Risk and Reward Indicator scale. This is because the Fund invests in the shares of companies, whose values tend to fluctuate widely.

#### The following risks may not be fully captured by the Risk and Reward Indicator:

and may shift over time. The lowest category does not mean 'risk free'.

**Concentrated portfolio:** The portfolio invests in a relatively small number of individual holdings. This may mean wider fluctuations in value than more broadly invested portfolios.

**Currency exchange:** Changes in the relative values of different currencies may adversely affect the value of investments and any related income.

**Derivatives:** The use of derivatives is not intended to increase the overall level of risk. However, the use of derivatives may still lead to large changes in value and includes the potential for large financial loss. A counterparty to a derivative transaction may fail to meet its obligations which may also lead to a financial loss.

**Equity investment:** The value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. insolvency), the owners of their equity rank last in terms of any financial payment from that company.

**Geographic / Sector:** Investments may be primarily concentrated in specific countries, geographical regions and/or industry sectors. This may mean that in certain market conditions, the value of the portfolio may decrease whilst more broadly-invested portfolios might grow.

**Portfolio currency hedging:** Aims to protect investors from a decline in the value of the primary currencies of the underlying investments relative to the value of the share class currency, and investors will not benefit from an increase in the value of those currencies against the value of the share class currency. The costs of hedging emerging markets currencies can significantly lower hedged returns. Such hedging will not be perfect. Success is not assured.

**Style Bias:** The use of a specific investment style or philosophy can result in particular portfolio characteristics that are different to more broadly invested portfolios. These differences may mean that, in certain market conditions, the value of the portfolio may decrease while more broadly invested portfolios might grow.

<sup>\*</sup>The Risk and Reward profile is taken from the Key Investor Information Document. Please note that, the Risk and Reward profile section is based on Sterling 'I' Class Accumulation shares.

The full list of the Fund's risks are contained in Appendix VI of the Ninety One Funds Series Omnibus prospectus.

# Asia Pacific Franchise Fund

#### Summary of the Fund's investment objective and policy

The Fund aims to provide capital growth (to grow the value of your investment) over at least 5 years.

The Fund invests primarily (at least two-thirds) in the shares and in related derivatives (financial contracts whose value is linked to the price of such shares) of Asia Pacific ex Japan companies (those incorporated in, domiciled in, or that have significant economic exposure to Asia Pacific excluding Japan).

The Asia Pacific region, excluding Japan includes Australia, Hong Kong, Singapore, Malaysia, Thailand, Taiwan, South Korea, the Philippines, Indonesia, China, India, New Zealand and Vietnam.

The Fund focuses on investing in companies believed to be of high quality which are typically associated with strong brands or franchises.

Investment opportunities are identified using in-depth analysis and research on individual companies.

The Fund may at times invest in a relatively small number of companies. These companies may be of any size and in any industry sector.

The Fund may also invest in other transferable securities, money market instruments, cash or near cash, deposits, up to 10% in units or shares in other funds (which may be managed by a Ninety One group company, or a third party) and derivatives.

Derivatives (financial contracts whose value is linked to the price of an underlying asset) may be used in order to achieve the Fund's investment objectives or with the aim of either managing the Fund risks or reducing the costs of managing the Fund.

The Fund is actively managed. This means the Investment Manager is free to select investments with the aim of achieving the Fund's objectives. The MSCI AC Asia Pacific ex Japan Net Return Index is used for performance comparison. The Fund does not seek to replicate the index.

The Investment Association Asia Pacific excluding Japan Sector (a peer group of broadly similar funds) average is an additional measure by which you can compare the Fund's performance.

#### Performance record

	6 months (%)
Asia Pacific Franchise Fund '1' accumulation shares	8.00%*
Performance comparison index	10.67%**
Peer group sector average	8.09%**

Past performance is not a reliable indicator of future results, losses may be made.

#### Asia Pacific Franchise Fund (continued)

#### Performance

The Fund delivered a positive return over the period, marginally underperforming its benchmark and peer group sector average.

#### Factors helping performance

Exposure to the consumer services sector was the biggest contributor at the sector level. Sea, a leading e-commerce, online gaming and digital financial services company in Southeast Asia, outperformed on strong results in the first quarter across all of its businesses. In the consumer discretionary sector, Chinese online delivery company Meituan outperformed thanks to robust revenue growth from core local commerce and group-level profitability improvement. There were also signs of easing competition, evident in reduced subsidies and an increased take-rate (the money it makes on transactions) in Douyin's local service business.

In IT, chip maker TSMC outperformed after robust results in April and positive sentiment towards the chip space, underpinned by NVIDIA's bullish sales forecast. ASPEED, which designs server baseboard management controllers (BMCs), was another contributor, also on strong first quarter earnings and on indications of BMC inventory restocking, supporting a positive outlook for the business.

#### Factors hurting performance

At the sector level, stock selection in financials and IT detracted the most from relative returns. In financials, Chinese insurer AlA's shares slumped amid the sluggish recover in China's economy. Face-to-face insurance sales are often linked to GDP growth and consumer spending patterns, both of which are weak at present in China. The shares are now trading close to a valuation that implies little to no growth going forward. However, we believe the shares look attractive for those with a longer investment horizon.

Indonesia's Bank Rakyat's share price fell amid macro headwinds (including an unexpected interest-rate rise by the Indonesian central bank) and stock-specific concerns around asset quality within its loan book. We believe it has extensive experience in managing credit cycles (periods of tighter and looser borrowing and lending conditions in the economy) and an approach to lending that prioritises customer relationships, which could help mitigate some of the short-term headwinds.

In IT, construction cost management software provider Glodon underperformed following weaker-than-expected growth and profitability, in addition to negative sentiment towards China. Management remains confident in the structural-growth opportunity and is continuing to invest in sales & marketing and R&D, while rationalising costs. We believe Glodon is well placed to deliver strong growth and profitability over the long-term.

#### Portfolio activity

#### Significant purchases

We added to Glodon as we see substantial upside. The shares are only pricing its digital cost business, which is the most mature part of the company, essentially giving investors all other growth opportunities for free, including digital construction. The size of the position and the contribution to active risk (the risk taken by the fund in seeking to beat its benchmark) was too low relative to upside potential and our conviction.

Delta Electronics underperformance gave us an opportunity to add to the position. There was no material change in fundamentals.

Following further research on Sea's competitive advantage and a positive meeting with management, we added to the position.

#### Asia Pacific Franchise Fund (continued)

#### Significant sales

We trimmed TSMC and Nubank following strong performance.

We reduced our holding in Tencent as we see better structural growth opportunities (drivers relating to the workings of an economy such as resource availability) elsewhere. We believe there is potential for increased profits but the high-profile nature of the company is likely to prevent this being fully realised in the share price.

#### Outlook

As an investment team, we continue to see sustainability being increasingly priced into the market, creating a wide and growing opportunity set for active, focused investors. The decade ahead will be critical for addressing a broad range of sustainability opportunities and challenges – arguably, especially in emerging markets – presenting investors with potential to both generate returns and allocate to companies that are contributing to positive social and environmental outcomes.

Through a sustainable approach, we believe investors can align portfolios with structural transformations taking place in emerging markets with the potential to drive growth and profits for businesses. Given their lower levels of economic development, emerging markets offer many underserved investment opportunities – particularly as the demand for certain goods and services increases as individuals become wealthier.

The drivers of structural growth in emerging markets include rising demand for climate-change solutions, financial and digital inclusion, and sustainable consumption, among other things. We believe companies that can capture these opportunities in a sustainable way are less exposed to regulatory sanctions, reputational risk, consumer opposition, talent loss and other threats to their long-term success – making them more likely to be tomorrow's leaders.

As an investment team, our focus remains firstly on applying a research process that can identify companies exposed to structural change and that is designed to evaluate sustainability, and vice versa. Secondly, in order to assess the value created by companies in a way that works across most industries, regions and type of economy, we analyse the economic value added. Finally, making progress on sustainability takes time and requires purposeful and ongoing engagement.

Looking ahead, we regard the valuations of our companies as generally attractive and the structural growth drivers to which they are exposed as strong. We think our forward-looking, fundamental approach and high-conviction, focused portfolio leaves us well placed to capture the sustainable investment opportunity which – in our view – is very substantial and still largely untapped when looking over a long-term time horizon (5 years+).

# Global Strategic Equity Fund

#### Summary of the Fund's investment objective and policy

The Fund aims to provide capital growth (to grow the value of your investment) over at least 5 years.

The Fund invests primarily (at least two-thirds) in the shares of companies around the world and in related derivatives (financial contracts whose value is linked to the price of the shares of such companies).

The Fund focuses on investing in companies expected to become more profitable due to operational and/or structural improvements.

Investment opportunities are identified using in-depth analysis and research on individual companies.

These companies may be of any size and in any industry sector.

The Fund may also invests in other transferable securities, money market instruments, cash or near cash, deposits, up to 10% in units or shares in other funds (which may be managed by a Ninety One group company, or a third party) and derivatives. Derivatives (financial contracts whose value is linked to the price of an underlying asset) may be used in order to achieve the Fund's investment objectives or with the aim of either managing the Fund risks or reducing the costs of managing the Fund.

The Fund is actively managed. This means the Investment Manager is free to select investments with the aim of achieving the Fund's objectives. The MSCI AC World Net Return Index is used for performance comparison and risk management. The Fund does not seek to replicate the index.

The Investment Association Global Sector (a peer group of broadly similar funds) average is an additional measure by which you can compare the Fund's performance.

#### Performance record

	6 months (%)
Global Strategic Equity Fund 'I' accumulation shares	16.11%*
Performance comparison index	12.24%**
Peer group sector average	8.68%**

Past performance is not a reliable indicator of future results, losses may be made.

#### Performance

The Fund delivered a positive return over the period and outperformed its benchmark and peer group sector average.

#### Factors helping performance

Stock selection overall was a significant positive and managed to offset the negative from allocation.

Stock selection in the consumer discretionary sector was the key driver of returns, supported by information technology. Within IT, Al-related stocks continued to ride a wave of optimism, with TSMC, SK hynix and Broadcom all among the leading contributors to relative performance. South Korean semiconductor giant SK hynix continued to surge on improving conditions in the memory market and healthy pipeline given significant orders from Nvidia and AMD. Broadcom outperformed on better-than-expected results, with an increase in company forecasts across both Al semiconductors and software. Similarly, TSMC continued to find favour from strong results and signs of better earnings momentum, while the commencement of 3nm chips for Intel recently in June provided another shot in the arm for the share price.

In energy, the active overweight in oil supermajor ExxonMobil was among the top performers, helped by stronger oil prices over the period. In communication services, TKO Group did well after reporting higher-than-expected results and giving an outlook showing that strong operating trends look set to continue.

In financials, Japanese bank Resona added positively to returns as Japanese banks benefited from a move toward policy normalisation by the Bank of Japan, while more recently announcements signalling a commitment to shareholder value, and a positive earnings update and guidance for Full Year 2024 have been an additional tailwind to the shares.

#### Factors hindering performance

More negatively, stock picking in consumer staples was the biggest detractor from performance. Chinese high-end baiju producer Kweichow Moutai was among the biggest drags on performance as the shares suffered from broad weakness in Chinese consumer demand, and have since de-rated alongside the sector. Leading healthcare insurer UnitedHealth Group also weighed on returns as the share retreated following news that the regulator was investigating the company's monopolistic market position, while not holding Eli Lilly also weighed on relative performance.

In IT, global professional services company Accenture, was the biggest detractor from performance over the period, on weaker fiscal year guidance, tighter IT budgets and pressure on discretionary projects. We have since exited the position. Not owning Meta Platforms also hurt relative performance over the period.

#### Portfolio activity

#### Significant purchases

Pharma company Johnson & Johnson has traded at an attractive valuation for years but has underperformed due to scepticism about management's revenue guidance and concerns over ongoing talc litigation. However, two factors suggest this market view could change; 1) analysis of the drug pipeline indicates potential revenue above consensus and closer to management's guidance, and 2) the company's recent proposal to resolve talc litigation has a material chance of success. Notwithstanding the uncertainties, we believe these factors combined with the current valuation present a very attractive risk/reward opportunity.

We bought gaming company Nintendo as the anticipated shift in product mix towards the Switch 2 cycle and the concurrent rise in third-party software sales have not been adequately accounted for in the prevailing market forecasts, nor have they been factored into the current stock valuation. Coupled with the ongoing reforms across Japan Inc., this oversight further amplifies the potential for a more advantageous distribution of capital, stemming from a balance sheet that is excessively capitalised.

#### Significant sales

We downgraded Citi to medium conviction and have been reducing our stake over the year to date following the robust rally in US banks during that some period. From here, we identify a sharp increase in credit card defaults among several worries for Citi. Given the sharp rally this year, the upside potential in the share price has reduced, and we have higher conviction ideas elsewhere.

We exited AIA due to declining margins and ongoing degradation in the quality of value of new business (VNB). We have rotated this exposure into rival Ping An so as to maintain our exposure to insurance demand and a broader recovery in Chinese equities.

#### Outlook

We believe we shall see higher and more volatile inflation moving forwards, which will result in similarly sized interest rate moves to combat the effects. So far this year, economic growth has been sufficient for the market to take heart from a path to lower inflation and interest rates. These easier financial conditions, low leverage (debt) and lower inflation have all contributed to ongoing outperformance from technology stocks, in particular semiconductors – the key growth sector benefiting from the build out of the datacentres needed to support Al developments.

While some elements of US inflation have remained high, against a backdrop of slowing wage growth and softer rent increases, the most recent data opens the door to interest rate cuts in the coming months. In Europe, we saw a first ECB rate cut in June.

A stuttering Chinese recovery, with still weak Chinese consumption has seen an earlier stock market rally give back all its gains. There is now hope that China's Third Plenum (macroeconomic policy setting meeting) later in July will provide some improved Chinese policy for the coming five years. The UK and Japan have emerged from technical recessions and are showing better growth potential. In particular, a combination of increased shareholder activism, rising wage inflation and improving confidence in Japan are providing an investment opportunity.

The Russia / Ukraine crisis, the threat of escalation in the Middle East, and the possibility of tensions in the Taiwan Strait ensure geopolitical risks remain high – all of which can produce oil price volatility and fast changing inflation and rate expectations. However, it is the elections globally which are taking centre stage for now, with India, Mexico, France and UK all seeing either new leadership emerging or existing leadership seeing their mandates change as the electorate vote against the incumbent 'elite'. Most importantly for us, the US elections now sees the market trying to price the odds for the next President - where the consensus is that Trump will likely win.

This complex macroeconomic picture is the reason we continue to advocate a balanced approach to portfolios today, through our multi-factor process with a strong emphasis on stock selection and being nimble rather than either stylistically biased or beholden to thematic growth narratives – regionally, sectorally, or otherwise.

Market indices reveal a continuing high concentration in the largest US technology stocks with the strongest balance sheets and structural growth drivers. The enthusiasm for AI related investments has shown no signs of abating, although we are aware that any disappointment can result in share price volatility, despite the obvious long term growth opportunity. Our investment process is designed to help us navigate such inflections using our alpha model with associated fundamental analysis to focus on the latest trends as they emerge.

# Global Total Return Credit Fund

#### Summary of the Fund's investment objective and policy

The Fund aims to provide total returns comprised of income and capital growth (to grow the value of your investment) over at least a full credit cycle (this objective may be measured over at least 5 years).

The Fund targets a positive return of Overnight SONIA +4% before fees over a full credit cycle (which may be measured over 5-year rolling periods).

While the Fund aims to achieve a positive return and its performance target, there is no guarantee that either will be achieved over the full credit cycle, or over any period of time, and there is a risk of loss.

A credit cycle means the economic conditions over which the cost of borrowing initially increases, then decreases and then stabilises. Credit cycles can vary in length and typically last between 3 and 7 years.

The Fund invests primarily (at least two-thirds) in bonds (or similar debt based assets) issued by borrowers around the world (including but not limited to emerging markets) and in related derivatives (financial contracts whose value is linked to the price of such bonds (or similar debt-based assets)).

These bonds (or similar debt-based assets) may be denominated in any currency, have any credit rating or be unrated, and may be issued by any borrower e.g. governments or companies. They may also have a fixed or floating rate and/or coupon, and may be of any duration (measures the sensitivity of the value of bonds (or similar debt-based assets) to change in interest rates).

The Fund may invest up to 20% of its assets in structured credit instruments (assets whose value and level of income payments depend on the underlying assets held by/for the business that issues them).

The Fund may also invest in other transferable securities, money market instruments, cash or near cash, deposits, up to 10% in units or shares in other funds (which may be managed by a Ninety One group company, or a third party) and derivatives.

Derivatives (financial contracts whose value is linked to the price of an underlying asset) may be used for investment purposes (i.e. in order to achieve the Fund's investment objectives) or for efficient portfolio management purposes e.g. with the aim of either managing the Fund risks or reducing the costs of managing the Fund.

The Fund is actively managed. This means the Investment Manager is free to select investments with the aim of achieving the Fund's objectives.

The Fund cannot replicate the target benchmark index. The benchmark index is not investable and therefore cannot be replicated.

The Investment Association £ Strategic Bond Sector (a peer group of broadly similar funds) average is an additional measure by which you can compare the Fund's performance.

#### Global Total Return Credit Fund (continued)

#### Performance record

	6 months (%)
Global Total Return Credit Fund 'I' accumulation shares	3.24%*
Performance comparison index	4.58%**
Peer group sector average	1.45%**

Past performance is not a reliable indicator of future results, losses may be made.

#### Total deemed income distributions per 'l' accumulation shares

6 Months to 30 June 2024	2.97 pence
6 Months to 30 June 2023	2.77 pence

#### Performance

The Fund delivered a positive return over the period, underperforming its 'cash-plus' benchmark but outperforming the peer group sector average.

#### Factors helping performance

From an asset class perspective, exposure to the structured credit market (i.e., collateralised loan obligations\*) drove performance. These assets have floating-rate interest payments, which protected investors from the rise in interest rates; their attractive carry (income) also helped performance.

Other contributors to performance included corporate hybrids (bonds that combine debt and equity characteristics) and bank capital bonds (AT1s). Real-estate issuers' bonds in the former enjoyed a strong rally during the first quarter, while bank capital continued its positive run, benefiting from strong investor demand.

#### Factors hindering performance

Detractors from performance were modest overall, but included exposure to US high-yield bonds, where some company specific headlines weighed on performance.

From a sector perspective, exposure to capital goods detracted from performance.

#### Portfolio activity

#### Significant purchases

We continued to increase our structured credit market exposure, as the asset class's value relative to traditional corporate debt remains enticing.

On a sector basis, banks continue to offer attractive opportunities, in our view, particularly in shorter-duration instruments which are less sensitive to interest rate changes. We increased exposure there.

We continued to increase exposure to European investment-grade bonds, given their attractive valuations relative to both US investment-grade debt and European high-yield debt.

<sup>\*</sup>CLOs are bonds that are backed by pools of (typically below investment grade) corporate loans. Several bonds of varying risk and return characteristics are usually issued against each pool of loans. Lower-risk, 'senior' tranches have higher priority claims on the cash flows from the loans but offer a lower yield than the lower-rated 'junior' tranches, which are the first to suffer losses if the underlying loans underperform.

#### Global Total Return Credit Fund (continued)

#### Significant sales

We reduced the portfolio's traditional high-yield debt exposure as spreads look especially tight with little difference between the bid and offer prices, creating unattractive valuations.

Within investment-grade markets, we reduced exposure in US non-financial bonds as spreads have reached particularly tight (expensive) levels.

#### Outlook

Amid a great deal of uncertainty around global economic growth, inflation trends and the behaviour of central banks, the strong recovery of credit markets has continued. Markets now appear convinced about the prospect of a 'soft landing' for the US economy, with the US Federal Reserve (the 'Fed') seemingly reaching a turning point in the interest rate cycle and economic data remaining robust. However, we continue to believe the road ahead is likely to remain bumpy – credit-market valuations are likely to remain volatile and the decline in government bond yields is unlikely to be smooth. We have already seen this play out over the start of the year, with expectations of interest rate cuts from the Fed pushed to much later in the year. This environment should ultimately create opportunities for the flexible and dynamic manager.

While market technicals – such as supply/demand dynamics, fund flows, and interest-rate volatility – have been key factors driving markets for the past year, we believe company fundamentals (i.e., corporate health/strength) will increasingly come to the fore. Corporate fundamentals are generally starting from a position of strength, with reasonable leverage (the amount of debt a company is carrying) levels and strong interest coverage all features across large parts of the credit market. As macroeconomic conditions weaken, we will inevitably see an increase in default rates, but we believe this rise is likely to be less pronounced than in previous recessions given the factors mentioned above. That said, in an environment where default rates are rising, idiosyncratic (company-specific) credit risk abounds.

More broadly, yields remain elevated compared to history, offering investors compelling valuations and a dramatically improved income profile relative to recent history. Not only does this higher level of income mark a shift in regime for investors who have been starved of yield for many years – boding well for the outlook for asset-class demand – it also has historically shown itself to be a source of higher quality and less volatile returns for credit investors. Furthermore, higher yields also typically provide a buffer to absorb further market stresses. While credit spreads have compressed, dispersion is relatively high; this creates compelling bottom-up opportunities for investors that follow flexible and dynamic approaches. As the market begins to discriminate between issuer fundamentals, sector dispersion in credit markets will likely increase further.

We have continued to pivot the portfolio towards higher carry (higher income) holdings such as structured credit, loans, and selective parts of the short-duration high-yield and bank capital markets, given their attractive income profile and favourable downside characteristics. At the same time, we have reduced exposure to bonds whose spreads are nearing their tightest (lowest) level in history; we believe these offer limited potential for further price appreciation or attractive income. This has been most apparent in parts of the high-yield market and select positions in the investment-grade rated bond market, particularly in the US.

## Risk and reward profile\*

Lower risk
Potentially lower rewards
Potentially higher rewards

1 2 3 4 5 6 7

This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The risk and reward category shown is not guaranteed to remain unchanged and may shift over time. The lowest category does not mean 'risk free'.

The value of your investment and any income from it can fall as well as rise and you are not certain of making profits; losses may be made.

Environmental, social or governance related risk events or factors, if they occur, could cause a negative impact on the value of the investments made by the Fund.

The Fund appears towards the middle of the Risk and Reward Indicator scale. This is because it invests in bonds whose returns tend to fluctuate more than those of cash funds but less than those of funds which invest in the shares of companies.

#### The following risks may not be fully captured by the Risk and Reward Indicator:

**Default:** There is a risk that the issuers of fixed income investments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The worse the credit quality of the issuer, the greater the risk of default and therefore investment loss.

**Derivatives:** The use of derivatives may increase overall risk by magnifying the effect of both gains and losses leading to large changes in value and potentially large financial loss. A counterparty to a derivative transaction may fail to meet its obligations which may also lead to a financial loss.

**Government securities exposure:** The Fund may invest more than 35% of its assets in securities issued or guaranteed by a permitted sovereign entity, as defined in the definitions section of the Fund's prospectus.

**Interest rate:** The value of fixed income investments (e.g. bonds) tends to decrease when interest rates rise.

**Liquidity:** There may be insufficient buyers or sellers of particular investments giving rise to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than might be anticipated.

<sup>\*</sup>The Risk and Reward profile is taken from the Key Investor Information Document. Please note that, the Risk and Reward profile section is based on Sterling 'I' Class Accumulation shares.

The full list of the Fund's risks are contained in Appendix VI of the Ninety One Funds Series Omnibus prospectus.

<sup>^</sup> Including derivative liabilities.
\*The net other assets figure includes any bank or short term cash deposits.

<sup>\*\*</sup>Bond still trading.

Securities shown as FRNs represent Floating Rate Notes - debt instruments that pay a floating rate of interest, usually based on an accepted market benchmark rate such as SONIA.

Fixed interest securities are traded on a regulated market, unless otherwise stated.

The collective investment schemes investments, interest rate swaps, total return swaps and the forward foreign exchange contracts are not listed.

# Authorised Corporate Director's Report

#### **Authorised Corporate Director's report**

The Authorised Corporate Director (the "ACD") of Ninety One Funds Series ii (the "Company") is Ninety One Fund Managers UK Limited. The ACD is the sole director of the Company.

#### Authorised status

The Company is an investment company with variable capital incorporated in England and Wales under registered number IC125 and authorised by the Financial Conduct Authority (the "FCA") with effect from 7 September 2001

The Company is structured as an umbrella company in that different sub-funds (the "Funds") may be established from time to time by the ACD with the approval of the FCA. The Company currently comprises four Funds.

The Company (and therefore the Funds) has been certified by the FCA as complying with the FCA Collective Investment Scheme ("COLL") Sourcebook and the Collective Investment Schemes (Amendment etc) (EU Exit) Regulations 2019 No.325 including any amendments or updates made in relation thereto. The Company has an unlimited duration.

The assets of each Fund will be treated as separate from those of every other Fund and will be invested in accordance with the investment objective and policy applicable to that Fund. Investment of the assets of each of the Funds must comply with the investment objective and policy of the relevant Fund.

Under English law, the Funds are segregated portfolios of assets and the assets of a Fund belong exclusively to that Fund. The assets of a Fund shall not be used or made available to discharge (directly or indirectly) the liabilities of, or claims against, any other person or body, including the Company and any other Fund and shall not be available for any such purpose.

Subject to the above, each Fund will be charged with the liabilities, expenses, costs and charges of the Company attributable to that Fund, and within each Fund charges will be allocated between share classes in accordance with their terms of issue. Any assets, liabilities, expenses, costs or charges not attributable to a particular Fund may be allocated by the ACD in a manner which it believes is fair to the shareholders generally. This will normally be pro rata to the net asset value of the relevant Funds. Shareholders are not liable for the debts of the Company.

#### Accounting period covered by these accounts

The accounting period covered in these accounts is from 1 January 2024 to 30 June 2024.

#### Changes during the accounting period

#### Changes made following required notice:

After consultation with the Depositary and in accordance with the requirements of Section 4.3 of COLL, shareholders were given notice of the following:

There were no fundamental changes to the Funds that required shareholder approval and nor were there any significant changes to the operation of the Funds requiring pre-notification.

#### **Authorised Corporate Director's Report (continued)**

#### Share class closures

American Franchise Fund, S, Accumulation, USD closed on 14 June 2024

#### Other changes made:

On 8 April 2024, the prospectus was updated to reflect the following:

- a. annual updates pertaining to tax information and performance figures; and
- b. other general updates.

There were no other material changes made during the period under review.

#### Equalisation

Equalisation applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of all Group 2 shares and is refunded to holders of these shares as a return of capital. Being capital, it is not liable to income tax but must be deducted from the cost of shares for capital gains tax purposes.

## Securities Financing Transactions ('SFT's') (Unaudited)

As at 30 June 2024

The funds did not hold any total return swaps as at 30 June 2024. The funds did not engage in securities lending, repurchase agreement and reverse repurchase agreement transcriptions during the financial period.

# Climate related disclosures

Taskforce for Climate-Related Disclosures (TCFD) framework and recommended disclosures can be found in Ninety One's Integrated Annual Report, where it is explained how Ninety One at a firm-level aligns to the recommended TCFD requirements.

The report can be found at 91-ninety-one-integrated-annual-report-2024.pdf (ninetyone.com).

## Other information

#### ISA status

During the period under review, the shares of the funds met the requirements for eligibility to be held in a stocks and shares ISA as determined by the regulations which govern ISAs.

Ninety One Fund Managers Limited offer the 'A' shares of the funds through its own ISA plan.

#### **Distributions**

Where a distribution is to be paid, it has been calculated as at 30 June 2024 and will be distributed to shareholders, where applicable, on 31 August 2024. For accumulations shares income distribution payments are deemed to be paid on 31 August 2024.

#### Telephone calls

Telephone calls may be recorded for training and quality assurance purposes.

#### Cross holding table

There were no cross holdings between sub-funds in Ninety One Funds Series ii as at 30 June 2024.

# Glossary

#### Active management

An active investment approach is one where a portfolio manager aims to beat the market through research, analysis and his/her judgement. (See also passive management).

#### Asset allocation

A fund's allotment to different asset classes.

#### Asset class

The main types of investment available. The traditional asset classes are equities, bonds and cash.

#### Bear market

A market where prices fall consistently over a long period of time. Investors are referred to as 'bearish' if they believe prices are going to fall.

#### **Benchmark**

A comparative performance index.

#### **Bond**

A form of loan issued by a government or company. Typically, an investor should receive a regular coupon and the return of the principal originally lent when the bond matures.

Note: Not all bonds are interest bearing (see zero coupon bond), and not all bonds are fixed rate (e.g. index linked, floating rate and stepped rate bonds).

#### Bottom-up investing

An investment approach that concentrates on the analysis of individual companies and considers the company's history, management and potential as more important than macroeconomic trends.

#### **Bull market**

A market where prices rise consistently over a long period of time. Investors are referred to as 'bullish' if they believe prices are going to rise.

#### Cash

The most liquid form in which to store capital. While it is regarded as a safe asset class, over time the purchasing power of cash tends to be eroded by inflation.

#### Central bank base rate

The basic rate of interest set by a central bank that determines the cost of borrowing.

#### Commodities

An asset class which comprises physical assets such as oil, base and precious metals and agricultural produce.

#### Credit rating agency

An institution that assigns credit ratings to debt issuers, such as companies and governments. Standard & Poor's and Moody's are well-known examples.

#### Credit risk

The risk that a bond issuer or borrower will be unable to meet their contractual obligations.

#### Credit spread

The differences in yield between 'risk-free' bonds, such as gilts or US treasuries, and non-treasury (or gilt) bonds, which are identical in all respects except for the quality of their rating. Corporate bonds tend to offer additional yield to compensate investors for the potential risk of default.

#### Currency risk

The risk of incurring losses of foreign assets due to adverse movements in exchange rates between domestic and foreign currencies.

#### Deflation

As opposed to inflation, it describes conditions in which there is a widespread, consistent decline in prices. It conveys the rarer occurrence of the money in one's pocket actually increasing in buying power, rather than the more usual opposite.

#### Glossary (continued)

#### **Derivatives**

An instrument whose value depends on the performance of an underlying security or rate which requires no initial exchange of principal. Options, futures and swaps are all examples of derivatives.

#### **Developed markets**

Refers to industrialised countries with relatively high levels of economic productivity, high standards of living and stable economies.

#### Disinflation

Refers to a slowing down in price growth, as opposed to deflation where prices are already falling.

#### Diversification

Holding a range of assets to reduce risk.

#### Dividend

The portion of company net profits paid out to shareholders.

#### Dividend yield

The annual dividend per share divided by the current share price.

#### Duration

A measure of a bond investment's sensitivity to changes in interest rates. The longer the duration, the more sensitive it is. Calculating 'duration' for a fixed income investment such as a bond is a complicated sum. It takes into account the current value of the bond, the coupon or interest payment, the book cost, and the number of years the bond has left to run. Put simply, the higher the duration number the higher the potential return (and the greater the risk).

#### **Emerging markets**

Countries in the process of industrialising which tend to have rapidly growing economies.

#### **Emerging market debt**

Debt issued by governments and corporates in emerging markets.

#### **Equity**

Refers to shares. A share in a company provides an investor with part ownership of that company.

#### **Fixed income**

An investment that provides a return in the form of fixed periodic payments and the eventual return of principal at maturity.

#### Future

An obligation to buy or sell an asset on a specific date in the future at an agreed price.

#### Gilt

A bond that is issued by the British government which is generally considered low risk. Bonds issued by South African and Irish governments are also referred to as gilts.

#### Hedging

A technique seeking to offset or minimise the exposure to specific risk by entering an opposing position.

#### High yield bond

A below investment grade rated bond, providing the investor with greater returns due to its higher default risk. (See Junk bond).

#### Index-linked bonds

Bonds whose coupons and principal payment are linked to movements in inflation.

#### Inflation

Describes conditions in which there have been a consistent rise in prices.

#### Initial public offering (IPO)

The first public sale of a company's equity resulting in a quoted stock price on a stock exchange.

#### Interest

The return earned on funds which have been deposited, loaned, or invested.

#### Glossary (continued)

#### Investment grade bonds

Bonds considered of the highest quality by credit rating agencies. The threshold credit rating for Standard & Poor's is BBB and Baa3 for Moody's.

#### Liabilities

Financial obligations that must be met.

#### Liquidity

The ease with which an asset can be sold at a reasonable price for cash.

#### Long dated bond

A bond with usually 15 years or more remaining before redemption, at which point the principal is paid to the holder.

#### Long-term investment

Holding an asset for an extended period of time. Depending on the security, a long-term asset can be held for as little as one year or for as long as 30 years.

#### Macroeconomic

Refers to the big trends in an economy as a whole, such as inflation and unemployment, while microeconomic forces refer to the factors affecting individual situations or companies.

#### Market capitalisation

The total value of a company's equity, calculated by the number of shares multiplied by their market price.

#### Maturity

With regards to bonds, maturity refers to the time at which the principal of the bond is repayable and it ceases to exist. In terms of a pension fund, it conveys the average age of the membership and the time until benefits are payable.

#### Outperformance

The return of a fund in excess of the comparative performance index.

#### Overweight

When a fund has greater exposure to an asset than the comparative performance index.

#### Peer group

A group of funds that can be compared with one another for performance purposes. A peer group will usually be based on the funds' investment scope, for example UK equities.

#### Performance

The results of an investment over a given period.

#### **Portfolio**

A grouping of financial assets, such as equities, bonds and cash equivalents. Portfolios are held directly by investors and/or managed by financial professionals.

#### Rally

A swift rise.

#### Real estate

An asset class comprising buildings and land.

#### Risk premium

The extra return expected by an investor in compensation for holding a risky asset.

#### Security

A general term for a tradable financial instrument.

#### **Short-term investment**

Investments that are held for or mature in 12 months or less.

#### Standard deviation

A measure of risk, deriving from the historic volatility of a particular asset.

#### Top-down investing

Contrasting with bottom-up analysis, a top-down approach to investment analysis begins with an assessment of macroeconomic factors, then business cycles before moving on to look at individual sectors and companies.

#### Treasuries

Debt securities issued by the US government. Treasuries fall under three categories: treasury bills (T-bills), treasury notes (T-notes) and treasury bonds (T-bonds).

#### Glossary (continued)

#### Underweight

When a fund has less exposure to an asset than the benchmark.

#### Volatility

Price movements. Standard deviation is a measure of an asset's historic volatility.

#### Year-to-date (YTD)

Refers to the period extending from the beginning of the current calendar year to the present date.

#### Yield

A measure of the income return earned on an investment. In the case of a share the yield expresses the annual dividend payment as the percentage of the market price of the share. In the case of a property, it is the rental income as a percentage of the capital value. In the case of a bond the running yield (or flat or current yield) is the annual interest payable as a percentage of the current market price. The redemption yield (or yield to maturity) allows for any gain or loss of capital which will be realised at the maturity date.

#### Yield curve

A graphical representation off all the yields of bonds of the same quality with maturities ranging from the shortest to the longest available.

#### Yield spread

The difference in yield between different bonds.

#### Yield to maturity

The annualised return (internal rate of return) that would be earned on a bond if held to maturity.
